trading is the buying and selling of securities in one single trading day. This can occur in any type of marketplace that you choose, but it is most common in the stock market and the forex market. Day trading is very fast-paced. You will purchase a stock, bond, option or other security at some point during the day. Then, sometime during the same day, you will sell the security. If you watched the market correctly and the trade goes well, you will make a profit from that sale. If you made a mistake with your calculations, you will lose money. Day trading is a strategy of trading financial securities, such as stocks and currencies, where positions are taken and closed within the same day.

Also called short trading, it involves buying financial securities and selling them before the trading day closes. How short can day trading last? It can be as short as buying and selling in a few minutes, or even seconds! The point is to end the trading day with a square position, i.e., neither long nor short on any financial security. It doesn't matter how many trades you do during the day. You can trade just once a day or ten times a day...it doesn't matter. The defining characteristic of day trading is ending the day with a square position. This book covers the following topics:
