

Bipolar Disorder Or Drugs (True Stories Of Life In A Psychiatric Hospital Book 5)

The book provides treatment recommendations for bipolar patients, a review of evidence about bipolar disorder, and states research needs. A powerful, heartbreaking, and redemptive account of a boy who endured a childhood of poverty and abuse in an American Southwest trailer park named Cloud 9. Abandoned by his father at age two, Rick Sylvester lived with an abusive mother whose struggles as a member of the working poor led her to drugs, alcohol, and eventually attempted suicide. Rick battled depression, anxiety, and PTSD as the chaos, neglect, and unpredictability of his childhood seemed to doom him to follow in his mother's footsteps. Well into adulthood, Rick stumbled through unemployment and divorce, using drugs and alcohol to numb the pain until he was diagnosed with bipolar disorder. Miraculously, though, he overcame the odds and today is a happy husband and father. How did this happen? Rick's answer is this: "It was the Lord." A message of hope to those who are drowning from an undeserved childhood, Leaving Cloud 9 speaks to millions who grew up poor, feeling ignored and hopeless, and who need the healing power of God. This indelibly American story conveys the steadfast love of Jesus and his power to deliver us from the most devastating of pasts.

Every year, one in four American adults suffers from a diagnosable mental health disorder. In these true stories, writers and their loved ones struggle as their worlds are upended. What do you do when your father kills himself, or your mother is committed to a psych ward, or your daughter starts hearing voices telling her to harm herself—or when you yourself hear such voices? Addressing bipolar disorder, OCD, trichillomania, self-harm, PTSD, and other diagnoses, these stories vividly depict the difficulties and sorrows—and sometimes, too, the unexpected and surprising rewards—of living with mental illness.

My title, The Inner Truth, expresses the significance of my core existence that allowed me to find myself again out of the filth that surrounded me. Others treated me as an object to be used and tossed on the trash heap, but I have held onto the beauty that exists in me to pull myself from the darkness that has been my life to be able to tell my story to benefit others.

Inspired Recovery The Sun and the Moon: Poetry Back from the Brink

The Evidence for Stigma Change

On July 24th, 2004, author Graeme Cowan took pen to paper and said goodbye to his family. "It just can't be a burden any longer," he wrote. After four failed suicide attempts, and a five-year episode of depression that his psychiatrist described as the worst he had ever treated, Cowan set out on a difficult journey back from the brink. Since then, he has dedicated his life to helping others struggling with depression and bipolar disorder—and that is how this book came to be. If you have severe depression or bipolar disorder, it is important to remember that you are not alone. Featuring interviews with people from all walks of life, Back from the Brink is filled with real stories of hope and healing, information about treatment options and medication, and tools for putting what you've learned into practice. If you are ready to put one foot in front of the other and finally set out on the path to recovery, the powerful stories in this book will inform and inspire you to make lasting change. If you have severe depression or bipolar disorder, you may find it difficult to take that first step toward recovery. You aren't alone. In our society, many people with depression or bipolar disorder do not seek therapy or medical treatment due to the stigma that surrounds mental illness. Even people in "progressive" communities may not want to admit that they are on antidepressants or mood-balancing medications. Isn't it time we changed the way we thought about these illnesses? The book includes a special foreword by actress Glenn Close, and features in-depth interviews with former US Representative Patrick Kennedy; television talk-show host Trisha Goddard; director of public policy at Google, Bob Boorstin; former chief advisor to Tony Blair, Alastair Campbell; former tennis pro, Cliff Richey; former professional football player, Greg Montgomey; and many more.

A revised and updated edition of a collection of personal essays that illuminate what life is like for those who live with mental illness, and how it impacts their family members. More than 4 million Canadians and 57 million Americans suffer from a diagnosable mental illness, and yet there are still considerable stigmas and a great deal of misunderstanding surrounding even the most common diagnoses—schizophrenia, bipolar disorder, autism, obsessive-compulsive disorder, clinical depression, post-traumatic stress disorder, and dissociative identity disorder. Rather than analyze the diagnoses and symptoms, these first-hand accounts focus on the very essence of a psycho-emotional breakdown, and respond to the mental, physical, and emotional turmoil it inevitably causes. What does a mother do when her teenage son's personality suddenly fractures? How does a police officer cope when his employer refuses to provide adequate care until he can prove his PTSD is work-related? How do children grow up under the care of a manic father whose illness lands him in and out of medical and social incarceration? Raw, honest, and painful, these essays communicate disappointment and despair, but also courage and compassion. They offer a lifeline for sufferers and support for their friends and family, and promote new and improved attitudes toward those with mental illness. With a foreword by respected physician, bestselling author, and renowned speaker Dr. Gabor Maté, Hidden Lives gives readers a place to turn, and provides a platform to share their struggle.

My story is of a young girl who loses both her birth and adoptive parents. Later, she is sent to live in an abusive home. As a result of her tragedies she develops a variety of mental health issues and makes self-destructive choices. Eventually she evolves into a 31 year old college graduate with a degree in Psychology. It's the kind of story one expects to be fiction, but it is her life. She now lives in Austin TX with her seven-year-old daughter. Looking at her you would not know her birth mother tried to kill herself 27 times while she was pregnant with Rayna and she was born mentally disabled to heroin. Her memoir titled Porcelain: a true story of triumph is a heart gripping documentary of her journey from feeling broken to brave survivor.

