The year 2019 marked a time of growth and renewed commitments for FAO's Flexible Multi-Partner Mechanism (FMM), the main pooled funding mechanism for resource partners to contribute flexible, voluntary, annual, and multi-year resources to the Organization for the achievement of results under FAO's Strategic Framework and the realization of catalytic impact. This annual report provides an overview of major improvements and transformational changes to the FMM since 2018, in addition to presenting key achievements, challenges, and lessons learned thus far in the implementation of the

However, in many cases, this progress has been hampered by our dependency on critical materials or other resources that are often processed at high environmental burdens. Yet, many studies have shown that environmental and energy issues are strictly interconnected and require a comprehensive understanding of resource management strategies and their implications. Life cycle assessment (LCA) is among the most inclusive analytical techniques to analyze sustainability benefits and trade-offs within complex systems and, in this Special Issue, it is applied

to assess the mutual influences of environmental and energy dimensions. The selection of original articles, reviews, and case studies addressed covers some of the main driving applications for energy requirements and greenhouse gas emissions, including power generation, bioenergy, biorefinery, building, and transportation. An insightful perspective on the current topics and technologies, and emerging research needs, is provided. Alone or in combination with integrative methodologies, LCA can be of pivotal importance and constitute the scientific

This handbook serves as a guide to deploying battery energy storage technologies, specifically for distributed energy resources and flexibility resources. Battery energy storage technology is the most promising, rapidly developed technology as it provides higher efficiency and ease of control. With energy transition through decarbonization and decentralization, energy storage plays a significant role to enhance grid efficiency by alleviating volatility from demand and supply. Energy storage also

It also includes case studies and a concise comparison of the Global Innovation Index (GII) of the four countries, and explores in detail the under-par comparative performance of Qatar, revealing that the country is still at the engagement level of IUGP. Further, it proposes evidence-based recommendations and strategies, making it a valuable resource for researchers, graduate students and

## Comprehensive Introduction

This book examines and analyzes the challenges programmes for Corporate Social Responsibility (CSR) and sustainable development are facing in global management practice. It looks at the dichotomy of a general and popular demand for responsible and resilient management, and the counterplayers that impact the positive effect of such efforts. The book assembles latest research looking at the root causes for this opposition, and new case studies that

showcase the dilemma and possible solutions to overcome it. Overall, the book juxtaposes short terminism within CSR programmes and longer term sustainable development, mis-allocation of resources and failed promises associated with CSR, and sketches pathways how CSR and sustainable development can be directed towards the most pressing issues.

This richly illustrated book written by Professor Kai Peter Birke and several co-authors addresses both scientific and engineering aspects of modern batteries in a unique way. Emphasizing the engineering part of batteries, the book acts as a compass towards next generation batteries for automotive and stationary applications. The book provides distinguished answers to still open questions on how future batteries look like. Modern Battery Engineering explains why and how batteries have to be designed for successful commercialization in e-mobility and stationary applications. The book will help readers understand the principle issues of battery designs, paving

This book is ideal for training courses for readers interested in the field of modern batteries. This book provides one of the most comprehensive and compelling analysis of Non-Market Economies (NMEs) and their treatment under the current world trading system. In particular, it examines the treatment of China as an NME in anti-dumping investigations, especially post-December 2016. Central to this analysis is Section 15 of China ' s Protocol of Accession to the WTO, which is the focal point of the controversy between China and other major WTO Members. The book highlights multiple perspectives on the interpretation of Section 15 and the Second Ad Note to Article VI of the General Agreement on Tariffs and Trade (GATT), which form the legal basis for
