The truck's role in American society changed dramatically from the 1960s through the 1980s, with the rise of off-roaders, the van craze of the 1970s and minivan revolution of the 1980s, the popularization of the SUV as family car and the diversification of the pickup truck into multiple forms and sizes. This comprehensive reference book follows the form of the author's popular volumes on American cars. For each year, it provides an industry overview and, for each manufacturer, an update on new models and other news, followed by a wealth of data: available powertrains, popular options, paint colors and more. Finally, each truck is detailed fully with specifications and measurements, prices, production figures, standard equipment and more.

Golding's iconic 1954 novel, now with a new foreword by Lois Lowry, remains one of the greatest books ever written for young adults and an unforgettable classic for readers of any age. This edition includes a new Suggestions for Further Reading by Jennifer Buehler. At the dawn of the next world war, a plane crashes on an uncharted island, stranding a group of schoolboys. At first, with no adult supervision, their freedom is something to celebrate. This far from civilization they can do anything they want. Anything. But as order collapses, as strange howls echo in the night, as terror begins its reign, the hope of adventure seems as far removed from reality as the hope of being rescued.

Arctic Artist is the liveliest and most complete account of Sir John Franklin's tragic first Arctic land expedition. George Back's prose captures the drama of this journey, and his superb watercolour sketches reveal the beauty and wonder of this northern land. Back's journal completes Stuart Houston's trilogy of the journals of Franklin's officers, and is particularly valuable because it is the only journal that records the entire expedition; Franklin himself relied on it for his own published account of the journey. Houston provides an introduction and extensive annotations, as well as synopses of the frank comments regarding the expedition recorded in the various journals of the Hudson's Bay fur trade posts. I.S. MacLaren's commentary on Back's paintings reveals a naval officer of exceptional talent. Conversant with the artistic conventions and aesthetic temper of his age, Back used his sketchbooks not only to depict the expedition's progress but also to capture his imaginative response to the northern wilderness. MacLaren also edits and comments on two other documents written by Back during the expedition: a candid letter to his brother and a poem dramatizing the disaster that claimed the lives of eleven of the twenty explorers in Franklin's party.

Author Corey Ford writes the classic and moving story of naturalist Georg Wilhelm Steller, who served on the 1741-42 Russian Alaska expedition with explorer Vitus Bering. Steller was one of Europe's foremost naturalists and the first to document the unique wildlife of the Alaskan coast. In the course of the voyage, Steller made his valuable discoveries and suffered, along with Bering and the crew of the ill fated brig St. Peter, some of the most grueling experiences in the history of Arctic exploration. First published in 1966, *Where the Sea Breaks Its Back* was hailed as "among this country's greatest outdoor writing" by *Field & Stream* magazine, and today continues to enchant and enlighten the new generations of readers about this amazing and yet tragic expedition, and Georg Steller's significant discoveries as an early naturalist.

SUVs have taken over America's roads. Ad campaigns promote them as safer and "greener" than ordinary cars and easy to handle in bad weather. But very little about the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In *High and Mighty*, he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for

their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of *Unsafe at Any Speed* and *Fast Food Nation*, Bradsher's book is a damning exposé of an industry that puts us all at risk, whether we recognize it or not.

Drawing on rarely examined diaries and journals, *Down the Great Unknown* is the first book to tell the full, dramatic story of the Powell expedition. On May 24, 1869 a one-armed Civil War veteran, John Wesley Powell and a ragtag band of nine mountain men embarked on the last great quest in the American West. The Grand Canyon, not explored before, was as mysterious as Atlantis—and as perilous. The ten men set out from Green River Station, Wyoming Territory down the Colorado in four wooden rowboats. Ninety-nine days later, six half-starved wretches came ashore near Callville, Arizona. Lewis and Clark opened the West in 1803, six decades later Powell and his scruffy band aimed to resolve the West's last mystery. A brilliant narrative, a thrilling journey, a cast of memorable heroes—all these mark *Down the Great Unknown*, the true story of the last epic adventure on American soil.

