Controlling the level of noise in electrical motors is critical to overall system performance. However, predicting noise of an electrical motor is more difficult and less accurate than for other characteristics such as torque-speed. Recent advances have produced powerful computational methods for noise prediction, and *Noise of Polyphase Electric Motors* is the first book to collect these advances in a single source. It is also the first to include noise prediction for permanent magnet (PM) synchronous motors. Complete coverage of all aspects of electromagnetic, structural, and vibro-acoustic noise makes this a uniquely comprehensive reference. The authors

begin with the basic principles of noise generation and radiation, magnetic field and radial forces, torque pulsations, acoustic calculations, as well as noise and vibration of mechanical and acoustic origin. Moving to applications, the book examines in detail stator system vibration analysis including the use of finite element method (FEM) modal analysis; FEM for radial pressure and structural modeling; boundary element methods (BEM) for acoustic radiation; statistical energy analysis (SEA); instrumentation including technologies, procedures, and standards; and both passive and active methods for control of noise and vibration. Noise of Polyphase Electric Motors gathers the fundamental concepts along with all of the analytical, numerical, and statistical methods into a unified

This book was inspired by the inaugural National Roundtable on Environmental and Sustainability Education in Canadian Faculties of Education (Roundtable 2016), which took place June 14-16, 2016, at Trent University in Peterborough, Ontario. Roundtable 2016 brought together over seventy participants from across Canada, including educators, researchers, policy-makers, consultants, and community organizations. Over the course of three days, participants took part in keynote addresses, research colloquia, networking socials, and collaborative inquiry activities focused on Environmental Sustainability

Education in Teacher Education (ESE-TE). Roundtable 2016 resulted in the publication of a National Action Plan containing action-oriented recommendations for enhancing ESE-TE, and a position statement titled “The Otonabee Declaration,” where delegates articulated their views regarding environmental degradation, the critical need for enhancing ESE-TE, and, the role educators, children, youth, educational institutions, policy makers, and Indigenous communities play in enhancing ESE-TE in Canada. This volume concludes with a discussion placing current Canadian ESE-TE theory and practice within an international context.

The book aims to integrate our understanding of mammalian societies into a novel synthesis that is relevant to behavioural ecologists, ecologists, and anthropologists. It adopts a coherent structure that deals initially with the characteristics and strategies of females, before covering those of males, cooperative societies and hominid societies. It reviews our current understanding both of the

How language users from different linguistic backgrounds cope with

forms of complexity is still a territory with many unanswered questions. The current book is concerned with morphologically and syntactically complex items, that is, derivatives, inflected forms, compounds, phrases and forms related by agreement and examines how these constructions are acquired and learned in a great range of different languages, such as Turkish, Welsh, Basque and Catalan. Relying on a variety of methodologies targeting production or comprehension, among

others, lexical decision and priming experiments, an EEG study, a corpus analysis and a reading test, the authors consider data from native speakers mastering one or more languages and second-language users. Overall, the volume reflects upon and contributes to our understanding of how the peculiarities of language and its users affect the learnability of complex forms.

Are Western epistemology, metaphysics, methodology and the philosophy of science grounded only in men's distinctive understandings of themselves, others, and nature? Does this less than human understanding distort our models of reason and of scientific inquiry? In different

They identify how it is distinctively masculine perspectives on masculine experience which have shaped the most fundamental and formal aspects of systematic thought in philosophy and the natural and social sciences - precisely the aspects of thought believed most gender-neutral.
