The Air Pollution Specialist  
Passbook(R) prepares you for your  
test by allowing you to take practice  
exams in the subjects you need to  
study. It provides hundreds of  
questions and answers in the areas  
that will likely be covered on your  
upcoming exam, including but not  
limited to: engineering, physics,  
chemistry, mathematics, sciences  
and meteorology as related to air

quality management and pollution control; research methods; statistical analysis; principles and methods of measuring atmospheric conditions and pollution levels; and more.

This book offers an original critique of the billionaire founders of US West Coast tech companies, addressing their collective power, influence, and ideology, their group dynamics, and the role they play in the wider sociocultural and political formations of digital capitalism.

Interrogating not only the founders' political and economic ambitions, but also how their corporations are omnipresent in our everyday lives, the authors provide robust evidence that a specific kind of patriarchal

power has emerged as digital capitalism's mode of command. The 'New Patriarchs' examined over the course of the book include: Sergey Brin and Larry Page of Google, Elon Musk of Tesla, Jeff Bezos of Amazon, Mark Zuckerberg of Facebook, and Peter Thiel. We also include Sheryl Sandberg. The book analyses how these (mostly) men legitimate their rapidly acquired power, tying a novel kind of socially awkward but 'visionary' masculinity to exotic forms of shareholding. Drawing on a ten million word digital concordance, the authors intervene in feminist debates on patriarchy, masculinity, and postfeminism, locating the power of the founders

as emanating from a specifically racialised structure of oppression tied to imaginaries of the American frontier, the patriarchal household, and settler colonialism. This is an important interdisciplinary contribution suitable for researchers and students across Digital Media, Media and Communication, and Gender and Cultural Studies.

Every time drivers hit the road, they face multiple risks. In their new book *Survive the Drive: A Guide to Keeping Everyone on the Road Alive*, authors Tom Dingus and Mindy Buchanan-King combine years of facts, figures, reports, research, results from the newest and largest driving study ever conducted, and personal anecdotes into the first driving guide of its kind to help drivers understand and handle their everyday risks. This book is meant for everyone to read — adult drivers, teen drivers, senior drivers, professional drivers, and motorcyclists. In 1986, after owning eleven BMWs in three years, Rob Siegel sent an unsolicited article to *Roundel*, the magazine of the BMW Car Club of America. Little did he know that it would kick off 35 years of do-it-yourself automotive writing, and that

his monthly column The Hack Mechanic? would attract a community of like-minded enthusiasts who, like Rob, try to come up with creative workarounds to keep their cars running without taking them to the dealer every time they hiccup. More than just "use 10mm wrench on bolt B" instructions, though, the columns have always been small journeys into passion and problem solving, philosophy lessons disguised as a repair articles, and short stories about getting into and hopefully out of automotive trouble. The Best Of The Hack Mechanic? is a selection of these pieces, including ones on how to buy a vintage BMW and not get burned, the most creative way possible to lock your keys in a running car, why car folks will do just about anything to avoid buying a family

minivan when the money obviously would be so much better spent on "something fun," why a car nut really does need seven cars, why the odds of having a car start is often inversely proportion to the number of cars in the driveway, why finding one of his father's tools is enough to make Rob cry, and why working on your car feels so damned good, all written in Rob's Hack Mechanic voice that hovers somewhere between J.D. Salinger, Bill Bryson, and David Sedaris.

Informative, irreverent, and poignant, *The Best Of The Hack Mechanic?* will have you hoping Rob has another 35 years of columns in him.

Technologies and Approaches to  
Reducing the Fuel Consumption of  
Medium- and Heavy-Duty Vehicles  
evaluates various technologies and  
methods that could improve the fuel  
economy of medium- and heavy-duty  
vehicles, such as tractor-trailers, transit  
buses, and work trucks. The book also  
recommends approaches that federal  
agencies could use to regulate these  
vehicles' fuel consumption. Currently  
there are no fuel consumption  
standards for such vehicles, which  
account for about 26 percent of the  
transportation fuel used in the U.S.  
The miles-per-gallon measure used to  
regulate the fuel economy of passenger  
cars. is not appropriate for medium-

and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction.

Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.

Hydrogen Power: An Introduction to Hydrogen Energy and its Applications explains how hydrogen is produced, used, and handled and shows that the use of chemical hydrogen power has enormous advantages as an energy storage, transport, and use medium. Organized into seven chapters, this book first describes the chemical and physical properties of hydrogen.

Subsequent chapters elucidate the current industrial uses of hydrogen, methods of producing hydrogen, and hydrogen transportation and storage. Hydrogen safety and environmental considerations are also addressed.