Get an accurate diagnosis and get on with enjoying and living your life! Bipolar Disorder affects many more people than just the millions who suffer from the disease. Like depression and other serious illnesses, bipolar disorder also affects spouses, partners, family members, friends, and coworkers. Bipolar Disorder For Dummies explains the brain chemistry behind the disease and covers the latest medications and therapies. You'll get reassuring, sound advice and self-help techniques that you and your loved ones, including kids and teens, can use to ease and eliminate symptoms, function in times of crisis, plan ahead for manic or depressive episodes, and feel a whole lot better. Covers new diagnosis methods developed by the American Psychiatric Association Increased coverage of genetics, biochemistry, and imaging studies relevant to bipolar disorder Advice on supporting a loved one (who may not want help) Updated and expanded medication guide and treatment options, including Deep Brain Stimulation Complete with fill-in-the-blank forms and charts, key online resources, and first-hand accounts from real people, Bipolar Disorder For Dummies gives you the latest information and self-help strategies you and your loved ones need to conquer this disease and get on with your lives.

True Stories of Medical Deception

Too Good for This World

THE INNER TRUTH

Bipolar: The Elements of Bipolar Disorder

True Stories of Hope and Recovery from Mental Illness

The Girl With The Universe In Her Eyes The Bipolar Addict: Drinks, Drugs, Delirium & Why Sober Is the New Cool delivers an insider's look into the invisible world of those living with a co-occurring disorder of manic depression and addiction. These true tales of survival, including the author's own, offer insight into a secret tribe of mentally ill heroes, the promise of sobriety and the triumph of stability. Real Hope, True Freedom covers a wide variety of topics on sex addiction and the process of recovery. It addresses the different manifestations of sex addiction, how sex addiction impacts the brain, sex addiction risk factors, when sex addiction co-occurs with other mental health disorders, barriers to getting help/treatment, information and resources specific to the needs of the partners of sex addicts, the process of treatment, the process of recovery for both individuals and couples, relationship rebuilding, re-establishing intimacy, healthy sexuality, and relapse prevention tools and strategies. Milton Magness, D. Min., MA, LPC, CSAT, is the founder and director of Hope & Freedom Counseling Services. A Licensed Professional Counselor and Certified Sex Addiction Therapist, he served five terms as the president of the Society for the Advancement of Sexual Health (SASH), the international professional organization for sexual addiction therapists. Prior to becoming a therapist he was a pastor for twenty years. He has a Doctor of Ministry from Luther Rice Seminary, a Master of Arts in Psychology from Houston Baptist University, and Master of Arts in Religious Studies from Southwestern Seminary. Dr. Magness is the author of Stop Sex Addiction: Real Hope, True Freedom for Sex Addicts and Partners, and Thirty Days to Hope & Freedom for Sexual Addicts: the Essential Guide for Daily Recovery and Relapse Prevention. Marsha Means, MA, a trained Marriage and Family Therapist, as well as the founder and director of A Circle of Joy Ministries, an organization designed to help women impacted by sexual addiction and address the needs created by this growing problem. In 2000, she gained international recognition through Prodigals International, an organization she and her husband founded in the Seattle area to train and equip therapists, churches, and lay people in providing help, hope, and healing to those touched by the pain and shame of sex addiction. Ms. Means is the author of Living With Your Husband's Secret Wars, and the co-author of Your Sexually Addicted Spouse: How Partners Can Cope and Heal.

An easy to read little book on Bipolar Disorder, Written in plain English for people with Bipolar Disorder, family members, and therapists. Feedback is that it is a very illuminating book and people have said (Bipolars and therapists) "I finally understand Bipolar Disorder."

In any given year, one in four Americans suffers from a diagnosable mental illness—and yet there is still a significant stigma attached to being labeled as "mentally ill." We hear about worst-case scenarios, but in many—maybe even most—cases, there is much room for hope. These frank, often intimate stories reflect the writers' struggles to overcome—both as professionals and as individuals, as current therapists and as former patients—the challenges presented by depression, bipolar disorder, OCD, and other mental disorders. These dramatic narratives communicate clearly the rewards of helping patients move forward with their lives, often through a combination of medication, talk therapy, and common sense. Collectively, these true stories highlight the need for empathy and compassion between therapist and patient, and argue for a system that encourages human connection rather than diagnosis by checklist.

Real Facts for Real Lives

Borderline

A Four Generation Bipolar Odyssey

How I Healed Bipolar Disorder Without Drugs

How to Heal the Brain Without Psycho Meds

True Stories and Practical Help for Overcoming Depression and Bipolar Disorder

In this anthology of life narratives, we share our unique stories about becoming homeless, the things we experienced while we were homeless, and our hopes and dreams for the future. All of us have experienced some form of extreme trauma such as serious physical or sexual assault, witnessing severe injury or death, being involved in a life-threatening accident, or having combat experience in a war zone. Many of us have turned to alcohol and drugs to help blunt the effects of these experiences. It is our hope that the real story will help people come to understand and appreciate that being homeless is a condition, not a choice.

True story of the author's personal healing of her Bipolar Disorder without the use of drugs. Life can be challenging - I was a carpenter on the way to work as a commercial pilot when a car accident destroyed my plans and my health in summer 1999. This accident left me with a Post-Traumatic Stress Disorder (PTSD) for many years until I got the chance to get my life back when I found a way to heal my trauma. Still, something didn't feel right and a couple of weeksbefore Valentine's Day 2016, I learned that I have a disorder. A brain disorder, the bipolar disorder. It's a genetic vulnerability that can get activated by the events of life. The moment I realized almost all my problems were symptoms of a disorder, I felt such a relief. So many things were clear in retrospect. Not really knowing anything about bipolar disorder started to research on internet. Most information is about how to get medicated and how to live with the side effects of the drugs. For personal reasons I don't plan on takingpsychotropic drugs, if there might be a natural way to heal. Please consult your doctor before you change your medication.

