**Under the direction of the Communist Party of China (CPC), key legal challenges have been identified which will shape the modernization of China's legal and administrative institutions. An increasingly complex set of legal actors now seek to influence this development, including securities regulators, bankers, accountants, lawyers, local-level mediators and some of China's newly rich. Whilst the rising middle class wants to voice its interests and concerns, the CPC strives to maintain its leading role. This book provides a critical appraisal of China's deepening socialist rule of law and looks ahead to the implications of the domestic reforms for the international legal domain. With contributions from leading Chinese law specialists, it draws on specific illustrations from judicial reform, constitutional law, procedural law, anti-corruption, property law and urban development, socio-economic dispute resolution and Chinese macro-economics. The book questions how China's domestic law reforms will impact international legal systems, and how international law can be used in managing key regional and bilateral relationships and in dispute resolution, such as in the South China Sea and international trade. Assessing the state and direction of domestic law reform and including debates around the legal implications of some of China's most pressing foreign policy challenges today, this volume will be of huge interest to students, scholars and practitioners with an interest in Asia law, Chinese law, international law, comparative law and law reform.**

Millions compete for exposure on Google, Yahoo!, and Bing, but 99% of them fail to get results. As the founder of leading digital intelligence firm, AdGoroo, search advertising authority Richard Stokes is in a unique position to reveal what's going wrong and provide solutions to fix it. Since the publication of the first edition, there have been a number of revolutionary changes in paid search. First, we are increasingly searching from our cell phones – not just desktops. Mobile search now accounts for 15% of searches in the US (up from ~0% in 2009). Second, Google is no longer the only game in town. Bing now accounts for 30% of all US searches and is growing in importance worldwide. Finally, "Search Extensions" have become a powerful new technique that search advertisers can use to gain an edge on the competition. With them, advertisers can collect phone numbers and email addresses with their ads, limit their ads to certain times of day, deliver coupons to nearby customers, and even provide handy "call me" buttons that are displayed only on cell phones. In this new edition, Stokes details all this and more, providing information exclusive to this guide and of priceless value to its more advanced search audience. With insider insight from Stokes and using proven strategies from today's search advertising elite, paid search advertisers discover how to drive significantly more traffic to their site, dramatically increase click-through rates, steal impressions from competitors, boost their conversions, and increase their sales by unbelievable amounts.

The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child's illness and at the end of life. The new edition of the Oxford Textbook of Palliative Care for Children brings together the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. 'Foundations of Care' describes core issues, the foundations on which paediatric palliative care is based. 'Child and Family Care' looks at different aspects of psychological, social, and cultural care for the sick child or young person, and their family. These chapters cover the time course of the illness, around the time of death and support for the bereaved family. 'Symptom Care' focuses on the uses of medication, specific symptoms, and their management. Finally, 'Delivery of Care' examines practical approaches to care in different environments and the needs of clinicians. Two new editors join the team from Canada and South Africa, reflecting our aims to contribute towards the development of care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving models that support the delivery of palliative medicine to children. This includes two new chapters, looking in detail at 'Decision Making' and 'Perinatal Care', and a new section highlighting the emerging importance of 'Palliative Care for Children in Humanitarian Crises'. This book is an essential resource for anyone who works with children worldwide.

Medical coding is a process where you enter abbreviations on medical charts. A pamphlet can be helpful in learning the words and the abbreviations for those words. The abbreviations can be written on index cards so that the student can study for quizzes. Students learn the medical lingo seen on charts where medical coding is used, such as a doctor's office or a hospital.

This volume shows how ICT (information and communications technology) can play the role of a driver of business process reengineering (BPR). ICT can aid in enabling improvement in BPR activity cycles as it provides many components that enhance performance that can lead to competitive advantages. IT can interface with BPR to improve business processes in terms of communication, inventory management, data management, management information systems, customer relationship management, computer-aided design, computer-aided manufacturing (CAM), and computer-aided engineering. This volume explores these issues in depth.

China's current social medical insurance system has nominally covered more than 95 per cent of 1.4 billion population in China and is moving towards the ambitious goal of universal health insurance coverage. Challenges posed by a rapidly ageing population, an inherently discriminatory design of the health insurance system, the disorder of drug distribution system and an immature legal system constrain the Chinese government from realizing its goal of universal health insurance coverage in the long run. This book uses a refined version of historical institutionalism to critically examine China's pathway to universal health insurance coverage since the mid-1980s. It pays crucial attention to the processes of transforming China's healthcare financing system into the basic social medical insurance system alongside rapid socio-economic changes. Financing Healthcare in China will interest researchers and government and think-tank officials interested in the state of healthcare reforms in China. Healthcare specialists outside of East Asia may also be interested in its general study of healthcare in developing countries. Scholars and students interested in the healthcare field will also find this useful.

**This book is open access under a CC BY 4.0 license. This edited collection explores the background and implementation of the Nordic Barnahus (or 'Children's House') model - recognised as one of the most important reforms related to children who are the victims of crime in the Nordic region. This book discusses both its potential to affect change and the challenges facing it. The model was introduced as a response to a growing recognition of the need for more integrated and child-centred services for children exposed to violence and sexual abuse. In the Barnahus structure, different professions work together to ensure that victimized children receive help and treatment and that their legal rights are met. This original study is organised into four broad themes: child-friendliness, support and treatment; the forensic child investigative interview; children's rights perspectives; and interagency collaboration and professional autonomy. Each themed section includes in-depth chapters from different Nordic countries, outlining and analysing the practice and outcomes of the collaborative work engaged in by Barnahus from different perspectives. The introductory and concluding chapters offer a comparative lens useful for policy and practice implementation within the Nordic welfare state context and beyond, ensuring this book has global academic and practical appeal.**

**This book explores how China's political system responds to crisis. A crisis is an episode whose impact cannot be controlled merely by astute on-the-ground incident management, particularly in cases involving widespread doubt about the legitimacy of established policy paradigms or the political order as a whole. Crisis can create “political windows” for advocacy groups challenging established policies in pluralist democracies. The political battle between competing definitions of an uncertain and ambiguous situation among the various actors provides them with crisis-induced opportunity space for dramatic policy change. However, the process of crisis-induced policy change, mainly by crisis framing, in non-west regimes like China has not been adequately addressed. As China's leadership foregrounds legitimacy in “victory” over COVID-19, and a new era of climate change disasters begins, this dynamic model of crisis and recuperation will offer food for thought for scholars of Chinese and global politics.**
