This is a straightforward, no-nonsense instructional book on pistolshooting; specifically competition practical pistol-shooting. Its take-no prisoners style holds nothing back, and eliminates any guess-work related to which techniques work and which ones are outdated. The best way to shoot is using the Isosceles Stance, fact or myth? What about the press-out technique? According to Professor Roger H. Lincoln, there are two rules for success in life: 1. Never tell everything you know. 2. Never tell everything all at once. In this book, Ben Stoeger laughs in the face of this great entrepreneur. Top shooters share a common knowledge which they have collected over the years from a plethora of sources; a knowledge that, in its whole, is far from common to the average shooter in that it is scattered. In this book, the top shooters such as Bob Vogel, Dave Sevigny, and Matt Mink collaborate with the author, Ben Stoeger, to compile the so-called "Grand Master secrets" into one location. The knowledge spans from marksmanship fundamentals to shooting on the move, and competition skills such as stage breakdown and managing match pressure. Finally, this book contains many little tips, drills, and exercises to help you improve your shooting.

Annual Summary of Operations

The overman named Garth sought immortal fame. The oracle told him to serve the Forgotten King to get that fame. But this King sent Garth after a basilisk whose gaze could turn men to stone. What sane use could anyone have for a monster like that?

This beautifully written history recenters the West and rekindles the past in a vivid narrative crafted for beginning students. Grafton and Bell tell the epic story of a West engaged in a continuing search for order across politics, society, and culture, driven by internal tensions and global influences. They deliver the past not as a path to the present but as it was lived at the time, grounded in a balanced, comprehensive, chronological narrative. Combined with rich digital resources to instill practical history skills, The West establishes a dynamic NEW foundation for teaching the Western Civilizations course.

Are you wondering how Americans can compete with nations like China? Are you wondering how, if they can offshore call centers, computer programming, and accounting, there will be any good jobs left they can't offshore? Are you wondering how America can keep importing and running up debt without going bankrupt? Are you wondering how America can be a powerful nation without an industrial base? Are you wondering why the politicians keep denying all of these problems? Are you wondering whether the economics you learned in school and hear on TV is really valid? Are you wondering who you can trust?

This very readable book is aimed at both ordinary concerned citizens and people with a bit of sophistication about economics. It is a systematic examination of why free trade is slowly bleeding America's economy to death and what can be done about it. It explains in detail why the standard economic arguments free traders use all the time are false, and what kind of economic ideas - well within the grasp of the average American - justify protectionism instead. It examines the history and politics of free trade and explains how America came to adopt its present disastrous free trade policy. It looks at the breakdown of specific industries and how we can rebuild them and bring millions of high-paying jobs back to this country. It examines what's wrong with NAFTA, CAFTA, the WTO, and the proposed Trans-Pacific Partnership. It is sharply critical of the current establishment, but from a bipartisan point of view, so it should satisfy progressives, conservatives, and everyone in between. Unlike many past critiques of free trade, it is economically-literate; it also explains New Trade Theory, the hot new area of economics that critiques free trade.

A Pocket Guide to Superstitions of the British Isles

Recognitions is a captivating text dating back to the early Christian church and referenced by early church fathers Origen and Eusebius. The narrative is addressed to James the Just, the Bishop of Jerusalem, and is recorded by one Clement, a Greek, who chronicles a series of discourses by the apostle Peter, which he is witness to while accompanying Peter in his travels. Clement begins his account by detailing his own religious search before hearing of Christ. While in Rome, Clement hears the preaching of Barnabas who testifies of the miracles and teachings of Jesus. Clement, being moved by the words of Barnabas, defends him from a mob and ends up following after him to Palestine where he meets up with Peter. A large portion of the text is devoted to an intriguing disputation between Peter and Simon the Sorcerer before an audience of onlookers. Peter invites Clement to accompany him in his travels from city to city, creating an opportunity for Clement to be instructed more perfectly concerning the faith.

This book constitutes the thoroughly refereed post-conference proceedings of the 1st International Conference on Swarm Intelligence Based Optimization, ICSIBO 2014, held in Mulhouse, France, in May 2014. The 20 full papers presented were carefully reviewed and selected from 48 submissions. Topics of interest presented and discussed in the conference focuses on the theoretical progress of swarm intelligence metaheuristics and their applications in areas such as: theoretical advances of swarm intelligence metaheuristics, combinatorial, discrete, binary, constrained, multi-objective, multi-modal, dynamic, noisy, and large-scale optimization, artificial immune systems, particle swarms, ant colony, bacterial foraging, artificial bees, fireflies algorithm, hybridization of algorithms, parallel/distributed computing, machine learning, data mining, data clustering, decision making and multi-agent systems based on swarm intelligence principles, adaptation and applications of swarm intelligence principles to real world problems in various domains.

The first major new book on British superstitions and their history in over a generation, this survey not only explains what people have believed and why, but when superstitions arose, which parts of the country adopted them, how they evolved and what people believe today. Drawing extensively on literary sources from medieval times to the present, the book settles many arguments, debunks many myths and provides in the process a fascinating sideways view of social customs and beliefs over the centuries.

'The father of science fiction' Guardian The Time Machine is the first and greatest modern portrayal of time-travel. It sees a Victorian scientist propel himself into the year 802,701 AD, when he is initially delighted to find that suffering has been replaced by beauty, contentment and peace. Entranced at first by the Eloi, an elfin species descended from humans, he soon realizes that they are simply remnants of a once-great culture - now weak and childishly afraid of the dark. They have every reason to be afraid: in deep tunnels beneath their paradise lurks another race - the sinister Morlocks. Edited by PATRIC K PARRINDER with an Introduction by MARINA WARNER and notes by STEVEN MCLEAN

This third edition of Understanding Human Rights has been elaborated by the European Training and Research Center for Human Rights and Democracy (ETC) in Graz, originally for the Human Security Network (HSN) at the initiative of the Austrian Ministry for Foreign Affairs. On May 1, 2018, Eric Clopper premiered his one-man play 'Sex & Circumcision: An American Love Story' at Harvard University. This book contains the entire transcript of the play, annotated with additional lines and pictures throughout. In the book-version of Clopper's performance, he takes you through what he dubs "Clopper's Five Censored Facts." You get a crash course in Judaic and American history surrounding circumcision, understand the true functions and value of the foreskin, and then he eviscerates the credibility of America's "scientific" and media communities, exposing the dark ideology that underpins so many of our once-trusted American institutions. The show climaxes in an unapologetic declaration of war on baby mutilation and those who dare perpetuate it and ends with an impassioned appeal to the one thing we all have in common: our shared humanity. Harvard University stoked their book-burning flames with their own free speech policy immediately following the show's public release. Within 24 hours of the online release of Clopper's show, Harvard fired Clopper for his performance despite his show's incredible reception within the Harvard community and online. Now you can read the show "they don't want you to see" in paperback format. Enjoy.