After days of search, I found a blog, someone writing about how he has healed his bipolar disorder, living now stable for years. To my surprise he wasn't selling any kind of drug or food supplement. No, he said he basically only did one thing, he stopped to eat sugar and to drink coffee, and alcohol, as it is sugar too. Further research proved the connection of sugar, insulin and the brain. The moment I realized, the impact of sugar on my brain, I made a decision: "I want to drop the sugar, for the health of the brain. - "Now I know: It's worth it!" Changing my diet has changed my life, I feel progressively and constantly better and much more stable then I felt for a long time. Feeling better on mental, emotional and physical levels gave me a huge relief in many ways. Not only had my mind quieted down and the brain fog almost disappeared, I usually sleep now all night, waking up with recharged batteries. How wonderful to leave insomnia behind. A good sleep is worth so much while not enough sleep can be the life of a life. Are you surprised by this way to heal the brain? I amstill, and I hope reading this book inspires you. HOW TO HEAL THE BRAIN WITHOUT PSYCHOTROPIC MEDICATION, a book about my life and how it is possible to live happy with Bipolar 2 and Post-Traumatic Stress Disorder. Do you just look for a solution to your problem of constant fatigue and headache? - Feel free to jump to the chapter "SUGAR - THE DRUG THAT NEARLY KILLED ME." "BIPOLAR BEARS" puts sugar into context with bipolar disorder and other brain disorders.

Inspired Recovery is a compilation of true stories from people who have achieved their life goals while managing bipolar disorder, schizophrenia, schizoaffective disorder or depression. Julie Edwards has suffered from mental illness her entire life. The eldest of four children born into a destitute family in outback Australia in 1948, Julie was diagnosed with 'manic depression' at age eighteen. Her experiences include severe symptoms of depression, mania and psychosis; numerous treatments including medication and electroconvulsive therapy; violent physical and emotional abuse through dysfunctional relationships; bereavement and loss, including the tragic death of two husbands; substance abuse; serious physical health issues; attempted suicide; complete breakdown and the development of additional psychiatric disorders. Medical treatment and pharmacology play a major role in the recovery process - but so does the human spirit. Now aged sixty, Edwards describes her life as 'filled with joy!' Though a sufferer of schizoaffective disorder is not yet known, she has developed a successful strategy to achieve recovery and live a rich, full life. It is her story that has inspired her daughter, Sonya Melbourne, to gather and share these beautiful, true accounts as a message of hope for those who suffer from serious mental illnesses, and those who care about them.

An Information Guide

Real-Life Questions with Up-to-Date Answers

The most practical and current resource for children and teens affected by bipolar disorder. A practicing psychiatrist specializing in bipolar disorder for nearly twenty years, Dr. Burgess has helped countless children and teens navigate the minefield of mania and depression and lead successful, happy lives. Drawing on the real questions asked by patients and parents and families of affected children, The Bipolar Handbook for Children, Teens, and Families tackles every area of the disorder: causes; medical treatment and psychotherapy; strategies for creating a healthy lifestyle; and preventing, coping with, and treating bipolar episodes. More than five hundred questions and answers address : how to choose the right doctor or specialist for your child; what treatment and medication protocols are best; and - how to reduce stress to prevent manic and depressive episodes. Special chapters on practical strategies for academic success, building healthy relationships, issues that specifically affect teens versus smaller children, and coping techniques for families and friends further explore the impact of the disorder on daily life. The Bipolar Handbook for Children, Teens, and Families also includes diagnostic criteria from the American Psychiatric Association and the National Institute of Mental Health, making this a versatile guide?perfect for both quick reference and in-depth study.

The book will take you through a psycho-spiritual journey in hope of finding your :SOUL" and be able to live peaceably and harmonically with your "True Self" The book is exciting because you can find a map to trace you back to your origin, find out where you detour. Exercise are available for you to explore and fix the past. The outcome is worthy of the journey. If you buy just one book on bipolar disorder, let this be it. There's an old saying: "Prevention is better than cure." If you have bipolar disorder, this is especially true. For you, it's incredibly important to read the warning signs of a possible episode. For instance, you may find you are not sleeping as well as usual, or you might be sleeping too much. You may stop doing things that you normally enjoy, or you may start acting out your impulses in ways that alienate those around you or get you into trouble. While the path to wellness for those with bipolar may involve psychiatric visits and medication adjustments, preventing manic and depressive episodes is the true key to staying healthy and happy. So how do you do it? And most importantly, how can you keep yourself motivated? In this powerful, breakthrough book, bipolar expert Ruth C. White shares her own personal approach to relapse prevention using the innovative program SNAP (Sleep, Nutrition, Activity, and People). White also offers practical tips and tracking tools you can use anytime, anywhere. By making necessary lifestyle adjustments, you can maintain balanced moods, recognize the warning signs of an oncoming episode, and make the necessary changes to reduce or prevent it. This is the first and only book on bipolar disorder that focuses exclusively on prevention. To help you stay well, White includes links to helpful online tracking tools so that you can manage your symptoms, anytime, anywhere. If you are ready to stop living in fear of your next episode, this life-changing book can help you take charge of your diagnosis—and your life.

