***Lasting six weeks, and covering 16,000 miles from London to Mexico City via some of the most varying, tortuous and difficult terrain on three continents, the 1970 World Cup Rally was a unique high-speed event, attracting many serious works teams such as Ford and British Leyland. Despite the tremendous amounts of money spent choosing and developing new cars, completing months-long route surveys, and analysing every detail of diets, oxygen provision, and the number of crew members, out of an entry of more than 100 cars, only 23 cars made it to the finish. It was then, and remains now, the toughest rally of all time.***

***Around the world lies a number of long-forgotten raceways; windswept and abandoned, the derelict pit roads and crumbling concrete are all that remains of once great race tracks. From the NASCAR heartland of North Wilkesboro and Middle Georgia to the great European super speedways at Monza and Brooklands. All photographed as they are now, but remembered in their prime.***

***The beautiful design of the Alpine Renault ‘berlinettes’ and their extraordinary performances in competition made them the cars to beat in the late 1960s and early 1970s. This book brings to life the efforts, successes and failures of the engineers and drivers that worked with the cars, and explores the berlinettes’ development and history in fascinating detail.***

The author examines the factors which influence terrorists' target selection. In particular he looks at the influence of the ideologies, strategies and tactics of terrorist groups, and describes how these are restricted by the terrorists' resources, by protective and anti-terrorist measures, by the society within which the terrorists operate, and by the nature of the terrorists and their supporters. He concludes that terrorists' target selection is often both explicable and logical.

Knowledge acquisition has become a major area of artificial intelligence and cognitive science research. The papers in this book show that the area of knowledge acquisition for knowledge-based systems is still a diverse field in which a large number of research topics are being addressed. However, several main themes run through the papers. First, the issues of integrating knowledge from different sources and K.A. tools is a salient topic in many papers. A second major topic in the papers is that of knowledge modelling. Research in knowledge-based systems emphasises the use of generic models of reasoning and its underlying knowledge. An important trend in the area of knowledge modelling aims at the formalisation of knowledge models. Where the field of knowledge acquisition was without tools and techniques years ago, now there is a rapidly growing body of techniques and tools. Apart from the integrated workbenches already mentioned above, several papers in this book present new tools. Although knowledge acquisition and machine learning have been considered as separate subfields of AI, there is a tendency for the two fields to come together. This publication combines machine learning techniques with more conventional knowledge elicitation techniques. A framework is presented in which reasoning, problem solving and learning together form a knowledge intensive system that can acquire knowledge from its own experience.

Short story publishing is flourishing in the 21st century and is no longer seen as a poor relation of the novel. But what is a short story? And how do you write one? Robert Graham takes you through everything you need to know, from how a writer works to crafting and editing your own fiction. This heavily revised edition features new chapters by contemporary fiction writers. Stressing the importance of reading broadly and deeply, the book includes a wide range of prompts and writing exercises. It teaches you how to read as a writer and write like somebody who has read. You will learn the elements of craft you need to produce short stories, and one of the key writer's disciplines: reflecting on your own work. Whether you are a student or an experienced author, this book will teach you how to write short stories – and reflect on the creative processes involved. The book features chapters from writer-teachers James Friel, Rodge Glass, Ursula Hurley, Heather Leach, Helen Newall, Jenny Newman, James Rice and Tom Vowler.

It's hard to believe, but the W129-series Mercedes-Benz SL was launched over 20 years ago. However, its timeless styling has kept it fresh and attractive in the eyes of a new generation of enthusiasts, as well as those returning to the car having owned one when they were still in the dealerships. A combination of superb original design and the desirability of this series of classic German machines, and has ensured that many of these cars can still be seen in regular use today. Covering the SL's ever-changing specification, and its presence in many of the world's major markets is a huge task, but it's all presented here in definitive detail, along with stunning contemporary photographs from any reference library shelf or connoisseur's coffee table. Two earlier books, also published by Veloce, and covering the W113 cars and the 107-series SL and SLC, act as perfect companions to this title, which takes the SL story up to 1989.

**The EPA issued a notice on January 19, 1993, declaring that the agency will now use this 1987 Corps of Engineers manual to identify wetlands. The manual presents approaches and methods for identifying and delineating wetlands for the purposes of Section 404 of the Clean Water Act. It describes methods for applying a multiparameter approach. Separate sections are devoted to preliminary data gathering and analysis, method selection, routing determinations, atypical situations, and problem areas. Four appendices provide a glossary of wetland terminology, example data forms, and useful information on vegetation and hydric soils.**

**This step-by-step, heavily illustrated guide shows the caravan owner and user how he or she can turn their caravan into a perfect and unique holiday retreat. It details the huge range of improvements available and - crucially - how you can apply them to your own caravan. Based on a magazine-article format, this manual is easy to use and will help you create the caravan of your dreams.**

**Toleman was the team that took Ayrton Senna into Formula 1, to which he responded by creating a masterpiece of movement at Monaco. This was the team that launched Derek Warwick. This was the team that brought Rory Byrne, Ferrari's design genius, to sudden prominence. This book presents the story of Toleman.**

**This book is a trip down memory lane, recalling the days when Formula 5000 cars roared around the race tracks in Britain and Europe, creating a lot of noise and, occasionally, dust. The wail of a 5-litre engine was often more spine-tingling than ANY other racing car! Nowadays, many of the same cars show modern day spectators just what Formula 5000 was, back in the day. Few, if any, of the drivers are prima-donnas and many want to know what their car did before it came into their possession. This book answers those questions and many more.**
