Today's public and private schools can no longer rely on traditional sources of funding to fulfill their educational goals. Although grants

step guide is for principals who want to improve their chances of winning grants for their schools. As administrative leaders, principals are in a pivotal position to motivate teachers, parents,

and volunteers in the grantseeking process. This guide provides principals with techniques for mobilizing school staff, coordinating community support, developing winning proposals,

constructing  
realistic plans and  
budgets, and  
successfully  
implementing  
those grants that  
have been  
awarded. David  
Bauer is not only  
an educator and  
former  
administrator but

internationally,  
presenting a  
difficult task to  
those who wish to

Simplified Signs  
presents a system of  
manual sign

intended for special  
populations who have  
had limited success  
mastering spoken or  
full sign languages. It  
is the culmination of  
over twenty years of

research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each

sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents

the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign

Crop wild relatives (CWR) are plant species which are more or less closely related to crops. They are a vital resource by providing a pool of genetic variation that can be used in breeding new and better adapted varieties of crops that are resistant to stress, disease, drought and other factors. They will be increasingly important in

allowing crops to adapt to the impacts of climate, thus safeguarding future agricultural production. Until recently, the main conservation strategy adopted for CWR has been ex situ - through the maintenance of samples as seed or vegetative material in various kinds of genebank or other facilities. Now the need to conserve CWR in their

natural surroundings (in situ) is increasingly recognized. Recent research co-ordinated by Bioversity International has produced a wealth of information on good practices and lessons learned for their effective conservation. This book captures the important practical experiences of countries participating in this work and describes

them for the wider conservation community. It includes case studies and examples from Armenia, Bolivia, Madagascar, Sri Lanka and Uzbekistan, which are important centres of diversity for crop wild relatives, and covers four geographical regions - the Caucasus, South America, Africa and the Asia-Pacific

non-specialist. The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics. In addition, it can serve as a guide for lectures and seminars on a graduate level. The series de Gruyter Studies in Mathematics was founded ca. 35 years ago by the late Professor