If we choose to trust unconditionally, how many lives could we change? When Pastor Bruce Deel took over the Mission Church in the 30314 zip code of Atlanta, he had orders to shut it down. The church was old and decrepit, and its neighborhood—known as "Better Leave, You Effing Fool," or "the Bluff," for short—had the highest rates of crime, homelessness, and incarceration in Georgia. Expecting his time there to only last six months, Deel was not prepared for what happened next. One Sunday, he was approached by a woman he didn't know. "I've been hooking and stripping for fourteen years," she said. "Can you help me?" Soon after, Bruce founded an organization called City of Refuge rooted in the principle of radical trust. Other nonprofits might drug test before offering housing, lock up vehicles, or veto a program giving job skills and character references to felons as "a liability." But Bruce believed the best way to improve outcomes for the marginalized and impoverished was to extend them trust, even if that trust was violated multiple times—and even if someone didn't yet trust themselves. Since then, City of Refuge has helped over 20,000 people in Atlanta's toughest neighborhoods escape the cycles of homelessness, joblessness, and drug abuse. Of course, trust alone can't overcome a broken system that perpetuates inequality. Presenting an unvarnished window into the lives of ex-cons, drug addicts, human trafficking survivors, and displaced souls who have come through City of Refuge, Trust First examines the context in which Bruce's Atlanta neighborhood went downhill—and what City of Refuge chose to do about it. They've become a one-stop-shop for transitional housing, on-site medical and mental health care, childcare, and vocational training, including accredited intensives in auto tech, culinary arts, and coding. While most social services focus on one pain point and leave the burden on the poor to find the crossroad but that's serve their other needs, Bruce argues that bringing someone out of homelessness requires treating all of their needs simultaneously. This model has proven so effective that a dozen new chapters of City of Refuge have opened in the US, including in California, Illinois, Ohio, Maryland, Virginia, Texas, and Georgia. More than a narrative, this is a manual and radical primer for behavioral change belongs on every leader's shelf. Heartfelt, deeply personal, and inspiring, Trust First will break down your assumptions about whether anyone is ever truly a lost cause. Bruce will donate a portion of his proceeds from Trust First to the charitable organization City of Refuge.

Abused, Overused and Meaningless True stories of Mental Illness of Abusers & the Traumatized, and the Relationship between those Disorders and Opiate Abuse. Accidental Overdose and Suicide By: Kathleen Kush and Chery Jimenez In Abused, Overused and Meaningless, Kathleen Kush and Chery Jimenez tell true stories taken from their lives and drawn from surveys and interviews with others concerning depression and suicide caused by mental or physical abuse. Some information has been gathered from various news publications, social media posts or other online sources and television media regarding historical and biographical stories. The authors also draw from their personal experiences. Both authors have attempted suicide at least once in their lives. They feel that there are many people who are depressed and afraid to relate their stories because of embarrassment or fear of repercussions. Instead, these people suffer in silence from issues such as depression, PTSD and DID. The authors hope that this book will let those who are suffering know that they are not alone. Their fear can be overcome with nurturing and therapy.

