

53 Strategies To Get More Listings: Real Estate Agents That REALLY Work

Glioblastoma Resistance to Chemotherapy: Molecular Mechanisms and Innovative Reversal Strategies brings current knowledge from an international team of experts on the science and clinical management of glioblastoma chemoresistance. The book discusses topics such as molecular mechanisms of chemoresistance, experimental models to study chemoresistance, chemoresistance to drugs other than Temozolomide, and specific strategies to reverse chemoresistance. Additionally, it encompasses information on how to mitigate chemoresistance by targeted enhancement of p53 function. This book is a valuable resource for cancer researchers, oncologists, neuro-oncologists and other members of the biomedical field. Glioblastoma (GBM) is the most invasive and malignant primary brain tumor in humans with poor survival after diagnosis, therefore it is imperative that molecular and cellular mechanisms behind therapy resistant GBM cells, as well as the therapeutic strategies available to counter the resistance are comprehensively understood. Provides comprehensive, core knowledge related to the entire discipline of glioblastoma chemoresistance, from its many etiological mechanisms, to specific strategies to reverse resistance Presents current information from an international team of experts on the basic science, pre-clinical research, and clinical management of glioblastoma chemoresistance Discusses molecular and cellular mechanisms behind therapy resistant glioblastoma cells, as well as the therapeutic strategies available to counter this resistance

Genome Stability: From Virus to Human Application, Second Edition, a volume in the Translational Epigenetics series, explores how various species maintain genome stability and genome diversification in response to environmental factors. Here, across thirty-eight chapters, leading researchers provide a deep analysis of genome stability in DNA/RNA viruses, prokaryotes, single cell eukaryotes, lower multicellular eukaryotes, and mammals, examining how epigenetic factors contribute to genome stability and how these species pass memories of encounters to progeny. Topics also include major DNA repair mechanisms, the role of chromatin in genome stability, human diseases associated with genome instability, and genome stability in response to aging. This second edition has been fully revised to address evolving research trends, including CRISPRs/Cas9 genome editing; conventional versus transgenic genome instability; breeding and genetic diseases associated with abnormal DNA repair; RNA and extrachromosomal DNA; cloning, stem cells, and embryo development; programmed genome instability; and conserved and divergent features of repair. This volume is an essential resource for geneticists, epigeneticists, and molecular biologists who are looking to gain a deeper understanding of this rapidly expanding field, and can also be of great use to advanced students who are looking to gain additional expertise in genome stability. A deep analysis of genome stability research from various kingdoms, including epigenetics and transgenerational effects Provides comprehensive coverage of mechanisms utilized by different organisms to maintain genomic stability Contains applications of genome instability research and outcomes for human disease Features all-new chapters on evolving areas of genome stability research, including CRISPRs/Cas9 genome editing, RNA and extrachromosomal DNA, programmed genome instability, and conserved and divergent features of repair

Each year the most prominent authorities in the field come together at the Heckerling Institute on Estate Planning to discuss and analyze the most important developments in the areas of estate planning and estate, gift, and income taxation. Now in its fifty-third year, the Heckerling Institute is widely regarded as the premier estate planning program in the country. This one-volume publication provides cutting-edge articles based on the podium lectures delivered at the Heckerling Institute. Hot topics for this year's Institute include: • Annual Review of Estate Planning Developments • IRC Section 199A • Powers of Appointment • Charitable Giving

This book examines and evaluates the strategies utilized to design and synthesize pharmaceutically active agents. Significant updates over the last 10 years since the publication of the 1st edition include synthesis of enantiomerically pure isomers, novel chemical methodologies, and new pharmaceutical agents targeted at novel biological endpoints. Written by an experienced successful author, this book meets the needs of a growing community of researchers in pharmaceutical R &D, as well as medical professionals, by providing a useful guide for designing and synthesizing pharmaceutical agents. Additionally, it is a useful text for medicinal chemistry students.

