The EU Commission has set the goal of facilitating a competitive transport system, increasing mobility and supporting growth while simultaneously reaching a target of 60 per cent emissions reductions by 2050. In light of past performance and estimated development, the target will not be reached without further behavioural change in

participating in the maritime enterprise. Shipping and the maritime offshore industry are among the most international businesses in the world, and the operation of ships and facilities at sea can involve very different interests in a wide variety of relationships. Although there is an international legal framework that covers the most frequent types of cases, questions remain regarding the

interplay of international and national legislation. Addressing those questions, the first part of this study analyses the rules and the limits of international regulation applicable at sea, namely regarding compensation for pollution damage. The second part focuses on the jurisdictional rules and conflict-of-law rules that may be used to deal with cases beyond the scope of

interested parties. The question is asked: does the liability system give the potential polluter incentives to take precautionary measures to avoid pollution or to reduce the possibility of pollution? The international regime on civil liability for marine oil pollution rests on the International Convention on Civil Liability for Oil Pollution Damage (CLC) and the International Convention

on the Establishment of an International Fund for Compensation for Oil Pollution Damage (Fund Convention). However, the world's biggest oil consumer and importer - the United States - has ratified neither, preferring its own Oil Pollution Act of 1990 (OPA), and China - currently the world's second oil-consuming country - has not ratified the Fund Convention. Thus it is reasonable to compare the three regimes -

Chitty on Contracts is the pre-eminent reference work on contract law in the common law world. It has been used for generations by lawyers as the leading guide to contracts, and is relied on to provide insight and aid in complex areas of the law. The work is in two volumes: Volume One covers the General Principles of contract law, while Volume Two offers guidance on Specific Contracts, namely contractual issues in specific industry sectors. (Volume One of the work is available as a standalone for those who need coverage of the general principles

Given the magnitude of the risks associated with commercial activities in the Arctic arising as a result of the milder climate, new business opportunities raise important questions of responsibility and liability. This book analyses the issues of responsibility and liability connected with the exploitation of natural resources, marine transport and other activities in the Arctic. Applying a combined private and public law perspective on these issues, it considers both the business and societal interests related to Arctic development using Greenland as an example. The book focuses on problems that are specific to Greenland and wider

issues that affect all Arctic states. The law of commercial remedies raises a number of important doctrinal, theoretical and practical controversies which deserve sustained and rigorous examination. This volume explores such controversies and suggests solutions, which is essential to ensure that the law is defensible, clear and just. With contributions from twenty-three leading academic and practitioner experts, this book addresses significant issues in the law which, taken together, range across the entire remedial jurisdiction as it applies to commercial disputes. The book primarily focuses on the resolution of controversies in the English law

of commercial remedies, but recent developments elsewhere are also considered, especially in other common law jurisdictions. The result provides remarkably comprehensive coverage of the field which will be of relevance to academics, students, judges and practitioners.

Maritime Law Taylor & Francis

This collection of essays critically evaluates the legal framework necessary for the use of autonomous ships in international waters. The work is divided into three parts: Part 1 evaluates how far national shipping

regulation, and the public international law background that lies behind it, may need modification and updating to accommodate the use of autonomous ships on international voyages. Part 2 deals with private law and insurance issues such as collision and pollution liability, salvage, limitation of liability and allocation of risk between carrier and cargo interests. Part 3 analyses international convention regimes dealing with maritime safety and other matters, arguing for specific changes in the existing conventions such as SOLAS and MARPOL, which would provide the international framework that is necessary for putting autonomous ships into commercial use. The book also takes the view that amendment of international conventions is important

in the case of liability issues, arguing that leaving such matters to national law, particularly issues concerning product liability, could not only restrict or hinder the availability of liability insurance but also hamper the development of technology in this field. Written by internationally-known experts in their respective areas, the book offers a holistic approach to the debate on autonomous ships and makes a timely and important contribution to the literature.

world have some kind of navigational history and are described in detail on maps, groundings, delays, and other accidents still occur to vessels. With the growing complexity of vessels and the increasing cost of their operation, the amount of damages that the shipowner can suffer by delaying a vessel due to congestion or repairs can be significant. The issue of safe ports and berths naturally stems from the vessel's operation. This dissertation delineates a meaning of safe ports and berth under English and American law, discusses a standard of culpability of the parties, and sets benchmarks on physical, political,

administrative and ecological safety. A standard of liability of the parties responsible for nomination of the port is explained in detail. Under English law, it is a warranty of the charterers that encompasses strict liability for nomination of an unsafe port. American law provides two approaches: one of a warranty given by the charterers; another of a duty of due diligence of the charterers in selecting a port. Physical, political, administrative and environmental conditions of the port are discussed with examples of court's decisions and arbitration awards. The dissertation concludes with a proposal that the due diligence
