The U.S. did not become the world's foremost military air power by accident. The learning curve--World War I, World War II, the Korean Vietnam War, the Gulf War, and more recently the war on terror--has been steep. While climbing this curve, the U.S. has not only out-g opposition, producing superior military aircraft in greater numbers than its foes, but has out-trained them, too. This book provides a co historical survey of U.S. military training aircraft, including technical specifications, drawings and photographs of each type of fixed and design used over a 98-year period to accomplish the first step of the learning process: the training of pilots and aircrews.

A Handbook on Where to Find Them

"Although most economists maintain a mistrust of a government's goals when it intervenes in an economy, many continue to trust its actual ability. They retain, in other words, a faith in state competence. For this faith, they adduce no evidence. Sharing little skepticism about the government's ability, they continue to expect the best of governmental intervention. To study government competence in World War II Japan offers an intriguing laboratory. In this book, Yoshiro Miwa shows that the Japanese government did not conduct requisite planning for the war by any means. It made its choices on an ad hoc basis and the war itself quickly became a dead end. That the government planned for the war incompetently casts doubts on the accounts of Japanese government leadership more generally"--
