Problem-solving is an art central to understanding and ability in mathematics. With this series of books, the authors have provided a selection of worked examples, problems with complete solutions and test papers designed to be used with or instead of standard textbooks on algebra. For the convenience of the reader, a key explaining how the present books may be used in conjunction with some of the major textbooks is included. Each volume is divided into sections that begin with some notes on notation and prerequisites. The majority of the material is aimed at the students of average ability but some sections contain more challenging problems. By working through the books, the student will gain a deeper understanding of the fundamental concepts involved, and the solution in the formulation, and so solution, of other problems. Books later in the series cover material at a more advanced level than the earlier titles, although each is, within its own limits, self-contained.

The emerging field of family literacy, which cuts across early childhood education, early literacy development, parent education, adult education, and parent-child literacy interactions, has never had a comprehensive volume that pulls together and integrates its many interacting components. That is the mission of this handbook. It provides scholars, students, policymakers, and practitioners (both inside and outside the field) with an invaluable snapshot of its current boundaries and rapidly growing content. With contributions from experts in each of its component fields, it develops an up-to-date picture of existing family literacy programs, of the research and theories that guide these programs, of current issues, and of likely future directions. Key features of this outstanding new book include the following: \*Comprehensive—Whereas many books deal with various components of this broad and loosely coupled field, until now there has never been a book that profiles and integrates its overlapping component fields. \*Recommendations for Practice—Information essential to the development of curriculum and instructional strategies is integrated throughout the book. Practical guidance is offered in such diverse and intersecting areas as early literacy, the role of literature and storybook reading in literacy learning, adult learning needs and strategies, and professional development. \*Cultural and Family Influences—The book examines cultural and family influences on literacy practices and provides effective ways of responding to family diversity, including the needs of bilingual and immigrant participants. \*Program Implementation—Program recommendations cover such distinct topics as integrating the curriculum, enhancing parent-child literacy interactions, and coordinating with other agencies. \*Assessment—To promote future research and evaluation, attention has been focused on ways of assessing children, adults, the educational setting, and implementation strategies. This book is intended for professionals (directors and staff) and graduate students in the areas of family literacy, early childhood education, child development, parenting, and adult education, as well as researchers and policymakers in child development and family literacy.

In the autumn of 1961 Jan Salomon ("Mars") Cramer was appointed to the newly established chair of econometrics at the University of Amsterdam. This volume is published to commemorate this event. It is well-known how much econometrics has developed over the period under consideration, the 25 years that elapsed between 1961 and 1986. This is specifically true for the areas in which Cramer has been actively interested. We mention the theory and measurement of consumer behaviour; money and income; regression, correlation and forecasting. In the present volume this development will be high lighted. Sixteen contributions have been solicited from scholars all over the world who have belonged to the circle of academic friends of Cramer for a shorter or longer part of the period of 25 years. The contributions fall broadly speaking into the four areas mentioned above. Theory and measurement of consumer behaviour is represented by four papers, whereas a fifth paper deals with a related area. Richard Blundell and Costas Meghir devote a paper to the estimation of Engel curves. They apply a discrete choice model to British (individual) data from the Family Expenditure Survey 1981. Their aim is to assess the impact of individual characteristics such as income, demographic structure, location, wages and prices on commodity expenditure.

The 16th annual International Conference on the Principles and Practice of Constraint Programming (CP 2010) was held in St. Andrews, Scotland, during September 6-10, 2010. We would like to thank our sponsors for their generous support of this event. This conference is concerned with all aspects of computing with constraints, including:theory,algorithms,applications,environments,languages,modelsand systems. We received a wide variety of submissions, each of which was reviewed by at least three referees. Referees were chosen for each submission by an initial bidding process where Program Committee members chose papers from their area of interest. The range of expertise represented by the large Program C- mittee meant that almost all submissions were reviewed by subject experts on the Program Committee, or by colleagues chosen by members of the Program Committee for their particular expertise. Papers weresolicitedeither as long (15 page), or short (8 page) submissions. Short-paper submissions were refereed to exactly the same high standards as long-paper submissions but naturally were expected to contain a smaller quantity of new material. Thus there is no disti- tion in these proceedings between short and long papers. I used the excellent EasyChair conference management system to support this process of reviewing, and for the collation and organization of these proceedings. Submissions were made either to the applications track or to the research track. Therewere101(23short)researchtracksubmissionsofwhich36(8short)

wereaccepted,whichisa36%(35%ofshort)acceptancerate. Applicationtrack submissions received special consideration and the acceptance rate was sign- cantly higher than for the research track.

Updating the original, Transforms and Applications Handbook, Third Edition solidifies its place as the complete resource on those mathematical transforms most frequently used by engineers, scientists, and mathematicians. Highlighting the use of transforms and their properties, this latest edition of the bestseller begins with a solid introduction to signals and systems, including properties of the delta function and some classical orthogonal functions. It then goes on to detail different transforms, including lapped, Mellin, wavelet, and Hartley varieties. Written by top experts, each chapter provides numerous examples and applications that clearly demonstrate the unique purpose and properties of each type. The material is presented in a way that makes it easy for readers from different backgrounds to familiarize themselves with the wide range of transform applications. Revisiting transforms previously covered, this book adds information on other important ones, including: Finite Hankel, Legendre, Jacobi, Gegenbauer, Laguerre, and Hermite Fraction Fourier Zak Continuous and discrete Chirp-Fourier Multidimensional discrete unitary Hilbert-Huang Most comparable books cover only a few of the transforms addressed here, making this text by far the most useful for anyone involved in signal processing—including electrical and communication engineers, mathematicians, and any other scientist working in this field.

In this book, prominent Russian scientist Yuriy I. Khavkin shows that the droplet sizes in swirl atomizers depend only on the specific energy of the liquid drops and on viscosity. The new theory based only on two parameters is shown to be far simpler and in better agreement with experimental data than any previous presentations. The following topics are included in the book: The solution of the Navier-Stokes equation for a liquid rotating flow - Atomizers for gas turbine combustion chambers - Atomizers for high capacity steam boilers - Atomizers for liquid-propellant rocket engines - Quality of liquid atomization by non-swirl atomizers - A unique table of experimental data of 232 atomizers, enables the reader to find an atomizer with the flow rate from 5 kg/hr to 15,000 kg/hr Readers will also learn: - To create an atomizer with the given mean droplet size - To create an atomizer with the given droplet size distribution - To create an atomizer with the given flow rate control. The book is intended for the design engineer, as well as the theoretical scientist.

Prioritarianism is an ethical theory that gives extra weight to the well-being of the worse off. In contrast, dominant policy-evaluation methodologies, such as benefit-cost analysis, cost-effectiveness analysis, and utilitarianism, ignore or downplay issues of fair distribution. Based on a research group founded by the editors, this important book is the first to show how prioritarianism can be used to support prioritarianism as a methodology to evaluate governmental policy across a variety of policy domains: taxation, health policy, risk regulation, education, climate policy, and the COVID-19 pandemic. It is also the first to demonstrate how prioritarianism improves on GDP as an indicator of a society's progress over time. Edited by two senior figures in the field with contributions from some of the world's leading experts, this book is a must-read for anyone interested in the ethical implications of public policy.
