The 5 Elements of Effective ThinkingPrinceton University Press

How the concept of critical thinking emerged, how it has been defined, and how critical thinking skills can be taught. Critical thinking is regularly cited as an essential twenty-first century skill, the key to success in school and work. Given our propensity to believe fake news, draw incorrect conclusions, and make decisions based on emotion rather than reason, it might even be said that critical thinking is vital to the survival of a democratic society. But what, exactly, is critical thinking? In this volume in the MIT Press Essential Knowledge series, Jonathan Haber explains how the concept of critical thinking emerged, how it has been defined, and how critical thinking skills can be taught and assessed. Haber describes the term's origins in such disciplines as philosophy, psychology, and science. He examines the components of critical thinking, including structured thinking, language skills, background knowledge, and information literacy, along with such necessary intellectual traits as intellectual humility, empathy, and open-mindedness. He discusses how research has defined critical thinking, how elements of critical thinking have been taught for centuries, and how educators can teach critical thinking skills now. Haber argues that the most important critical thinking issue today is that not enough people are doing enough of it. Fortunately, critical thinking can be taught, practiced, and evaluated. This book offers a guide for teachers, students, and aspiring critical thinkers everywhere, including advice for educational leaders and policy makers on how to make the teaching and learning of critical thinking an educational priority and practical reality.

Research Paper (undergraduate) from the year 2008 in the subject Business economics - General, grade: 92,5, University of Phoenix, course: MGT 350 Critical Thinking: Strategies in Decision Making, language: English, abstract: Applying Critical Thinking to a Work Related Decision Critical thinking is a multi step process that aids individuals in problem solving which is to identify real problems and

finding a strategy to fix the problem. Many forms of decision-making models involve critical thinking process. In most cases, critical thinking is based on several foundations. Trabant (2002) comments that critical thinking can be divided into four steps: “identifying the problem, explore interpretations and connections, prioritize alternatives and communicate conclusions, and integrate, monitor, and refine strategies for re-addressing the problem” (p.1, ¶2-5). Within these steps individuals can generate possibilities, analyze, compare and contrast, infer and interpret, and evaluate and met cognition (Critical thinking crucial to global success, 2002, p.2, ¶7). As a result, the ability to identify and apply each of these critical thinking components is important to good decision making. Before applying critical thinking, an individual must be aware of the four fundamental steps that occur in the decision cycle. According to Helliwell (2002) four fundamental steps that occur in the decision cycle are: Analyzing the problem or opportunity to understand the need for a decision, Integrating and weighing the importance of all sources of information, Applying commercial intuition to the logic of the decision as it takes shape, and often referred to as ‘Gut Instinct’, the value of commercial intuition should not be downplayed when analyzing the potential positive and negative impacts of the decision (p.45, ¶7). When applying critical thinking during the decision making process in business, shrewd, wiser, constructive, and productive decisions and results often occur.

Teaching Cross-Cultural Values came out of the need to give students an interactive experience with the course materials, and to be able to gently coax them to reevaluate their own values and concepts on diverse cultures in a relatively safe--comfortable--atmosphere. To do that I had to put the focus on them and lead them through the steps by helping them develop critical thinking skills--skills that once developed and embedded as a thinking tool would continue to help students meet the challenge of questioning what they see and experience, and then analyze their own thinking processes to understand those different from them for long after they leave the classroom. The critical reasoning skills explored in this collection of interactive activities are: 1. Analytical Thinking & Critical Analysis 2. Associative Thinking 3. Creative Thinking 4. Critical Thinking 5. Evaluative Thinking 6. Hypothesis Problem Solving 7. Inductive-Deductive Thinking 8. Perceptual Thinking--Interpretation & Summarizing 9. Questioning 10. Synthesizing