Pediatric bipolar disorder (I and II) patients suffer from recurrent episodes of depression and mania or hypomania (American Psychiatric Association, 1994), or mixed episodes with rapid cycling (Findling et al., 2001; Geller et al., 2002). Worldwide prevalence of bipolar disorder was 5% (Tondo et al., 2003), and in the USA was 2.6% in adults and 0-3% in adolescents (Bipolar Disorder). Early-onset bipolar disorder in childhood was associated with a higher number of lifetime episodes of manic and depressive phases, more comorbidities such as anxiety and substance abuse, rapid cycling between different phases, and higher incidence of suicide attempts compared to adulthood onset of bipolar disorder (Potter et al., 2009; Leverich et al., 2007; Perlis et al., 2004). Lifetime prevalence of the depressive phase among bipolar disorder patients is 3-fold higher than the mania phase (Post et al., 2003). Untreated bipolar depression among all the phases of bipolar disorder, particularly in children and adolescents, is associated with a high risk of suicidality (Tondo et al., 1998), substance abuse, functional disability, and poor academic and social performance among children and adolescents (Baldessarini et al., 2008; Angst et al., 2007; Frye et al., 2006; Thase, 2006; Datta et al., 2007; Huxley and Baldessarini, 2007; Tondo and Baldessarini, 2007). Despite a higher prevalence of the depressive phase and associated risk of morbidity and mortality among bipolar disorder patients, research on the bipolar depressive phase is limited (Bhangoo et al., 2003). Although medication regimens includingmood stabilizers, antidepressants, and antipsychotics for treating bipolar depression in adults is well established (Lin et al., 2006), similar treatment guidelines for bipolar depression in younger populations are unavailable. Efficacy of different classes of medications in treating pediatric bipolar depression has been examined in 6 randomized, controlled, placebo-controlled studies, with antidepressants, mood stabilizers, and second-generation antipsychotics (SGA) are considered to be the 1st line therapy for pediatric bipolar depression, while antidepressants selective serotonin reuptake inhibitors (SSRI) and bupropion are recommended only as adjunct therapy when 1st line treatment is ineffective (Kowatch et al., 2005). However, the utilization pattern of medications in treating bipolar depression in pediatric population is mostly unexplored. Subsequently, real-world safety and effectiveness of psychotropic medications in pediatric bipolar depression is also limited. Controversy prevails over the safety of using antidepressants in bipolar depression patients due to the concerns about possible manic or hypomanic switching, rapid cycling, and long-term mood destabilization. Although a potential risk of mood destabilization with the use of antidepressants has been suggested historically, critical evaluation of those clinical trials suggested presence of bias and a lack of control groups to accurately address the issue. Quantitative real-world data on comparative safety of antidepressants, antipsychotics, and mood stabilizers, in terms of risk of short-term manic switch among pediatric bipolar depression patients, is limited as well. Effectiveness of psychotropic pharmacotherapy in bipolar disorders is examined for outcomes such as response, remission, recovery, and relapse of the depressive phase. Such outcomes are measured using mania and depression rating scales, such as Young's mania rating scale, Montgomery-Åsberg depression rating scale, etc. Unavailability of such severity scales in administrative data hinders direct assessment of comparative effectiveness of psychotropic medications in real-world patients. Overall, numerical data on comparative effectiveness of antidepressants, antipsychotics, and mood stabilizers in pediatric bipolar depression is limited. Considering the prevalence of bipolar depression among children and adolescents and the associated risk of morbidity and mortality, and paucity of knowledge regarding drug utilization pattern, and comparative safety and effectiveness of antidepressant pharmacotherapy in this patient population, the specific aims of this study will be: Aim I: To assess adherence to psycho-pharmacotherapeutic regimens during 6 months after the initial bipolar depression diagnosis among Medicaid-enrolled children and adolescents, in terms of: (1) Continuation of antidepressant monotherapy, antipsychotic monotherapy, mood stabilizer monotherapy, antidepressant polytherapy (with antipsychotic or mood stabilizer), antidepressant polytherapy (with mood stabilizer), and augmentation pattern with a new class of medications among antidepressant, antipsychotic, and mood stabilizer monotherapy; and antidepressant, and antipsychotic-mood stabilizer polytherapy. (2) Augmentation pattern with a new class of medications among antidepressant, antipsychotic, and mood stabilizer monotherapy; and antidepressant, and antipsychotic-mood stabilizer polytherapy. (3) Switch from initial treatment regimen including antidepressant, antipsychotic, and mood stabilizer monotherapy; and antidepressant, antipsychotic-mood stabilizer, and 3-class polytherapy to regimens including other therapeutic classes, during the 6 months of follow up after initial bipolar depression diagnosis. (4) All medication class discontinuation patterns in antidepressant, antipsychotic, and mood stabilizer monotherapy; and antidepressant, antipsychotic-mood stabilizer, and 3-class polytherapy regimens, during the 6 months of follow up after initial bipolar depression diagnosis. Aim II: To examine the risk of manic switch with the use of antidepressant in Medicaid-enrolled pediatric bipolar depression patients. (1) To assess comparative safety of antidepressant monotherapy against antipsychotic monotherapy, in terms of risk of manic switch in pediatric bipolar depression population. (2) To assess comparative safety of antidepressant monotherapy against mood stabilizer monotherapy, in terms of risk of manic switch in pediatric bipolar depression population. Aim III: To evaluate the effectiveness of antidepressant pharmacotherapy among Medicaid-enrolled children and adolescents with bipolar depression. (1) To assess risk of treatment augmentation in pediatric bipolar depression patients, comparing (i) Antidepressant monotherapy vs. antipsychotic monotherapy, (ii) Antidepressant monotherapy vs. mood stabilizer monotherapy, (iii) Antidepressant polytherapy vs. antipsychotic-mood stabilizer polytherapy. (2) To assess risk of mental-health related hospitalization in pediatric bipolar depression patients, comparing (i) Antidepressant monotherapy vs. antipsychotic monotherapy, (ii) Antidepressant monotherapy vs. mood stabilizer monotherapy, (iii) Antidepressant polytherapy vs. antipsychotic-mood stabilizer polytherapy.

(iii) Antidepressant polytherapy vs. antipsychotic-mood stabilizer polytherapy.

"Providing information about depression in bipolar disorder, including treatment, diagnosis, history, medical advances, and true stories about people with the disease".—Provided by publisher.

In the vein of An Unquiet Mind comes a storm of a memoir that will take you deep inside bipolar disorder and change everything you know. When Marya Hornbacher published her first book, Wasted: A Memoir of Anorexia and Bulimia, she did not yet have the piece of shattering knowledge that would finally make sense of the chaos of her life. At age twenty-four, Hornbacher was diagnosed with Type I rapid-cycle bipolar, the most severe form of bipolar disorder. In Madness, in her trademark dry and utterly self-revealing voice, Hornbacher tells her new story. Through scenes of astonishing visceral and emotional power, she takes us inside her own desperate attempts to counteract violently careening mood swings by self-starvation, substance abuse, numbing sex, and self-mutilation. How Hornbacher fights her way up from a madness that all but destroys her, and what it is like to live in a difficult and sometimes beautiful life and marriage—where bipolar always beckons—is at the center of this brave and heart-stopping memoir. Madness delivers the revelation that Hornbacher is not alone: millions of people in America today are struggling with a variety of disorders that may disguise their bipolar disease. And Hornbacher's fiercely self-aware portrait of her own bipolar as early as age four will powerfully change, too, the current debate on whether bipolar in children actually exists. New York Times"Humorous, articulate, and self-aware...A story that is almost impossible to put down."—"With the same intimately revelatory and shocking emotional power that marked [Wasted], Hornbacher guides us through her labyrinth of psychological demons."—Elle

The Bipolar Handbook for Children, Teens, and Families

Drinks, Drugs, Delirium & Why Sober Is the New Cool

People who have extreme mood swings may have bipolar disorder, or manic-depressive illness. Their moods may have nothing to do with things going on in their lives. The symptoms of bipolar disorder affect not only mood, but also how people think, behave and function. This guide discusses what bipolar disorder is the symptoms, patterns and causes the treatment options what to expect during recovery from an episode of mania or depression how partners and family members can be supportive and helpful. This guide will help people with bipolar disorder, along with their families and friends, to navigate through the highs and lows toward recovery."