Imperatives and directive strategies have intrigued both formalists and functionalists. They continue to search for the answers to questions like "what are the semantic "how is it used (in the world's languages)?" and "which factors determine the choice between imperatives and other directive strategies?". This volume takes a broadly perspective and contributes to the literature in several respects. It presents new data from a variety of languages, some of which have not been studied in depth before, the benefits of traditional methodologies as well as the potential of more innovative ones. In addition, the volume sheds new light on the imperative as a typological notion and its interaction with other grammatical categories. It also offers new insights into the relation between different directive strategies within and across languages and (dis)similarities between equivalent directive strategies in a language family.

This book is the first to empirically examine the role of non-competition interests (public policy) in the enforcement of the EU's prohibition on anti-competitive agreements. Using an original quantitative and qualitative database of over 3,100 cases, this book records all of the public enforcement actions of Article 101 TFEU taken by the Commission, national competition authorities and courts of five representative Member States (France, Germany, Hungary, the Netherlands, and the UK). The book not only exposes

non-competition interests played a role, but also sheds light on the “dark matter” of balancing, namely, invisible forms of balancing triggered by the institutional and pro-competition enforcers. Moreover, it contributes to the empirical-legal study of various other aspects of EU competition law enforcement, such as its objectives, the multi-decentralized enforcement, and the functioning and success of Regulation 1/2003.

You are Gorgeous (Even If You Don't Know It Yet!) "You Are Beautiful! 53 Easy Ways To Love Your Imperfect Self" is a practical step-by-step guide to feeling wonderful about how you look right now. If you don't feel happy in your own skin, it can form a shadow over your whole life. Yet you can use the 53 simple strategies in this book to gain confidence in your appearance that will boost your emotional well-being and allow you to live the life you are meant to live. There's no need to hold back on anything about yourself. This book is for you if you wish you were more beautiful or slimmer or had thicker hair or more or less of anything that stops you looking good you think your appearance that mean you will never be attractive you hate anyone looking at you or having your picture taken you feel you miss out on fun because you don't look like you would love to have more confidence You'll discover how to appreciate the unique things about you how to cope with teasing and criticism how to shake off gloomy thoughts how to enjoy being you how to make the mirror your friend not your enemy how to focus on the things that boost your confidence and avoid the things that leech it how to avoid common pitfalls to feeling good about yourself how to take one step at a time to feel great all the time After reading this book, you will know how to celebrate your achievements are worth the party! If you'd like to feel great about yourself, get a copy of this book today and get started. Note: This book is not for you if you have a deep psychological condition known as Body Dysmorphic Disorder. In that case, please seek professional help to get well again. It is for you if you just wish you were prettier, lack confidence over your appearance, improve your self-image so you feel happier with yourself.

Heterocycles feature widely in natural products, agrochemicals, pharmaceuticals and dyes, and their synthesis is of great interest to synthetic chemists in both academic and industrial settings. Contributions of recent applications of new methodologies in C–H activation, photoredox chemistry, cross-coupling strategies, borrowing hydrogen catalysis, multicomponent reactions, regio- and stereoselective syntheses, as well as other new, attractive approaches for the construction of heterocyclic scaffolds are of great interest. This Special Issue featuring the latest research that is ongoing in the field of heterocyclic synthesis. It is expected that most submissions will focus on five- and six-membered oxygen and nitrogen heterocycles, but structures incorporating other rings/heteroatoms will also be considered. Original research (communications, full papers and reviews) that discusses novel methodologies for assembling heterocycles with potential application in materials, catalysis and medicine are therefore welcome.

How to Be a More Successful Language Learner incorporates the latest thinking about learner strategies and language learning. Language learners and teachers alike discover the psychological, linguistic, and practical aspects of the successful acquisition of a new language.

