In this updated edition of the industry staple, veteran media executive Jeff Linn relates business theory and practice across key global market segments—film, television, and online/digital—providing you with an insider's perspective that can't be found anywhere else. Learn how an idea moves from concept to profit and how distribution dominates the bottom line: Hollywood stars may make the headlines, but marketing and distribution are the behind-the-scenes drivers converting content into cash. The third edition: Includes perspectives from key industry executives at studios, networks, agencies and online leaders, including Fox, Paramount, Lucasfilm, Endeavor, Tencent, MPAA, YouTube, Amazon, and many more. Explores the explosive growth of the Chinese market, including box office trends, participation in financing Hollywood feature films, and the surge in online usage; illustrates how online streaming leaders like Netflix, Amazon, Apple, YouTube, Hulu and Facebook are changing the way TV content is distributed and consumed, and in cases how these services are moving into theatrical markets. Analyzes online influences and disruption throughout the distribution chain, and explains the risks and impact stemming from changing access points (e.g., stand-alone apps), delivery methods (over-the-top) and consumption patterns (e.g., binge watching); Breaks down historical film windows, the economic drivers behind them, and how online and digital delivery applications are changing the landscape. Linn provides the virtual apprenticeship you need to demystify and manage the complicated media markets, understand how digital distribution has impacted the ecosystem, and glimpse into the future of how film and television content will be financed, distributed and watched. An online eResource contains further discussion on topics presented in the book.

This book offers a broad and global level description of the current status of wastewater use in agriculture and then brings the readers to various places in the MENA Region and Europe to explain how some countries and regions have addressed the challenges during implementation. On a global scale, over 20 million hectares of agricultural land are irrigated using wastewater. This is one good, and perhaps the most prominent, example of the safe use potential of wastewater. Water scarcity and the cost of energy and fertilisers are among the main factors driving millions of farmers and other entrepreneurs to make use of wastewater. In order to address the technical, institutional, and policy challenges of safe water reuse, developing countries and countries in transition need clear institutional arrangements and more skilled human resources, with a sound understanding of the opportunities and potential risks of wastewater use. Stakeholders in wastewater irrigation who need to implement or improve current conditions, find it difficult to gather the necessary information on practical implementation aspects. The main objective of this book is to bridge that gap.

This publication reviews wooden furniture markets in United States, Canada, China, Japan, Egypt, France, Germany, Belgium, the Netherlands, Luxembourg, Spain, Italy, Denmark, and Sweden. For each country, it provides an overview of basic demand factors and market drivers, the domestic furniture industry, market trends and developments, distribution channels, and market access conditions. It deals with technical standards, as well as international and national certification schemes in the furniture sector, and identifies furniture networks and clusters. It outlines a strategy for developing the wooden furniture sector in tropical countries and outlines step-by-step value-added processing of wooden furniture in tropical countries, based on local conditions. It also includes statistical data, selected German furniture standards, a list of useful contacts in China, and a list of members of the Global Forest and Trade Network.

WINNER 2009 CHOICE AWARD OUTSTANDING ACADEMIC TITLE! Nanotechnology is no longer a subdiscipline of chemistry, engineering, or any other field. It represents the convergence of many fields, and therefore demands a new paradigm for teaching. This textbook is for the next generation of nanotechnologists. It surveys the field's broad landscape, exploring the physical basics such as nanorobotics, nanofluidics, and nanomechanics as well as industrial concerns such as manufacturing, reliability, and safety. The authors then explore the vast range of nanomaterials and systematically outline devices and applications in various industrial sectors. This color text is an ideal companion to Introduction to Nanoscience by the same group of esteemed authors. Both titles are also available as the single volume Introduction to Nanoscience and Nanotechnology Qualifying instructors who purchase either of these volumes (or the combined set) are given online access to a wealth of instructional materials. These include detailed lecture notes, review summaries, slides, exercises, and more. The authors provide enough material for both one- and two-semester courses.

Aerosol Science and Technology: History and Reviews captures an exciting slice of history in the evolution of aerosol science. It presents in-depth biographies of four leading international aerosol researchers and highlights pivotal research institutions in New York, Minnesota, and Austria. One collection of chapters reflects on the legacy of the Pasadena smog experiment, while another presents a fascinating overview of military applications and nuclear aerosols. Finally, prominent researchers offer detailed reviews of aerosol measurement, processes, experiments, and technology that changed the face of aerosol science. This volume is the third in a series and is supported by the American Association for Aerosol Research (AAAR) History Working Group, whose goal is to produce archival books from its symposiums on the history of aerosol science to ensure a lasting record. It is based on papers presented at the Third Aerosol History Symposium on September 8 and 9, 2006, in St. Paul, Minnesota, USA.

Are you at risk of being scammed? Former con artist and bestselling author of Catch Me If You Can Frank Abagnale shows you how to stop scammers in their tracks. Maybe you're wondering how to make the scam phone calls stop. Perhaps someone has stolen your credit card number. Or you've been a victim of identity theft. Even if you haven't yet been the target of a crime, con artists are always out there, waiting for the right moment to steal your information, your money, and your life. As one of the world's most respected authorities on the subjects of fraud, forgery, and cyber security, Frank Abagnale knows how scammers work. In Scam Me If You Can, he reveals the latest tricks that today's scammers, hackers, and con artists use to steal your money and personal information--often online and over the phone. Using plain language and vivid examples, Abagnale reveals hundreds of tips, including:

- The best way to protect your phone from being hacked
- The only time you should ever use a debit card
- The one type of photo you should never post on social media
- The only conditions under which you should use WiFi networks at the airport
- The safest way to use an ATM

With his simple but counterintuitive rules, Abagnale also makes use of his insider intel to paint a picture of cybercrimes that haven't become widespread yet.
