The gods had chosen the Domdur to rule the world, and had chosen Malledd to be their champion among the Domdur. They had not asked Malledd whether he wanted the job. Now a wizard has raised an army of the undead to overthrow the Domdur Empire, and the world awaits the divine champion who is to save them -- but will Malledd come? And if he does, can he be the savior the Domdur expect, or has the gods' favor turned elsewhere?

which explored a framework for understanding the nature of these skills. The major element of this new volume is the presentation of research information from the global assessment of two 21st century skills that are amenable to teaching and learning: collaborative problem solving, and learning in digital networks. The outcomes presented include evidence to support the validity of assessment of 21st century skills and descriptions of consequent pedagogical approaches which can be used both to teach the skills and to use them to enhance key

learning goals in secondary education systems. The sections of the volume are connected through a focus on the degree to which innovative assessment tasks measure the constructs of interest. This focus is informed by conceptual and methodological issues associated with affordances of 21st century computer-based assessment. How understanding of the nature of the skills, as derived from these assessments, can guide approaches to the integration of 21st century skills in the classroom, is informed by initiatives adopted by participating countries. The cultural-test-bias hypothesis is one of the most important scientific questions facing psychology today. Briefly, the cultural-test-bias hypothesis contends that all observed group differences in mental test scores are due to a built-in cultural bias of the tests themselves; that is, group score differences are an artifact of current psychometric methodology. If the cultural-test-bias hypothesis is ultimately shown to be correct, then the 100 years or so of psychological research on human differences (or differential psychology, the scientific discipline underlying all applied areas of human psychology including clinical, counseling, school, and industrial

psychology) must be reexamined and perhaps dismissed as confounded, contaminated, or otherwise artifactual. In order to continue its existence as a scientific discipline, psychology must confront the cultural-test-bias hypothesis from the solid foundations of data and theory and must not allow the resolution of this issue to occur solely within (and to be determined by) the political Zeitgeist of the times or any singular work, no matter how comprehensive. In his recent volume *Bias in Mental Testing* (New York: Free Press, 1980), Arthur Jensen provided a thorough review of most of the empirical research relevant to the evaluation of cultural bias in psychological and educational tests that was available at the time that his book was prepared. Nevertheless, Jensen presented only one perspective on those issues in a volume intended not only for the scientific community but for intelligent laypeople as