This manual attempts to provide simple, adequate and evidence-based information to health care professionals in primary health care especially in low- and middle-income countries to be able to provide pharmacological treatment to persons with mental disorders. The manual contains basic principles of prescribing followed by chapters on medicines used in psychotic disorders; depressive disorders; bipolar disorders; generalized anxiety and sleep disorders; obsessive compulsive disorders and panic attacks; and alcohol and opioid dependence. The annexes provide information on evidence retrieval, assessment and synthesis and the peer view process.

Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.

Most of us can recall a time when we pretended to be sick to reap the benefits that go along with illness. By playing sick, we gained sympathy, care, and attention, and were excused from our responsibilities. Though doing so on occasion is considered normal, there are those who carry their deceptions to the extreme. In this book, Dr. Marc Feldman describes people's strange motivations to fabricate or induce illness or injury to satisfy deep emotional needs. Doctors, family members, and friends are lured into a costly, frustrating, and potentially deadly web of deceit. From the mother who shaves her child's head and tells her community he has cancer, to the co-worker who suffers from a string of incomprehensible "tragedies," to the false epilepsy victim who monopolizes her online support group, "disease forgery" is ever-present in the media and in many people's lives. In Being to Be Ill: True Stories of Medical Deception, Dr. Feldman, with the assistance of Gregory Yates, has chronicled this fascinating world as well as the paths to healing. With insight developed from 25 years of hands-on experience, Dying to be Ill is sure to stand as a classic in the field.

Bipolar Disorder

SIENNA IN SEARCH OF HER 'TRUE SELF'

The True Story of a Life Resurrected from the Ashes of Poverty, Trauma, and Mental Illness

Some children inherit "the family noise." Autumn Stringam and her brother Joseph inherited the family bipolar disorder, a severe mental illness that led to their mother's and grandfather's suicides. Autumn, at 22, was psychotic and in a psychiatric hospital on suicide watch; Joseph, at 15, was prone to violent episodes so terrifying the family feared for their lives. But after they began taking a nutritional supplement developed by their father and based, incredibly, on a formula given to aggressive dogs—Autumn's and Joseph's symptoms disappeared. Today they both lead normal, productive lives. A Promise of Hope is the personal story of Autumn Stringam's flight from madness to wellness, all due to the vitamin and mineral supplement that works on the premise that some forms of mental illness are caused by nutritional deficiencies. An honest book that exposes the hidden torment of bipolar disorder, it is the story of a daughter seeking to forgive her mother. A Promise of Hope is also an astonishing scientific account that moves from a kitchen table in Alberta to the treatment offices of a distinguished Harvard psychiatrist and into the labs of a skeptical medical establishment. It climaxes in a bitter—but eventually triumphant—battle with Health Canada, in which the tiny supplement company is exonerated and praised for saving the lives of thousands of Canadians previously thought lost to mental illness. More than anything, A Promise of Hope is a powerful story and a call for a new understanding of the causes of mental illness and its treatments. 20% of Canadians will experience mental illness in their lifetimes. Over 300,000 Canadians are affected by bipolar disorder (or manic depression) 15% of people with bipolar disorder commit suicide EMPower Plus, the supplement that worked for Autumn, is being used and studied around the world, reflecting the growing awareness of the role of micronutrients in normal brain function.

A collection of poems written by Maria O'Hare, which were written during some of her most traumatic life experiences, and during periods of severe mental illness, particularly bipolar disorder. Between the ages of twenty and thirty, Maria was sectioned in a psychiatric hospital nine times equating to nearly two years of her life, for reasons from severe depression, severe mania, post traumatic stress disorder and psychotic episodes. Throughout this decade of her life she suffered more tragedy than most people will experience in their whole life time. This book is divided into three parts, each based upon an emotional state of mind, so this book will take you on an emotional journey from the darkest and most painful states of mind that any human being can experience, through to an obscure and different world from our own, that is only experienced during psychosis, and finally to a heart felt and much desered emotionally charged positive recovery. The poems in this book cover all aspects of life from pain, suffering and grief, to love, life and recovery. This book starts with a brief autobiography of the authors shockingly traumatic rollercoaster of a life, so you will be able to engage completely in the heartfelt and brutally authentic emotions that these poems convey. The author has a blog and a youtube channel which you can access for free to accompany this beautiful collection of poems. She also has created a website in which individuals share their own personal experiences of mental illness in an aim to promote the breakdown of the stigma which is still unfortunately surrounding mental illness.

You can find the author on Twitter @PixieWings8 where she has a continually increasing fan base of followers which currently stands at around 25,000. This is a must read collection of poems that really illustrates the workings and emotions of someone suffering with multiple mental illnesses from real life experience, including bipolar disorder and Post Traumatic Stress Disorder.

Investigating Depression and Bipolar DisorderReal Facts for Real LivesEnslow Publishing, LLC

This true story chronicles a mother's journey of trials and doubts, faith and triumph, through the rocky terrain of her son's life with Asperger syndrome, bipolar disorder, depression, and addiction. The reader has a mom's-eye view of the challenges she and her family face as they navigate through the public school system, private rehab programs, the Texas justice system, and normal life as evangelical Christians with a child who doesn't seem to "fit the mold" of expectation in any given system, let alone in his own mother's idea of what her first son would be like. While frightening and painful at times, this is one mother's story of faith and surrender in the face of insurmountable obstacles and of God's presence and faithfulness over decades of time. This ongoing story is full of victory, but more important than any single outcome is the fruit of peace and joy that was discovered along the way as the author chose to offer up all outcomes to the only One who loves better than a mother, whose signature moves are redemption, healing, and rescue.

Drinks, Drugs, Delirium & Why Sober Is the New Cool was published in 2013. It features a new disorder, prolonged grief disorder, as well as codes for suicidal behavior available to all clinicians of any discipline without the requirement of any other diagnosis. With contributions from over 200 subject matter experts, this updated volume boasts the most current text updates based on the scientific literature. Now in four-color and with the ability to authenticate each printed copy, DSM-5-TR provides a cohesive, updated presentation of criteria, diagnostic codes, and text. This latest volume offers a common language for clinicians involved in the diagnosis and study of mental disorders and facilitates an objective assessment of symptom presentations across a variety of clinical settings—inpatient, outpatient, partial hospital, consultation-liasion, clinical, private practice,

and primary care. Important updates in DSM-5-TR include 1) fully revised text for each disorder with updated sections on associated features, prevalence, development and course, risk and prognostic factors, culture, diagnostic markers, suicide, differential diagnosis, and more; 2) addition of prolonged grief disorder (PGD) to Section II; 3) over 70 modified criteria sets with helpful clarifications since publication of DSM-5; 4) fully updated Introduction and Use of the Manual to guide usage and provide context for important terminology; 5) considerations of the impact of racism and discrimination on mental disorders integrated into the text; 6) new codes to flag and monitor suicidal behavior, available to all clinicians of any discipline and without the requirement of any other diagnosis; 7) fully updated ICD-10-CM codes implemented since 2013, including over 50 coding updates new to DSM-5-TR for substance intoxication and withdrawal and other disorders”

Description This book includes 14 true stories from people with bipolar disorder or unipolar depression and their great courage and suffering, their struggles and triumphs. Edited or co-written by Katy Sara Culling, the stories are all of high quality and interest. Each story is totally unique, giving the reader a broad spectrum of mood disorder experiences to draw from, making this book useful for the sufferer, carers, and medical professional, as well as the general public who wish to educate themselves about these topics. As with mood disorders there are a wide range of treatments used, from therapy to medication and electroconvulsive therapy (ECT). All are covered in this book. As it is common for co-disorders to exist, especially alcoholism, anxiety and eating disorders, some of the stories include tales of people struggling with these issues as well as their mood disorder. That is, after all, true to life. Because peoples' experiences with mood disorders vary there is a chapter at the end explaining mood disorders and the terminology. This can be read before the stories in the book if a person feels they need to know the background information first. This means a person who knows nothing about mood disorders can pick up this book, read it, and finish with a good understanding of the subject. Comments from readers include: "I have never cried and laughed so much at stories in one book and to think they are all true is amazing. I was thankful for the factual chapter too, I learned a great deal. I wish I had had this book to read years ago when my own daughter fell ill, so that I could have appreciated just how serious a battle these people face – a battle that is not always won." Sue Willcocks "Deeply moving and important tales. The bravery of these people to tell their tales in a world full of stigma against mental illness should be commended. Katy Sara should be proud for helping to give a voice to such people." Peter O "I am so glad to know that I am not the only person who feels like this. This book empowers all people with bipolar disorder or depression. I hope it enlightens those people who laugh or don't take these illnesses seriously." Liz Broughton. "Brilliant writing, packed with information and stories that you couldn't make up if you tried. Some so very sad – these illnesses are serious business." Paul Michaels. About the Author Katy Sara Culling was born in Liverpool, North England, in January 1975, sharing her birth date rather aptly with Virginia Woolf. Daughter of Sue and Paul Culling, her family moved back to its roots in Derbyshire, where she grew up along with her younger sister Beth, in the village of Castle Donington, on the Derbyshire-Leicestershire border. However, even as young as 5 she exhibited symptoms of bipolar disorder. She attended a private school for girls, Loughborough High School, where she was a high achieving student. Unfortunately, due to bullying and also to numb her mania and depression, she developed anorexia nervosa and began to self-harm. Katy Sara then went to The University of Nottingham, where she studied Biochemistry and Nutrition. She did her (1st class) thesis on alcohol and metabolism, interested in the psychology of Alcoholism. All this was done despite considerable illness including over 60 suicide attempts and purging-type anorexia – and yet more bullying. Her good work at Nottingham lead to an offer of a place at The University of Oxford, where she studied for a PhD (DPhil) in Clinical Medicine. In her final year she became so ill with bipolar disorder that she was in hospital (first as a day patient, then an inpatient, and eventually a sectioned inpatient). During that year and a half she attempted suicide over 300 times, dying twice, only to be revived. She finally, at the age of 28 got a diagnosis of bipolar disorder and the correct medication, and had been mostly fine ever since. She later wrote up her PhD thesis and published her resu

Behind the Wall: The True Story of Mental Illness as Told by Parents provides a shared voice for millions of people who advocate for a child or loved one living with mental illness, fosters understanding for society at-large, and delivers an ultimately hopeful read. The seven true stories in this book, told by nine parents, were selected from interviews conducted by sisters Mary and Elin Widdifield, and interwoven with one sister's own experiences. Told with remarkable candor, these stories offer more insight than any single story or academic analysis. When mental illness enters the national discussion, it typically comes in the wake of a violent tragedy, attracting temporary attention and further misunderstanding. Behind the Wall posits that the true story of mental illness can be told most accurately by the people in the trenches: the parents who watched it all unfold.

