

## Donne E Alcol: L'equilibrio Desiderato (Teorie E Oggetti Delle Scienze Sociali)

*Jeyson Princeps, un semplice giovane colombiano alle prese con i tipici problemi della giovane età, si ritroverà d’un tratto costretto a prendere una decisione che avrà enormi ripercussioni negli anni a venire, mutando radicalmente la sua vita e quella di molte altre persone. Un solo anello e tutto cambia. Presto il nostro eroe si ritroverà a sgombrare in un mare infestato di pericoli e di forze oscure che branno il dominio del mondo. Il giovane Jeyson insieme ai tre yuristei e alla dolce quando seducente Dayana, senza dimenticarci il fedelissimo amico a quattro zampe - Oscar, spalancheranno la porta di una realtà spesso per molti di noi ben avviluppata sotto fitti strati di oscurità. Azione, colpi di scena, suspense, tradimenti, personaggi dalle peculiarità più uniche che rare e luoghi reali che viaggiano a braccetto con luoghi reali dell’immaginazione sono tutti i contorni che ci condurranno all’atto finale quando lo scontro tra le due forze nemiche si consumerà in una brutale battaglia. È proprio con quest’opera, la guerra dei falsi Dei, che ha inizio la fantastica trilogia di Jeyson Princeps. Un giovane che ha molto in comune con molti di noi; e così come per molti di noi, anche per lui presto saranno ineluttabile la presenza di bivi e scelte di vita cui esito, giusto o sbagliato che sia, si protrarrà fino all’ultimo respiro. Il nostro protagonista potrebbe sembrare il classico eroe amato dai ragazzi, ma la verità è che nel cuore di Jeyson brucia il desiderio di essere lui la persona che vi accompagnerà in un’avventura tanto avvincente quanto fantastica: quel mondo immaginario dov’è possibile staccarsi per un momento dalle difficoltà della quotidianità e vivere un sogno a occhi aperti.*

*Multi-generational Family Therapy reveals the limits of the medical model in treating mental and relational problems. It instead provides a toolkit for therapists, observing family functioning over at least three generations to explore the developmental history of the family in order to discover links between past trauma and broken emotional bonds, and current problems experienced by family members. Maurizio Andolfi honours the voices of children in therapy and enlists them as the key to unlocking unresolved family issues. The book provides an experiential model of intervention that centres on creativity and humanity as the best way to build an alliance and work with a family in crisis. Demonstrating with case examples, Andolfi outlines the relational skills and inner self of the therapist, focusing on the ability to be direct, authentic and emphatic. The use of relational questioning, silence, body language, physical contact and movement in therapy are explored in depth. Multi-generational Family Therapy will be of interest to anyone working with individuals, couples and families including child, adolescent and adult psychotherapists, psychiatrists, psychologists and counsellors. It will also prove useful to private practitioners, social workers, doctors, paediatricians and educators*

Sitting at his desk, Bernardo Soares imagined himself free forever of Rua dos Douradores, of his boss Vasques, of the errand boy, the post boy, even the cat. But if he left them all tomorrow and discarded the suit of clothes he wears, what else would he do? Because he would have to do something. And what suit would he wear? Because he would have to wear another suit. A self-deprecating reflection on the sheer distance between the loftiness of his feelings and the humdrum reality of his life, *The Book of Disquiet* is a classic of existentialist literature.

Many new drugs on the market are chiral compounds, that is, they can exist in two non-superimposable mirror-image forms. Asymmetric catalysis encompasses a large variety of processes for obtaining such compounds. The performance of the catalyst in those processes largely depends on the ligand that makes up the catalyst. This book describes the most relevant ligand libraries for some key processes, including an overview of the state of art and the key mechanistic aspects that favor a high catalytic performance. Key Features: The book presents historical content from the time of discovery for each family of ligands. Provides a description of the synthetic route and the ligand library’s application in various catalytic asymmetric reactions Suitable as supplementary reading for courses targeting the design, synthesis and application of chiral catalysts, asymmetric catalysis and sustainable production Edited by a distinguished scientist in the field, the book has a diverse audience including research groups in homogeneous catalysis, particularly asymmetric transformations

