This work presents a unified theory of aspect within Universal Grammar. It provides an unusual combination of syntactic, semantic, and pragmatic approaches to a single domain, and gives detailed linguistic analyses of five languages with very different aspectual systems: English, French, Mandarin Chinese, Navajo and Russian. This second edition has been completely revised to include further development of the two-component theory, including new treatments of boundedness, dynamism and a general account of aspectual shifts. It includes syntactic and semantic tests.

This volume brings together current research by international scholars on the varieties of English spoken in Ireland. The papers apply contemporary theoretical and methodological approaches and frameworks to a range of topics. A number of papers explore the distribution of linguistic features in Irish English, including the evolution of linguistic structures in Irish English and linguistic change in progress, employing broadly quantitative sociolinguistic approaches. Pragmatic features of Irish English are explored through corpus linguistics-based analysis. The construction of linguistic corpora using written and recorded material form the focus of other papers, extending and analyzing the growing range of corpus material available to researchers of varieties of English, including diaspora varieties. Issues of language and identity in contemporary Ireland are explored in several contributions using both qualitative and quantitative methods. The volume will be of interest to linguists generally, and to scholars with an interest in varieties of English.

occurred in the textbooks of medieval logicians. Hubien (1975,1977) did the same in recent articles and other modern logicians with interest in the history of their field of knowledge, or students of the history of logic with knowledge of modern achievements in this field, could be mentioned. For example, Trentman (1977:41) in his recent edition of Vincent Ferrer's Tractatus de Suppositionibus, 'Treatise on suppositions', elucidates Ferrer's theory of natural supposition with the aid of modern logic and points out that in some respects, for example, in the theory of irtensionality, modern theories have been developed with little more success. In the Middle Ages, semantics and logic were entirely interwoven. For, in the opinion of medieval philosophers, thought is enacted in language. This very same language consists of meaningful entities and those entities form propositions that may be used as premisses in argument. In their opinion, language and thought were both related to reality in a natural way (cf. De Rijk, 1977:233). This is also evident from Marsilius' works (cf., e.g., p. 54, n. 11-23). The semantical presuppositions oT the propositions that may be used in arguments, are analysed. This, indeed, is one of the contributions to logic by medieval logicians (cf. Moody, 1975:385).

The Navajo Verb

In Navajo, numerous prefixes combine with verb roots to form single words that, in English translation, require a phrase or even a sentence to convey their meaning. Therefore, verb stems and prefixes must be mastered piece by piece to understand the language. This volume leads the reader carefully and systematically through the complexities of the Navajo verb system. By doing so, the book makes Navajo more accessible to all those interested in the American Indian language with the largest number of speakers in the United States.

The Radical Autonomy of Syntax

Irrespective of the language (first, second, or foreign) taught, knowledge of linguistics and its application is a must for language teachers. However, most TESOL programs use general linguistics textbooks that deal with the science of linguistics (as theory), disregarding its implications (practice) for teaching English language learners. Applied Linguistics for Teachers of Culturally and Linguistically Diverse Learners is an essential scholarly publication that seeks to contribute to TESOL and language teacher education programs in order to assist educators to apply their knowledge to help linguistically and culturally diverse learners succeed in school and life. Highlighting an array of topics such as bilingualism, morphology, and sociolinguistics, this book is ideal for educators, educational programs, professionals, academicians, professors, linguists, and students.

Morphosyntactic Expression in Functional Grammar Walter de Gruyter

In the last few years categorial grammars have been the focus of dramatically expanded interest and activity, both theoretical and computational. This book, the first introduction to categorial grammars, is written as an objective critical assessment. Categorial grammars offer a radical alternative to the phrase-structure paradigm, with deep roots in the philosophy of language, logic and algebra. Mary McGee Wood outlines their historical evolution and discusses their formal basis, starting with a quasi-canonical core and considering a number of possible extensions. She also explores their treatment of a

number of linguistic phenomena, including passives, raising, discontinuous dependencies and non-constituent coordination, as well as such general issues as word order, logic, psychological plausibility and parsing. This introduction to categorial grammars will be of interest to final year undergraduate and postgraduate students and researchers in current theories of grammar, including comparative, descriptive, and computational linguistics.

Whether through speech, writing, or other methods, language and communication has been an essential tool for human cooperation and development. Across the world, language varies drastically based on culture and disposition. Even in areas in which the language is standardized, it is common to have many varieties of dialects. It is essential to understand applied linguistics and language practices to create equitable spaces for all dialects and languages. The Research Anthology on Applied Linguistics and Language Practices discusses in-depth the current global research on linguistics from the development of language to the practices in language acquisition. It further discusses the social factors behind language and dialect as well as cultural identity found behind unique traits in language and dialect. Covering topics such as linguistic equity, phonology, and sociolinguistics, this major reference work is an indispensable resource for linguists, pre-service teachers, libraries, students and educators of higher education, educational administration, ESL organizations, government officials, researchers, and academicians. The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century. This branch of linguistics, broadly known as Generative Grammar, is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the 'language organ'. The series comprises high quality monographs and collected volumes that address such issues. The topics in this series range from phonology to semantics, from syntax to information structure, from mathematical linguistics to studies of the lexicon.

This volume brings together recent scholarship addressing a number of significant issues in linguistic theory and description, including verb classification, case marking, comparative constructions, noun phrase structure, clause linkage and reference-tracking in discourse. These topics are discussed with respect to a wide range of languages, including Bamunka (Bantu), Biblical Hebrew, Japanese, Persian, Pitjantjatjara (Australia), Russian and Taiwan Sign Language. The theoretical perspective employed in these analyses is that of Role and Reference Grammar (RRG), a theory which strives to describe language structure and grammatical phenomena in terms of the interaction of syntax, semantics and discourse-pragmatics. RRG differs from other parallel-architecture, constructionally-oriented theories in important ways, particularly with respect to the ability to formulate cross-linguistic generalizations. The ability of RRG to facilitate the formulation of cross-linguistic generalizations is exemplified well in the contributions to this volume. As such, this text makes important theoretical and descriptive contributions to contemporary linguistic discussions.

New Graded Method in English Grammar

Morphological and syntactic issues have received relatively little attention in Functional Grammar, due to the fact that this grammatical model, given its functional orientation, was primarily concerned with developing its pragmatic and semantic components. Now that these have been solidly developed, this book turns to the further development of the syntactic and morphological components of the model. Two recent developments receive pride of place: Bakker's Dynamic Expression Model and Hengeveld and Mackenzie's Functional Discourse Grammar. The first model aims at accounting for the complex interactions that one finds in many languages between the sets of expression rules that have to account for form on the one hand and those that establish order on the other. The second model takes a further step by considering morphosyntactic and phonological representations to be part of the underlying structure of the grammar rather than as the output of that grammar, contrary to the original assumptions in FG. The book accordingly contains synopses of these two proposals as well as

applications of these to a variety of linguistic phenomena. Further articles provide detailed analyses of a range of semantic and pragmatic categories and their morphosyntactic expression in a wide variety of languages. The articles in this book contain data on some 60 different languages, including focused articles on phenomena in Arabic, Danish, English, Lengua de Señas Española, Mapudungun, Plains Cree, and Tanggu. In all, the contributions to this volume show that the issue of morphosyntactic expression in Functional Grammar is very much alive and moving into promising new directions, while at the same time contributing to a better understanding of a large number of morphosyntactic phenomena in a wide variety of languages.
