

Across A Summer Sea: A Warm Hearted, Dramatic And Nostalgic Saga

Inspired by a little-known chapter of World War II history, a young Protestant girl and her Jewish neighbour are caught up in the terrible wave of hate sweeping the globe on the eve of war in this powerful love story that's perfect for fans of The Guernsey Literary and Potato Peel Pie Society. If you're reading this letter, that means I'm dead. I had obviously hoped to see you again, to explain in person, but fate had other plans. 1933 At eighteen years old, Molly Ryan dreams of becoming a journalist, but instead she spends her days working any job she can to help her family through the Depression crippling her city. The one bright spot in her life is watching baseball with her best friend, Hannah Dreyfus, and sneaking glances at Hannah's handsome older brother, Max. But as the summer unfolds, more and more of Hitler's hateful ideas cross the sea and "Swastika Clubs" and "No Jews Allowed" signs spring up around Toronto, a city already simmering with mass unemployment, protests, and unrest. When tensions between the Irish and Jewish communities erupt in a riot one smouldering day in August, Molly and Max are caught in the middle, with devastating consequences for both their families. 1939 Six years later, the Depression has eased and Molly is a reporter at her local paper. But a new war is on the horizon, putting everyone she cares about most in peril. As letters trickle in from overseas, Molly is forced to confront what happened all those years ago, but is it too late to make things right?

From the desperate streets of Toronto to the embattled shores of Hong Kong, Letters Across the Sea is a poignant novel about the enduring power of love to cross dangerous divides even in the darkest of times—from the #1 bestselling author of The Forgotten Home Child.

This book is a product of the joint JGOFS (Joint Global Ocean Flux Study)/LOICZ (Land–Ocean Interactions in the Coastal Zone) Continental Margins Task Team which was established to facilitate continental margins research in the two projects. It contains significant information on the physical, biogeochemical, and ecosystems of continental margins nationally and regionally and provides a very valuable synthesis of this information and the physical, biogeochemical and ecosystem processes which occur on continental margins. The publication of this book is timely as it provides a very strong foundation for the development of the joint IMBER (Integrated Marine Biogeochemistry and Ecosystems Research)/LOICZ Science Plan and Implementation Strategy for biogeochemical and ecosystems research in the continental margins and the impacts of global change on these systems. This initiative will move forward integrated biogeochemical and ecosystems research in the continental margins. We thank all the contributors to this volume and especially Kon-Keo Liu who has dedicated a great deal of time to ensuring a high-quality book is published. IMBER Scientific Steering Committee Julie Hall LOICZ Scientific Steering Committee Jozef Pacyna v 1 Preface In general, interfaces between the Earth's larger material reservoirs (i. e. , the land, atmosphere, ocean, and sediments) are important in the control of the biogeochemical dynamics and cycling of the major bio-essential elements, including carbon (C), nitrogen (N), phosphorus (P), sulfur (S), and silicon (Si), found in organic matter and the inorganic skeletons, shells, and tests of benthic and marine organisms.

The first comprehensive review of the current and future effects of climate change on the world's fisheries and aquaculture operations The first book of its kind, Climate Change Impacts on Fisheries and Aquaculture explores the impacts of climate change on global fisheries resources and on marine aquaculture. It also offers expert suggestions on possible adaptations to reduce those impacts. The world's climate is changing more rapidly than scientists had envisioned just a few years ago, and the potential impact of climate change on world food production is quite alarming. Nowhere is the sense of alarm more keenly felt than among those who study the warming of the world's oceans. Evidence of the dire effects of climate change on fisheries and fish farming has now mounted to such an extent that the need for a book such as this has become urgent. A landmark publication devoted exclusively to how climate change is affecting and is likely to affect commercially vital fisheries and aquaculture operations globally, Climate Change Impacts on Fisheries and Aquaculture provides scientists and fishery managers with a summary of and reference point for information on the subject which has been gathered thus far. Covers an array of critical topics and assesses reviews of climate change impacts on fisheries and aquaculture from many countries, including Japan, Mexico, South Africa, Australia, Chile, US, UK, New Zealand, Pacific Islands, India and others Features chapters on the effects of climate change on pelagic species, cod, lobsters, plankton, macroalgae, seagrasses and coral reefs Reviews the spread of diseases, economic and social impacts, marine aquaculture and adaptation in aquaculture under climate change Includes special reports on the Antarctic Ocean, the Caribbean Sea, the Arctic Ocean and the Mediterranean Sea Extensive references throughout the book make this volume both a comprehensive text for general study and a reference/guide to further research for fisheries scientists, fisheries managers, aquaculture personnel, climate change specialists, aquatic invertebrate and vertebrate biologists, physiologists, marine biologists, economists, environmentalist biologists and planners.

The Neanderthals populated western Europe from nearly 250,000 to 30,000 years ago when they disappeared from the archaeological record. In turn, populations of anatomically modern humans, Homo sapiens, came to dominate the area. Seeking to understand the nature of this replacement, which has become a hotly debated issue, Paul Mellars brings together an unprecedented amount of information on the behavior of Neanderthals. His comprehensive overview ranges from the evidence of tool manufacture and related patterns of lithic technology, through the issues of subsistence and settlement patterns, to the more controversial evidence for social organization, cognition, and intelligence. Mellars argues that previous attempts to characterize Neanderthal behavior as either "modern" or "ape-like" are both overstatements. We can better comprehend the replacement of Neanderthals, he maintains, by concentrating on the social and demographic structure of Neanderthal populations and on their specific adaptations to the harsh ecological conditions of the last glaciation. Mellars's approach to these issues is grounded firmly in his archaeological evidence. He illustrates the implications of these findings by drawing from the methods of comparative socioecology, primate studies, and Pleistocene paleoecology. The book provides a detailed review of the climatic and environmental background to Neanderthal occupation in Europe, and of the currently topical issues of the behavioral and biological transition from Neanderthal to fully "modern" populations.

