Matter: Physical Science for Kids from the Picture Book Science series gets kids excited about science!

What's the matter?

Everything is matter!

Everything you can touch and hold is made up of matter—including you, your dog, and this book! Matter is stuff that you can weigh and that takes up space, which means pretty much everything in the world is made of matter. In Matter: Physical Science for Kids, kids ages 5 to 8 explore the definition of matter and the different states of matter, plus the stuff in our world

that isn't matter, such as sound and light! In this nonfiction picture book, children are introduced to physical science through detailed illustrations paired with a compelling narrative that uses fun language to convey familiar examples of real-world science connections. By recognizing the basic physics concept of matter and identifying the different ways matter appears in real life, kids develop a fundamental understanding of physical science and are impressed with the idea that science is a constant part of our lives and not limited to

animal kingdom began as a matter of survival – differentiating the edible from the toxic, the ferocious from the tractable. Since then, our compulsion to catalogue wildlife has played a key role in growing our understanding of the planet and ourselves, inspiring religious beliefs and evolving scientific theories. The book unveils wild truths and even wilder myths about animals, as perpetuated by zoologists – revealing how much more there is to learn, and unlearn. Animals were among the first subjects ever drawn by humans. Long before Darwin or Watson and Crick, our ancestors studied the visual similarities and differences

between the creatures which inhabit the Earth alongside us. Early savants could sense there was an order, a scheme, which unified all life. The schemes they formulated often tell us as much about ourselves as they do about the animals depicted, highlighting obsessions, fears, revelations and hopes. The human quest to classify living beings has left us with a rich artistic legacy in four great stages—the folklore and religiosity of the ancient and Medieval world; the naturalistic cataloging of the Enlightenment; the evolutionary trees and maps of the nineteenth century; and the modern, computer-hued classificatory labyrinth. The aim of

this book is to tell the story of our systematization of the beasts.

These charts of the zoological world parallel prevailing artistic trends and scientific discoveries, woven together with philosophical threads that run throughout: animal life as parable, a tree, a maze, a terra incognita, a mirror upon ourselves.