“Talent matters. No one denies this fact. But, there is often a gap between wanting and getting talent. Cathy Fyock’s 53 ‘Truths’ provide concrete, practical, and well-tested ideas to close the talent gap. The ideas are reasonable, grounded in research, and actionable. This is an excellent book for those who pay attention to hiring. The 53 Truths offer a roadmap for doing this important task more effectively.” Dave Ulrich, Professor of Business, University of Michigan, Partner, The RBL Group “You think you knew everything you needed to know about employment until you read the most recent, catchy FT Press ‘Truth’ book by staffing expert Cathy Fyock. In only 224 pages Fyock effectively uses 53 ‘Truths’ to challenge many of HR’s long-standing assumptions and practices related to recruitment and selection. With everyone wanting to ‘hire the best,’ this quick read has a high ROI.” Michael R. Losey, SPHR, CAE, Former CEO, Society for Human Resource Management “Cathy Fyock knows there is no ‘silver bullet’ when it comes to successful recruiting and hiring—and that passive tactics do not provide high quality results. She knows the truth: Today’s low unemployment rates combined with increasing retirements of Baby Boomers spell trouble for employers hoping to expand. Her fresh approach shows the reader that there are numerous opportunities to connect with great future employees, and she provides practical advice for tapping multiple sources simultaneously, as well as interviewing and making offers. If you want to hire the best, this book is your guide!” Nancy S. Ahlrichs, SPHR, President, EOC Strategies, LLC Great business results start with great talent. Get it—and keep it! This book reveals 53 Proven Hiring Principles and bite-size, easy-to-use techniques that work. □ The truth about finding hidden sources of talent □ The truth about making great people want to work for you □ The truth about interviewing: asking the right questions Getting the best people for your organization is not only difficult, but the strategies for getting the best often are not obvious. To get the best you first need to identify who the best are, then determine how to reach the best, and then decide on the best among the best you want to hire. In The Truth About Hiring the Best you will learn:

it's not just a job to fill; it's your organization's future that you're creating; getting the best isn't just about asking the right questions, it's about listening for the right answers; and great people don't want to work for desperate employers. It's a war for talent, and you need to win.

A collection of brand new general scripts from Lynda Hudson, author of Scripts and Strategies in Hypnotherapy with Children ISBN: 9781845901394. This book covers: Also included is the use of Hypnotic Language and suggestions for varying scripts for particular clients. This volume is an outstanding complement to Roger Allen's now classic Scripts and Strategies in Hypnotherapy ISBN: 9781904424215 and will be welcomed by beginner and experienced practitioners alike. Lynda Hudson, a former teacher, is a clinical hypnosis practitioner who specialises in working with children. She is a lecturer in clinical hypnosis at the London College of Clinical Hypnosis (LCCH) and provides master classes in using hypnosis with children. Covers: Anxiety; Panic Attacks; Phobias; Sexual problems; Breaking habits; Sporting performance; Managing dyslexia and related; Social stigma; Essential tremor; Tics and twitches; Urinary incontinence; IBS; Pain control; Preparation for and recovery from childbirth; Sleeping difficulties; Speaking in groups, meetings, conferences etc; Enhanced business performance; Preparation and recovery from surgery and illness; Coping with mild to moderate depression; Recovering memory (not recovering traumatic memory)

In 2008, life blessed my husband, Sean, and me with two healthy babies. We have an engaging and magnetic tale of parenting with unique learning strategies on the go that all parents can benefit from; however, this book is far more than that. As a professional educator, I saw how both everyday events like planning food and clothing and planning special trips like a visit to Disney World were gateways to introducing children to life skills and to nurturing cognitive development through learning strategies. With minimal planning time, any parent can use these strategies to inspire their children to learn, and the best part is that the planning and the execution of the plans are fun and exciting. Each chapter is devoted to exposing children to diverse learning strategies: strategies to elicit proper behavior in public events, strategies for choosing souvenirs as teaching tools, and strategies to journal your children's precious life events. The concluding chapter is a strategy unit guide for learning during a special trip—in this case, New York City—and we got to test that guide in June 2013.

Therapeutic Strategies to Overcome ALK Resistance in Cancer, Volume 13, presents current strategies to improve and prolong clinical benefit in ALK driven cancers. Most patients with ALK-driven cancer are sensitive to tyrosine kinase inhibitor (TKI) therapy, but resistance invariably develops.

This book discusses topics such as structure and function of ALK, ALK rearranged lung cancer, resistance mechanisms to ALK TKI tumors, and novel therapeutic strategies to enhance crizotinib anti-tumor efficacy in ALCL. Additionally, it encompasses information on drug combinations to enhance ALK TKI anti-tumor efficacy in neuroblastoma and future perspectives in the field. This book is a valuable resource for cancer researchers, clinicians and several members of biomedical field who need to understand more about how to fight ALK resistance in cancer treatment. Explains the biology of ALK RTK, focusing on its tissue expression, structure and functionality Presents an overview of current treatments and the benefits of ALK TKI in lung and other cancer types, such as ALCL, neuroblastoma and inflammatory myofibroblastic tumor Encompasses information on systemic treatments other than TKI, including chemotherapy, immunotherapy and antiangiogenic agents in ALK-driven NSCLC

Care and use of animals in research are expensive, prompting efforts to contain or reduce costs. Components of those costs are personnel, regulatory compliance, veterinary medical care, and laboratory animal management, equipment, and procedures. Many efforts have been made to control and reduce personnel costs, the largest contributing factor to cost, through better facility and equipment design, more efficient use of personnel, and automation of many routine operations. However, there has been no comprehensive, recent analysis of the various cost components or examination of the strategies that have been proven or are purported to decrease the cost of animal facility operation. Strategies that Influence Cost Containment in Animal Research Facilities examines the current interpretation of governmental policy (Office of Management and Budget Circular A-21) concerning institutional reimbursement for overhead costs of an animal research facility and describes methods for economically operating an animal research facility. This report develops recommendations by which federal auditors and research institutions can establish what cost components of research animal facilities should be charged to institutions' indirect cost pool and what animal research facility cost components should be included in the per diem charges to investigators, and assesses the financial and scientific ramifications that these criteria would have

among federally funded institutions. Further, the report determines the cost components of laboratory animal care and use in biomedical research and assesses and recommends methods of cost containment for institutions maintaining animals for biomedical research.

From a supply chain perspective, often big differences exist between global raw material suppliers' approaches to supply their respective local markets. The progressing complexity of large centrally managed global supply networks and their often-unknown upstream ramifications increase the likelihood of undetected bottlenecks and inefficiencies. It is therefore necessary, to develop an approach to strategically master the upstream complexity of such networks from a holistic perspective, in order to align regional competitive priorities and supply chain structures. The research is set in the context of polyamide engineering thermoplastics in the automotive industry. Based on an initial industry analysis and a literature review, a conceptual framework is developed. The framework is matched with existing empirical and theoretical literature, as well as multiple case study analyses in the relevant supply market and a centrally managed global supply network. As a result, strategic group theory is transferred into the supply network management context, to allow for the consideration of upstream supply chain structures in the category strategy development process. The proposed approach introduces strategic groups of supply chains as a segmentation criterion for complex global supply networks, which enables the network-wide alignment of competitive priorities, flexibility requirements, and partnerships with suppliers. Supply chain-based category strategies can effectively reduce the complexity firms are facing in this context. The results of this research are applicable for certain types of global supply networks, and can be used for network alignment and strategy development. The approach can furthermore generate valuable insights useable for negotiation support with suppliers.

If you teach adults, 53 Interesting Ways of Helping Your Students to Study is designed to help you. It provides practical suggestions, each tried and tested, for helping students to improve their learning in class and at home. The authors demonstrate how educators can effectively support students through the whole learning process: beginning to study; planning one's studying; studying through reading; taking notes; writing; learning with others; using library resources; revision; and exams. Whether you're new to teaching and keen to develop good strategies, or more experienced and looking to expand your repertoire, 53 Interesting Ways of Helping Your Students to Study is a handy guide to keep on your desk.

Glioblastoma Resistance to Chemotherapy: Molecular Mechanisms and Innovative Reversal Strategies

Editor-in-Chief, Dr. Gregory Ciottoni, and Associate Editors, Dr. Philip D. Anderson, Dr. Erik Auf Der Heide, Dr. Robert G. Darling, Dr. Irving Jacoby, Dr. Eric Noji, and Dr. Selim Suner, recognized worldwide as authorities in the field, bring you this brand-new reference, which offers comprehensive yet succinct guidance on the preparation, assessment, and management of a full range of disasters, both natural and man-made (including terrorist attacks and the threat of biological warfare). More than 200 contributors carefully outline the basics of disaster management and provide guidance on more than 100 specific disaster situations. Part 1 offers an A to Z source for information on every aspect of disaster medicine and management. Part 2 features an exhaustive compilation of every conceivable disaster event, organized to facilitate fast reference in a real-time setting. The second part of the book also serves as a quick consult on disaster medicine. Presents a full range of coverage from the basics of disaster medicine to more advanced concepts, such as tactical EMS, hazard vulnerability analysis, impact of disaster on children, and more. Discusses identification of risks, planning of organization and equipment, and education and training. Includes individual Concepts and Events sections that provide information on the general approach to disaster medicine and practical information on specific disasters. Offers comprehensive coverage of natural disasters, accidental disasters, transportation disasters, and intentional events. Includes an exhaustive list of chapters on the conceivable chemical and biologic weapons known today. Features a practical chapter organization throughout that covers description of event, pre-incident considerations, post-incident considerations, medical treatment of casualties, unique considerations, pitfalls, case presentations, and suggested reading. Discusses the management of future events, or possible scenarios, for which there is no precedent.

This book describes important developments and emerging trends in experimental and clinical cancer gene therapy. It reflects the tremendous advances made over recent years with respect to immunogenes, suicide genes and gene correction therapies, as well as in gene suppression and miRNA therapies. Many of the described strategies focus on the generation of more efficient and specific means of attack at known and novel cellular targets associated with tumor development and progression. The book also details parallel improvements in vector design, vector delivery, and therapeutic efficacy. It offers readers a stimulating, broad overview of advances in the field, linking experimental strategies to their clinical applications.

In Loyalty Myths, the authors have assembled 53 of the most common beliefs about customer loyalty – all of them wrong or misconceived! Each of the beliefs in this book is debunked with real-world examples. While other books speak in platitudes; this book is the only one to validate each proposition with real data. Granted unprecedented access to customer records from a variety of multi-national corporations. Through these records, Ipsos Loyalty was able to precisely track the impact of this customer-centric construct on actual purchasing behavior.

The authors' findings and conclusions will stun business leaders around the world. The lessons learned from these provide a true guide for the proper use of customer loyalty.

The present book on Molecular & Diagnostic Imaging and Treatment Strategies of ovarian cancer is one of two companion books with the second one being focused on Cell and Molecular Biology of Ovarian Cancer. Both books include new exciting aspects of ovarian cancer research with chapters written by experts in their respective fields who contributed their unique expertise in specific ovarian cancer research areas and include cell and molecular details that are important for the specific subtopics. Comprehensive and concise reviews are included of

key topics in the field.

Lectures remain a staple form of teaching in higher and professional education, yet presenting doesn't come naturally to most of us. 53 Interesting Things to do in your Lectures provides practical suggestions, each tried and tested, for developing really effective lectures and presentations across all disciplines. The authors cover the full presentation process, from structuring the lecture, to use of illustrations and technology, techniques to attract and sustain student attention, active learning strategies, and dealing with questions. Whether you're new to lecturing and training and keen to develop good presentation technique, or more experienced and looking to expand your repertoire, 53 Interesting Things to do in your Lectures is a handy guide to keep on your desk.