Another season begins in the seaside resort town of Winslow, Rhode Island, and Rosa Capoletti's life takes an unexpected turn when her childhood sweetheart arrives back in town. Now Rosa learns that in love, as in life, there are second chances.

Book Two of the Phoenix Realm One spring night under the scimitar moon, Princess Kelene of Numer and her mother frolic as mermaids in the ocean waves, unaware until it's too late that her youngest brother has followed them--and drowned. When this tragedy plunges her mother into grief-stricken shock, Kelene sets out to find Dominic of Landers, the only healer in the known world who can perhaps help. Her voyage west leads her to confront the ghost of her father, a ruthless pirate--and the vagaries of her own heart.

Meanwhile, across the sea in Cormalen, trouble brews in a cauldron of court intrigue, scandal, and royal secrets. A most unsuitable suitor pursues Dominic's sister: the immortal bird-girl Avreal, known for her stage dancing, her hot temper, her outrageous lack of convention--and the fiery, sometimes lethal power of her phoenix voice. But when past sins threaten the quietly budding romance between Princess Venessa and Wylan of Landers, not even Avreal's song can quell the unrest. The repercussions could level the throne and all the Landers and King Segar have built over the last quarter century.

Since its discovery Antarctica has held a deep fascination for biologists. Extreme environmental conditions, seasonality and isolation have lead to some of the most striking examples of natural selection and adaptation on Earth. Paradoxically, some of these adaptations may pose constraints on the ability of the Antarctic biota to respond to climate change. Parts of Antarctica are showing some of the largest changes in temperature and other environmental conditions in the world. In this volume, published in association with the Royal Society, leading polar scientists present a synthesis of the latest research on the biological systems in Antarctica, covering organisms from microbes to vertebrate higher predators. This book comes at a time when new technologies and approaches allow the implications of climate change and other direct human impacts on Antarctica to be viewed at a range of scales; across entire regions, whole ecosystems and down to the level of species and variation within their genomes. Chapters address both Antarctic terrestrial and marine ecosystems, and the scientific and management challenges of the future are explored.

For the sake of her children, a young mother endures a violent marriage - but there is hope of better things to come... Lyn Andrews writes a moving saga in Across a Summer Sea, a tale of a mother's devotion and taking chances. Perfect for fans of Katie Flynn and Cathy Sharp. Mary McGann's marriage has always been difficult, thanks to her husband Frank's drunken, jealous nature. Only because the little money he earns in the docks keeps food in the mouths of their children is Mary prepared to put up with him. When Frank throws them all out on the street, Mary flees to her family in Dublin. There she meets Richard O'Neill, a handsome though solitary man. Despite the attraction between them, Mary's not looking for love, and when she hears that Frank needs her, she returns to Liverpool, foreseeing a future of yet more hardship. But there are surprises in store. Though tragedy and danger are looming, a brighter horizon lies beyond - if Mary's prepared to be strong and take the chances that come her way... What readers are saying about Across a Summer Sea: '[Lyn Andrews] is most definitely my favourite author - I have never read anything which has been less than brilliant' 'What a truly enlightening story from heartbreak to untold hardships to finally find true love - beautiful' 'Five stars' Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

The Oxford Book of Modern Science Writing

Selected and introduced by Richard Dawkins, The Oxford Book of Modern Science Writing is a celebration of the finest writing by scientists for a wider audience - revealing that many of the best scientists have displayed as much imagination and skill with the pen as they have in the laboratory. This is a rich and vibrant collection that captures the poetry and excitement of communicating scientific understanding and scientific effort from 1900 to the present day. Professor Dawkins has included writing from a diverse range of scientists, some of whom need no introduction, and some of whose works have become modern classics, while others may be less familiar - but all convey the passion of great scientists writing about their science.

As a shop girl in a big department store in 1930s Liverpool, Cathie enjoys every day with her many friends and customers. Love beckons too - but have her sweet face and warm personality attracted a cad? Heart and Home is a poignant saga of shop girls in 1930s Liverpool from bestselling author, Lyn Andrews. Perfect for fans of Dilly Court and Kate Thompson. Cathie Kinrade is all too used to hardship. Growing up on the Isle of Man in the 1930s, she sees her da set sail daily on dangerous seas while her mam struggles to put food on the table. Cathie has little hope for her own future, until a chance encounter changes her fortunes for ever. Fiercely determined, Cathie leaves for Liverpool, a bustling modern city full of possibility. With a lively job as a shop girl in a grand department store, and a firm friend in kind-hearted Julia, Cathie has found her niche. But the discovery of an explosive secret could put everything at risk. And when love comes calling, Cathie's new friends fear that she may be set to trust the wrong man with her heart... What readers are saying about Heart and Home: 'Heart and Home is an excellent read for when you want to sit back and relax... a touch of light, romantic, family and friend based escapism' 'Lyn Andrews always writes such vivid stories of Liverpool in the 1930s and the strong female characters that populate the streets of that lovely city... A great, heart-warming story' 'Great read! Loved the storyline and characters - read in one night as I couldn't put this down'
