This book presents a new framework for leadership in the construction industry which draws from the authentic leadership construct. The framework has three major themes: self-leadership, self-transcendent leadership, and sustainable leadership. Despite its significance, leadership has not been given due importance in the construction industry as focus is placed on managerial functionalism. At the project level, even with the technological advances in the industry in recent years, construction is realized in the form of people undertaking distinct interdependent activities which require effective leadership. The industry faces many challenges including: demanding client requirements and project parameters; more stringent regulations, codes and systems; intense competition in the industry; and threats from disruptive enterprise. In such a complex environment, technology-driven and tool-based project and corporate management is insufficient. It must be complemented by a strategic, genuine, stakeholder-focused and ethical leadership. Leadership in the Construction Industry is based on a study on authentic leadership and its development in Singapore. Leadership theories and concepts are reviewed; the importance of leadership in the construction industry is discussed; and the grounded theory approach which was applied in the study is explained. Many eminent construction professionals in Singapore were interviewed in the field study. Emerging from the experiences of the leaders documented in this book are three major themes: (1) self-leadership: how leaders engage in various self-related processes such as self-awareness, self-regulation, and role modeling. (2) self-transcendent leadership: how leaders go beyond leading themselves to leading others through servant leadership, shared leadership, spiritual leadership, and socially-responsible leadership; and, finally, (3) sustainable leadership or the strategies leaders employ to make the impact of their leadership lasting. A synthesis of these themes and their implications for leadership development is presented before the book concludes with some recommendations for current and aspiring leaders about how they can engage with them. This book is essential reading for all construction practitioners from all backgrounds; and researchers on leadership and management in construction.

This study discusses sector investment programs (SIPs) as an alternative way of financing development in Sub-Saharan Africa in order to address the shortcomings of
lending in the region. The report examines the nature and features of SIPs by drawing on the limited experience with such operations in a number of coutries to date,
Bangladesh, Mozambique, Pakistan, Tanzania, and Zambia. A SIP is distinguished by its comprehensive sector coverage, by close coordination among all parties, including
and donors, and by the requirement that it be formulated under local ownership and management

This manual, which is part of a series on agricultural and industrial machinery, deals with electrical systems. Special attention is paid to electricity as it is commonly used on mobile machines. The following topics are covered in the individual chapters: electricity and how it works (current, voltage, and resistance; types of circuits; conductors; semiconductors; magnetism; electromagnetism; electromagnetic induction; capacitors); test equipment and tools; storage batteries; charging circuits; starting circuits; ignition circuits; electronic ignition systems (principle of operation, self-integrated electronic ignition); lighting and accessory circuits (lighting circuits, wiring harnesses, electromagnetic clutches, gauges, meters, horns and buzzers, relays, solenoids, switches, electric motors, cigarette lighters, flame rods, transformers, glow plugs); connectors (current flow in connectors, common types of connectors, stripping and crimping, soldering and bolt cutting); monitors and controllers (agricultural and industrial applications, principles of operation, planters and seeders, round balers, forage harvesters, tractors, motor graders, scrapers); general maintenance (storage batteries, direct and alternating current charging circuits, and starting and ignition circuits), and diagnosis and testing of electrical systems (testing and troubleshooting). Emphasis is on the theory of operation, diagnosis, and repair. Concluding each chapter is a set of self-test questions. A list of definitions and answers to the questions are also provided. (MN)

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.

Whether for big budget films and game productions or lower budget TV and Internet content, creating flexible and believable character rigs is an essential skill required to bring any 3D animation to life. As the leading software used for cutting-edge animation, Maya has an established rigging toolset for creating realistic character controls. Traditionally, however, the process of manually building custom rigs in the software interface has been time-consuming and expensive for those who want to produce high-quality 3D characters. Now for the first time and from the author of the best-seller, Maya Character Creation, comes an in-depth guide on how the pros are using MEL (Maya Embedded Language) scripting to streamline and automate the rigging process. With MEL Scripting a Character Rig in Maya, you'll learn how you can build custom character rigs in a matter of seconds, as opposed to days or weeks. In this detailed guide, you'll learn: - The techniques used to build a complex character rig in the software interface, followed by instructions for writing the equivalent MEL code for scripting the entire process. - Fundamental concepts of creating animation controls in Maya, from the basics of creating, editing, and binding skeletons, to more complex rigs with controls that employ spline IK and channel connections. - Important coding techniques such as using conditional statements, loops, variables, and procedures. - How to create a character animation GUI (Graphical User Interface) that makes animating the character easy and fast. - Important skills for building rigs using numerous hands-on exercises, all code examples and Maya files available on the companion Web site.
