The record-breaking phenomenon from Elizabeth Kostova is a celebrated masterpiece that "refashioned the vampire myth into a compelling contemporary novel, a late-night page-turner" (San Francisco Chronicle). Breathhtakingly suspenseful and beautifully written, The Historian is the story of a young woman plunged into a labyrinth where the secrets of her family ’s past connect to an inconceivable evil: the dark fifteenth-century reign of Vlad the Impaler and a time-defying pact that may have kept his awful work alive through the ages. The search for the truth becomes an adventure of monumental proportions, taking us from monasteries and dusty libraries to the capitals of Eastern Europe—in a feat of storytelling so rich, so hypnotic, so exciting that it has enthralled readers around the world. " Part thriller, part history, part romance...Kostova has a keen sense of storytelling and she has a marvelous tale to tell." —Baltimore Sun

The Catastrophist is a brilliant, highly acclaimed novel of love, passion, violence, and desire, set in the Belgian Congo in 1959. While expatriates loll about their pools in a colonial paradise soon to erupt into chaos, huge crowds are drawn to the charismatic Congolese independence leader Patrice Lumumba -- and his even more dangerous rivals. One man sees the cracks appearing around him and struggles to hold on to his lover, his sanity, and ultimately, his life. Gillespie, the outside

journalist, is in Leopoldville for the beautiful Italian, Ines. He is desperate for her love, while she is obsessed with the unfolding drama, caught up in history, ideology, hero worship. In a world slipping out of control, gripped by disgust, fear, and incomprehension, Gillespie feels that events threaten to overwhelm him -- as does his friendship with the amiable but sinister American, Stipe: his relationship with his canny native driver, Auguste: and, above all, his love for Ines. It is Ines who defines Gillespie as a catastrofista, an Italian word for somebody for whom "no problem is small. Nothing can be fixed: it is always the end." for Gillespie is deeply pessimistic and skeptical about their relationship as well as politics, while Ines believes in engagement and commitment, whatever the risks -- which, as it turns out, are greater than either of them can foresee. As colonial corruption and injustice give way to turmoil, brutality, and murder, Gillespie is finally forced to confront

is happening before his eyes. In subtle, haunting prose, Ronan Bennett captures the complex connection between the personal and the political, between cruelty and lust, between courage and fear, between detachment and involvement. The Catastrophist is a bold, courageous novel, at once a searing love story and a terrifying political thriller, in the tradition of such books as Graham Greene's The Comedians or such postcolonial classics as The Year of

Dangerously -- an erotic Heart of Darkness for the twentieth century.

Energy transitions are fundamental to achieving a zero-carbon economy. This book explains the urgently needed transition in energy systems from the perspective of the global political economy. It develops an historical, global, political and ecological account of key features of energy transitions: from their production and financing, to how they are governed and mobilised. Informed by direct engagement in projects of energy transition, the book provides an accessible account of the real-world dilemmas in accelerating transitions to a low carbon economy. As well as changes to technology, markets, institutions and behaviours, Power Shift shows that shifts in power relations between and within countries, and across social groups and political actors, are required if the world is to move onto a more sustainable path. Using contemporary and historical case studies to explore energy transitions, it will be of interest to students and researchers across disciplines, policymakers and activists.

NATIONAL BOOK AWARD FINALIST • NATIONAL BESTSELLER • A twisting, haunting true-life murder mystery about one of the most monstrous crimes in American history, from the author of The Last City of Z. In the 1920s, the richest people per capita in the world were members of the Osage Nation in Oklahoma. After oil was discovered beneath their land, the Osage rode in chauffeured automobiles, built mansions, and sent their children to study in Europe. Then, one by one, the Osage began to be killed off. The family of an Osage woman, Mollie Burkhart, became a prime target. One of her relatives was shot. Another was poisoned. And it was just the beginning, as more and more Osage were dying under mysterious circumstances, and many of those who dared to investigate the killings were themselves murdered. As the death toll rose, the newly created FBI took up the case, and the young director, J. Edgar Hoover, turned to a former Texas Ranger named Tom White to try to unravel the mystery. White put together an undercover team, including a Native American agent who infiltrated the region, and together with the Osage began to expose one of the most chilling conspiracies in American history.

An enormously satisfying, exciting and enthring book, Vikram Chandra's novel draws the reader deep into the lives of detective Sartaj Singh and Ganesh Gaitonde, the most wanted gangster in India. Sartaj, the only Sikh inspector in the whole of Mumbai, is used to being identified by his turban, beard and the sharp cut of his trousers. But 'the silky Sikh' is now past forty, his marriage is over and his career prospects are on the slide. When Sartaj gets an anonymous tip off as to the secret hideout of the legendary boss of the G-company, he's determined that he'll be the one to collect the prize. This is a sprawling, epic novel of friendships and betrayals, of terrible violence, of an astonishing modern city and its underworld. Drawing on the best of Victorian fiction, mystery novels, Bollywood movies and Vikram Chandra's years of first hand research on the streets of Mumbai, this novel reads like a potboiling page-turner but resonates with the intelligence and emotional depth of the best of literature.

It is estimated that literally billions of residents in urban and peri-urban areas of Africa, Asia, and Latin America are served by onsite sanitation systems (e.g. various types of latrines and septic tanks). Until recently, the management of faecal sludge from these onsite systems has been grossly neglected, partially as a result of them being considered temporary solutions until sewer-based systems could be implemented. However, the perception of onsite or decentralized sanitation technologies for urban areas is gradually changing, and is increasingly being considered as long-term, sustainable options in urban areas, especially in low- and middle-income countries that lack sewer infrastructures. This is the first book dedicated to faecal sludge management. It compiles the current state of knowledge of the rapidly evolving field of faecal sludge management, and presents an integrated approach that includes technology, management, and planning based on Sandec's 20 years of experience in the field. Faecal Sludge Management: Systems Approach for Implementation and Operation addresses the organization of the entire faecal sludge management service chain, from the collection and transport of sludge, and the current state of knowledge of treatment options, to the final end use or disposal of treated sludge. The book also presents important factors to consider when evaluating and upscaling new treatment technology options. The book is designed for undergraduate and graduate students, and engineers and practitioners in the field who have some basic knowledge of environmental and/or wastewater engineering.

In the course of evolution, a great variety of root systems have learned to overcome the many physical, biochemical and biological problems brought about by soil. This development has made them a fascinating object of scientific study. This volume gives an overview of how roots have adapted to the soil environment and which roles they play in the soil ecosystem. The text describes the form and function of roots, their temporal and spatial distribution, and their turnover rate in various ecosystems. Subsequently, a physiological background is provided for basic functions, such as carbon acquisition, water and solute movement, and for their responses to three major abiotic stresses, i.e. hard soil structure, drought and flooding. The volume concludes with the interactions of roots with other organisms of the complex soil ecosystem, including symbiosis, competition, and the function of roots as a food source.