This book is about a revolutionary understanding the author has had as a result of his fifty plus years experience as a psychiatrist and child psychiatrist. That fact is that Bipolar Disorders are occurring in epidemic proportions in the U.S. and else where, especially in children, but few of us are aware of it. Most children and adults who are seen by the psychiatrists and child psychiatrists especially, are suffering from Bipolar Disorders but most of them are misunderstood to have problems like A.D.H.D; O.D.D. , D.M.D.D. borderline personality disorders, PTSD, Conduct Disorders, narcissistic personality, Autism Spectrum, depression or anxiety only, and this misdiagnosis results in wrong and ineffective treatment measures that can lead to unnecessary suffering and even catastrophe. Many people so misunderstood, misdiagnosed and given wrong treatments even end their lives or are incarcerated repeatedly as unrecognized Bipolar Disorders can lead to very troubled and troublesome lives. The number of children and adults suffering from unrecognized Bipolar Disorders is so high that it is destroying the very fabric of our society and humanity itself. Bipolar disorders being genetic illnesses, is spreading like wild fire through succeeding generations, causing untold suffering for those affected by it and their near and dear ones and the country itself, and it will only get worse with each generation, unless we understand this fact and address it as a national catastrophe second to none. The author describes in detail what he has learned as to how Bipolar Disorders present in children and adults in manners that confound professionals and others that lead to misdiagnosis and disaster for the patient and points out features that will help professionals recognize the true nature of the problem so that proper measures can be instituted for the benefit of everyone. The author analyzes the cases of some mass shooters and point out how they suffered from Bipolar Disorders that resulted in the tragedy that even very experienced experts failed to understand and how these mass shooters started showing signs of Bipolar Disorders since childhood, that professionals could not recognize for what they were, gave wrong and even dangerous treatments, all of which ended up in unnecessary death and mayhem. Some of the other findings the author presents in this book from his experience is the association of Bipolar Disorders with other psychiatric phenomena like OCD, anorexia nervosa, body dysmorphia, I.B.S., Misophonia, catatonia and others that they could all be manifestation of the same or related genetic defects. The author characterizes Bipolar disorder as the Great Masquerader in psychiatry and how professionals can go beyond the veiling and identify the true problem: Bipolar Disorders. The surprising fact that most children and adults psychiatrists see, even in outpatient clinics are suffering from Bipolar Disorders, is a finding that will surprise even the most experienced of psychiatrists. American Psychiatric Association has confused the understanding and identification of Bipolar disorders in children by introducing the erroneous concept of D.M.D.D. The author points out why this is an error and this error should be rectified for the sake of all children so misunderstood and mistreated. The connection between Bipolar disorders, severe drug use, disintegration of families, homelessness and the disintegration of our society are all addressed in this book. So also, most importantly, since Bipolar Disorders are genetic illnesses and the wide spread occurrence of this illness is not understood by most people, it is spreading like wild fire through generations . A cure for this problem by ultimately correcting the genetic errors should be the country's #1 task after COVID is defeated. The author also predicts ADMD will cease to be a true condition within fifty years and why!

True Stories from People Who Live with Mental Illness

This is a true story about a girl named Justice, a ward of the state who was placed up for adoption due to severe child abuse. She was not adopted and aged out of states care at seventeen years old from multiple orphanages,group homes and placements.Along side this story is the true story about Jessica Parker who attempted suicide at the New Hampshire state prison for women by hurling herself into a razor wire fence. You will find out how these two lives intertwine after several years of being missed diagnosed with bipolar disorder and other psychiatric disorders. Finally, the truth comes out and the proper diagnosis is given. Here you will find the detailed contents of an individual suffering from borderline personality disorder, you will see how PTSD and borderline impacts the lives of these individuals. You will read how Marsha Linehan DBT skill-building books changed and saved the lives of these individuals.

The moonlight sliced into the alleyway as twenty-one-year-old Kirk Miller opened his eyes and stared at the night sky. His head throbbed as the world spun gently. The cold, hard cement felt oddly soothing, but even with all the alcohol and drugs flowing through his veins, Kirks mind was still racing. It would be a year until he was told that those feelings were related to what professionals called a manic episode. Welcome to the world of bipolar disorder. It is no secret that bipolar disorder is one of the most misunderstood and devastating mental disorders for the diagnosed and those who care for them. But what if there were a cure? In his compelling memoir, Miller details how he was diagnosed with the most severe form of bipolar disorder, was told he would never lead a normal life, and eventually refused to accept his fate. As he began a determined search for answers through research, educated guesses, and risks that nearly cost him his life, Miller shares how he stumbled onto a new method of treating his disorder that, remarkably, helped him achieve a full recovery. Chaos to Cured shares the true story of one mans courageous journey to finding a cure for bipolar disorder with the hope that everyone will one day have a second chance in life.