SHORTLISTED FOR THE 2017 ROYAL SOCIETY SCIENCE BOOK PRIZE Even small children know there are infinitely many whole numbers - start counting and you'll never reach the end. But there are also infinitely many decimal numbers between zero and one. Are these two types of infinity the same? Are they larger or smaller than each other? Can we even talk about 'larger' and 'smaller' when we talk about infinity? In Beyond Infinity, international maths sensation Eugenia Cheng reveals the inner workings of infinity. What happens when a new guest arrives at your infinite hotel - but you already have an infinite number of guests? How does infinity give Zeno's tortoise the edge in a paradoxical foot-race with Achilles? And can we really make an infinite number of cookies from a finite amount of cookie dough? Wielding an armoury of inventive, intuitive metaphor, Cheng draws beginners and enthusiasts alike into the heart of this mysterious, powerful concept to reveal fundamental truths about mathematics, all the way from the infinitely large down to the infinitely small.

A searing portrait of the racial dynamics that lie inescapably at the heart of our nation, told through the turbulent history of the city of St. Louis. From Lewis and Clark's 1804 expedition to the 2014 uprising in Ferguson, American history has been made in St. Louis. And as Walter Johnson shows in this searing book, the city exemplifies how imperialism, racism, and capitalism have persistently entwined to corrupt the nation's past. St. Louis was a staging post for Indian removal and imperial expansion, and its wealth grew on the backs of its poor black residents, from slavery through redlining and urban renewal. But it was once also America's most radical city, home to anti-capitalist immigrants, the Civil War's first general emancipation, and the nation's first general strike—a legacy of resistance that endures. A blistering history of a city's rise and decline, The Broken Heart of America will forever change how we think about the United States.

Journalist Walls grew up with parents whose ideals and stubborn nonconformity were their curse and their salvation. Rex and Rose Mary and their four children lived like nomads, moving among Southwest desert towns, camping in the mountains. Rex was a charismatic, brilliant man who, when sober, captured his children's imagination, teaching them how to embrace life fearlessly. Rose Mary painted and wrote and couldn't stand the responsibility of providing for her family. When the money ran out, the Walls retreated to the dismal West Virginia mining town Rex had tried to escape. As the dysfunction escalated, the children had to fend for themselves, supporting one another as they found the resources and will to leave home. Yet Walls describes her parents with deep affection in this tale of unconditional love in a family that, despite its profound flaws, gave her the fiery determination to carve out a successful life. -- From publisher description.

1958 was the year life came into focus for Lisa Sharp. Her mother, newly divorced, began the move from California to the San Rafael Cattle Company, a 22,000-acre cattle ranch south of Patagonia, Arizona. Leaving the city life behind, Lisa and her family traded paved roads, dependable electricity, and telephones for wide open spaces, prairie grass, horses, and cattle. Most eight-year-olds would have been homesick. When she first walked into the ranch corrals, "I became a part of that world as easily as that first shoot of spring grass. . . . I was home." A Slow Trot Home stitches together vignettes about the author's mother, ranching, cowboys, and a love of the land that is passed down through generations. With poignant reflections on ranch living along the US/Mexico border, Lisa resurrects an era that, for so many of us, endures only as a memory.

Consumer Reports Used Car Buying Guide

*A great story of discovery and adventure in the tradition of Longitude Maritime navigation remained largely a matter of guesswork until well into the 19th century, and making a voyage meant following a series of all-too-often disastrous hunches. Changing that became the lifelong obsession of the brilliant, irascible geographer Matthew Fontaine Maury, whose career both aided and mirrored America's rise as a maritime power. With his controversial appointment as the first superintendent of the U.S. Naval Observatory in 1840, he at last found his life's work. While others built railroads across the trackless interior, Maury mapped the highways of wind and current over the previously trackless sea. In *Tracks in the Sea*, Chester G. Hearn uses Maury's career as a window on the 19th century, including the brief but glorious clipper-ship era of the 1850s, the rise of steam and steel, the Civil War and the destruction of the U.S. merchant fleet, and the points of intersection with some of the most colorful and influential people of the time, including presidents, congressmen, military leaders, scientists, explorers, merchants, and writers.*