Geopolitical shifts, increasing demands for accountability, and growing competition have been driving the need for change within transnational nongovernmental organizations (TNGOs). As the world has changed and TNGOs' ambitions have expanded, the roles of TNGOs have shifted and their work has become more complex. To remain effective, legitimate, and relevant in the future necessitates organizational changes, but many TNGOs have been slow to adapt. As a result, the sector's rhetoric of sustainable impact and social transformation has far outpaced the reality of TNGOs' more limited abilities to deliver on their promises. Between Power and Irrelevance openly explores why this gap between rhetoric and reality exists and what TNGOs can do individually and collectively to close it. George E. Mitchell, Hans Peter Schmitz, and Tosca Bruno-van Vijfeijken argue that TNGOs need to change the fundamental conditions under which they operate by bringing their own "forms and norms" into better alignment with their ambitions and strategies. This book offers accessible, future-oriented analyses and lessons-learned to assist practitioners and other stakeholders in formulating and implementing organizational changes. Drawing upon a variety of perspectives, including hundreds of interviews with TNGO leaders, firsthand involvement in major organizational change processes in leading TNGOs, and numerous workshops, training institutes, consultancies, and research projects, the book examines how to adapt TNGOs for the future.

An essential guide to healthcare data problems, sources, and solutions Strategies in Biomedical Data Science provides medical professionals with much-needed guidance toward managing the increasing deluge of healthcare data. Beginning with a look at our current top-down methodologies, this book demonstrates the ways in which both technological development and more effective use of current resources can better serve both patient and payer. The discussion explores the aggregation of disparate data sources, current analytics and toolsets, the growing necessity of smart bioinformatics, and more as data science and biomedical science grow increasingly intertwined. You'll dig into the unknown challenges that come along with every advance, and explore the ways in which healthcare data management and technology will inform medicine, politics, and research in the not-so-distant future. Real-world use cases and clear examples are featured throughout, and coverage of data sources, problems, and potential mitigations provides necessary insight for forward-looking healthcare professionals. Big Data has been a topic of discussion for some time, with much attention focused on problems and management issues surrounding truly staggering amounts of data. This book offers a lifeline through the tsunami of healthcare data, to help the medical community turn their data management problem into a solution. Consider the data challenges personalized medicine entails Explore the available advanced analytic resources and tools Learn how bioinformatics as a service is quickly becoming reality Examine the future of IOT and the deluge of personal device data The sheer amount of healthcare data being generated will only increase as both biomedical research and clinical practice trend toward individualized, patient-specific care. Strategies in Biomedical Data Science provides expert insight into the kind of robust data management that is becoming increasingly critical as healthcare evolves.

The goal of this book is to better help you understand how to think about price action. These are the strategies Oliver developed through trial and error over the last ten plus years. This book should help you better target the correct stocks with upside potential, utilize multiple timeframes in your analysis, understand low risk areas to buy, how to manage stops, and when

to sell. We hope this can reduce your learning curve as you take on the endeavor of creating your own strategy beating the market.

Help students write about mathematics content! This 2nd edition resource was created to support College and Career Readiness Standards, and provides in-depth research about content-area literacy instruction, including key strategies to help students write about and comprehend mathematics content. Each strategy includes classroom examples by grade ranges (1-2, 3-5, 6-8 and 9-12) and necessary support materials, such as graphic organizers, templates, or digital resources to help teachers implement quickly and easily. Specific suggestions for differentiating instruction are also provided to help English language learners, gifted students, and students reading below grade level.

This edition contains diagnostic strategies for 55 common medical problems to guide clinicians in the critical appraisal of evidence-based medicine through quantitative decision making. New chapters include peptic ulcer, osteomyelitis, acute sinusitis, osteoporosis, and ovarian cancer.