Mental health services have changed completely in the UK, and the new edition of ABC of Mental Health has been thoroughly updated and revised to reflect this. Providing clear practical advice on how to recognise, diagnose and manage mental disorders successfully and safely, with sections on selecting drugs and psychological treatments, and improving compliance, ABC of Mental Health also contains information on the major categories of mental health disorders, the mental health needs of vulnerable groups (such as the elderly, children, homeless and ethnic minorities) and the psychological treatments. Fully up to date with recent mental health legislation, this new edition is as comprehensive as it is invaluable. By covering the mental health needs of special groups, this ABC equips GPs, hospital doctors, nurses, counsellors and social workers with all the information they need for the day to day management of patients with mental health problems.

*Counselling for Alcohol Problems, third edition, is a practical and bestselling guide to working with people who have problems with their use of alcohol. It is the key book recommended by most alcohol counselling courses in the UK, including the Scottish national alcohol counsellors training scheme. The author provides clear guidance for counsellors and demonstrates the need to treat every client as an individual, attempting to understand and therefore enable the client to understand, what they are doing and why. This new edition includes: – New content on the current political, social and counselling context surrounding alcohol use – A wider range of case-studies – New ideas that help students and trainees develop the skills and strategies they need for working with their clients – Further guidance for generic or non-alcohol counsellors who face alcohol problems with their clients. This third edition is an invaluable resource for practitioners, both those specialising in work with alcohol misusers and those who encounter problem drinkers in the context of a more general counselling practice.*

*This is the first book to set out a full range of research strategies for evaluating the clinical practice of acupuncture. Leading acupuncturists and researchers with international reputations share their expertise. They illustrate their descriptions with practical examples of what has worked and what has not. It outlines many of the key challenges in the field. These challenges relate to the nature of acupuncture and the gap between current research evidence and the actual experiences of acupuncturists in the field. By focusing in the chapters on key research questions, rather than methods, the book has a user-friendly feel. Each chapter is easily accessible with brief explanations of research designs as well as vignettes of relevant past research. The book is based on a deep understanding of acupuncture, with its inherent complexity in practice, whether based on traditional principles or more modern concepts. By incorporating a more sophisticated understanding of the field, this book details a range of strategies aiming to develop the evidence base with the utmost rigour. It is the first book on acupuncture research to take this unique view, integrating the very best of evidence-based medicine with a genuine sensitivity to the discipline of acupuncture, from its traditional and holistic roots to its more modern interpretations.*

*Reminiscent of Scheherazade and One Thousand and One Nights, Gianni Rodari's Telephone Tales is many stories within a story. Every night, a traveling father must finish a bedtime story in the time that a single coin will buy. One night, it's a carousel that adults cannot comprehend, but whose operator must be some sort of magician, the next, it's a land filled with butter men who melt in the sunshine Awarded the Hans Christian Anderson Award in 1970, Gianni Rodari is widely considered to be Italy's most important children's author of the 20th century. Newly re-illustrated by Italian artist Valerio Vidali (The Forest), Telephone Tales entertains, while questioning and imagining other worlds.*

These Guidelines review the use of medicines such as methadone, buprenorphine, naltrexone and clonidine in combination with psychosocial support in the treatment of people dependent on heroin or other opioids. Based on systematic reviews of the literature and using the GRADE approach to determining evidence quality, the guidelines contain specific recommendations on the range of issues faced in organizing treatment systems, managing treatment programmes and in treating people dependent on opioids. Developed in collaboration with internationally acclaimed experts from the different regions of the globe, this book should be of interest to policy makers, program managers, and clinicians everywhere who seek to alleviate the burden of opioid dependence.

