that can't be easily modified by anyone except their vendors or selected partners. These “tethered appliances” have already been used in remarkable but little-known ways: car GPS systems have

It has become evident over

Download Ebook 2002 Tahoe Multifunction Switch

the last years that abnormalities in RNA processing play a fundamental part in the pathogenesis of neurodegenerative diseases. Cellular viability depends on

Download Ebook 2002 Tahoe Multifunction Switch

proper regulation of RNA metabolism and subsequent protein synthesis, which requires the interplay of many processes including transcription, pre-mRNA splicing, mRNA editing as

Download Ebook 2002 Tahoe Multifunction Switch

well as mRNA stability, transport and translation. Dysfunction in any of these processes, often caused by mutations in the coding and non-coding RNAs, can be very destructive to the

cellular environment and consequently impair neural viability. The result of this RNA toxicity can lead to a toxic gain of function or a loss of function, depending on the nature of the

mutation. For example, in repeat expansion disorders, such as the newly discovered hexanucleotide repeat expansion in the C9orf72 gene found in amyotrophic lateral sclerosis

Download Ebook 2002 Tahoe Multifunction Switch

(ALS) and frontotemporal dementia (FTD), a toxic gain of function leads to the formation of RNA foci and the sequestration of RNA binding proteins (RBPs). This in return leads to a loss of

Download Ebook 2002 Tahoe Multifunction Switch

function of those RBPs, which is hypothesized to play a significant part in the disease progression of ALS and FTD. Other toxicities arising from repeat expansions are the formation

of RNA foci, bi-directional transcription and production of repeat associated non-ATG (RAN) translation products. This book will touch upon most of these disease mechanisms

triggered by aberrant RNA metabolism and will therefore provide a broad perspective of the role of RNA processing and its dysfunction in a variety of neurodegenerative

disorders, including ALS, FTD, Alzheimer's disease, Huntington's disease, spinal muscular atrophy, myotonic dystrophy and ataxias. The proposed authors are leading scientists in the field and are

expected to not only discuss their own work, but to be inclusive of historic as well as late breaking discoveries. The compiled chapters will therefore provide a unique collection of novel studies

and hypotheses aimed to describe the consequences of altered RNA processing events and its newest molecular players and pathways.