The study of migrant populations poses unique challenges owing to the mobility of these groups, which may be further complicated by cultural, educational, and linguistic diversity as well as the legal status of their members. These barriers limit the usefulness of both traditional survey sampling methods and routine public health surveillance systems. Since nearly 1 in 7 people in the world is a migrant, appropriate methodological approaches must be designed and implemented to capture health data from populations. This effort is particularly important because migrant populations, in comparison to other populations, typically suffer disparities related to limited access to health care, greater exposure to infectious diseases, more occupational injuries, and fewer positive outcomes for mental health and other health conditions. This path-breaking handbook is the first to engage with the many unique issues that arise in the study of migrant communities. It offers a comprehensive description of quantitative and qualitative methodologies useful in work with migrant populations. By providing information and practical tools, the editors fill existing gaps in research methods and enhance opportunities to address the health and social disparities migrant populations face in the United States and around the world.

Long hailed as a seminal work of modernism in the tradition of Joyce and Kafka, and now available in a supple new English translation, Italo Svevo's charming and splendidly idiosyncratic novel conducts readers deep into one hilariously hyperactive and endlessly self-deluding mind. The mind in question belongs to Zeno Cosini, a neurotic Italian businessman who is writing his confessions at the behest of his psychiatrist. Here are Zeno's interminable attempts to quit smoking, his courtship of the beautiful yet unresponsive Ada, his unexpected-and unexpectedly happy--marriage to Ada's homely sister Augusta, and his affair with a shrill-voiced aspiring singer. Relating these misadventures with wry wit and a perspicacity at once unblinking and compassionate, Zeno's Conscience is a miracle of psychological realism.

In this intriguing blend of the commonplace and the ancient, Jean Bottéro presents the first extensive look at the delectable secrets of Mesopotamia. Bottéro’s broad perspective takes us inside the religious rites, everyday rituals, attitudes and taboos, and even the detailed preparation techniques involving food and drink in Mesopotamian high culture during the second and third millennia BCE, as the Mesopotamians recorded them. Offering everything from translated recipes for pigeon and gazelle stews, the contents of medicinal teas and broths, and the origins of ingredients native to the region, this book reveals the cuisine of one of history’s most fascinating societies. Links to the modern world, along with incredible recreations of a rich, ancient culture through its cuisine, make Bottéro’s guide an entertaining and mesmerizing read.

This highly successful reader presents the interactionist approach to the study of deviance, examining deviance as a phenomenon that is constituted through social interpretations and the reactions of persons caught up in this social process. This book focuses on issues such as how individuals interpret and label people, how people relate to one another based on these interpretations, and the consequences of these social processes. This perspective helps students understand both social process in general and the sociology of deviance in particular.

"Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The aims of International perspectives on spinal cord injury are to: --assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; --make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.

Per lui la vita è un continuo fuggendo. Dalla moglie. Dall’amante. Lei è una donna affrontando. Una persona che vuole vedere il bene in ogni cosa, ma è ben più sveglia di quanto voglia apparire. L'altra è una donna mediamente, nella vita quotidiana, ma assolutamente quando è tra le lenzuola. Lui vive in completa sintonia con la propria sessualità. Nessun «vorrei ma non posso», nessuna complicazione che abbia a che fare con l’etica, la morale, il rispetto reciproco... Protagonista di Una bellissima notte senza luna è il matrimonio: l’ordine che si contrappone all’anarchia della confusione. Ma «gli esseri umani non sono in grado di gestire l’anarchia. La agognano, ma una volta ottenuta si comportano come ragazzini di terza media in un’ora buca». Un romanzo a più voci avvincente come un thriller in cui i fatti e i pensieri dei protagonisti si intrecciano fino a formare un mosaico che rivela solo nell’insieme la panoramica complessiva della storia. Scritto in una lingua cinematografica e visiva, accattivante e ironica, sotto un’apparente leggerezza tocca i nervi scoperti della vita di coppia, sessuale e non, e gli incagli psicologici di una generazione confusa, che ha perso il senso della realtà, ma anche il privilegio e la magia dell’illusione.

*For readers of The Astronaut Wives Club, The Mercury 13 reveals the little-known true story of the remarkable women who trained for NASA space flight. In 1961, just as NASA launched its first man into space, a group of women underwent secret testing in the hopes of becoming America's first female astronauts. They passed the same battery of tests at the legendary Lovelace Foundation as did the Mercury 7 astronauts, but they were summarily dismissed by the club's boss at NASA and in Capitol Hill. The USSR sent its first woman into space in 1963; the United States did not follow suit for another twenty years. For the first time, Martha Ackmann tells the story of the dramatic events surrounding these thirteen remarkable women, all crackjack pilots and patriots who sometimes sacrificed jobs and marriages for a chance to participate in America's space race against the Soviet Union. In addition to talking extensively to these women, Ackmann interviewed Chuck Yeager, John Glenn, Scott Carpenter, and others at NASA and in the White House with firsthand knowledge of the program, and includes here never-before-seen photographs of the Mercury 13 passing their Lovelace tests. Despite the crushing disappointment of watching their dreams being derailed, the Mercury 13 went on to extraordinary achievement in their lives: Jerrie Cobb, who began flying when she was so small she had to sit on pillows to see out of the cockpit, dedicated her life to flying solo missions to the Amazon rain forest; Wally Funk, who talked her way into the Lovelace trials, went on to become one of the first female FAA investigators; Janey Hart, mother of eight and, at age forty, the oldest astronaut candidate, had the political savvy to steer the women through congressional hearings and later helped found the National Organization for Women. A provocative tribute to these extraordinary women, The Mercury 13 is an unforgettable story of determination, resilience, and inextinguishable hope.*

Counselling for Alcohol Problems

Substance use and related addictive disorders rate amongst the top four risk factors contributing to the global burden of disease and form an increasingly important part of medical and healthcare practice. Substance use disorders can cause, mimic, underlie or complicate a large number of common medical and psychiatric disorders. Making a correct diagnosis of the substance use disorder can facilitate clinical diagnosis, avoid unnecessary tests, shorten the hospital stay and make the clinician's and patient's life easier and safer. Part of the successful Oxford Specialist Handbooks series, the second edition of Addiction Medicine is a concise and practical guide for students, practitioners of medicine and other health professions who come into contact with people with substance use disorders. Providing up-to-date practical assessment, diagnosis, treatment and management options, this edition expands on the first edition through updated content and global coverage of addiction medicine. Edited by a global team of addiction specialists from multiple disciplines, Addiction Medicine, Second edition contains everything you need to know to assist in the assessment, diagnosis and clinical management of patients with substance use and related addictive disorders.

This report is part of WHO's response to the 49th World Health Assembly held in 1996 which adopted a resolution declaring violence a major and growing public health problem across the world. It is aimed largely at researchers and practitioners including health care workers, social workers, educators and law enforcement officials.

In tema di alcolismo, il rapporto femminile con l'alcol ha una su autonomia specifica. Il bere eccessivo è considerato un comportamento deviante, ma per tante donne può significare espressione di sé, affermazione, rivalsa, conforto e rimedio alla solitudine. Alle cause e alle variabili insite in ogni forma di dipendenza, si sommano così dinamiche tipicamente femminili che vengono indagate dal punto di vista storico, sociologico, statistico.

*Surgical site infections are caused by bacteria that get in through incisions made during surgery. They threaten the lives of millions of patients each year and contribute to the spread of antibiotic resistance. In low- and middle-income countries, 11% of patients who undergo surgery are infected in the process. In Africa, up to 20% of women who have a caesarean section contract a wound infection, compromising their own health and their ability to care for their babies. But surgical site infections are not just a problem for poor countries. In the United States, they contribute to patients spending more than 400 000 extra days in hospital at a cost of an additional US \$10 billion per year. No international evidence-based guidelines had previously been available before WHO launched its global guidelines on the prevention of surgical site infection on 3 November 2016, and there are inconsistencies in the interpretation of evidence and recommendations in existing national guidelines. These new WHO guidelines are valid for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.*
