A process was designed to evaluate the sustainability and potential marketability of USDA Forest Service patented technologies. The process was designed and tested jointly by the University of North Carolina, the University of Michigan, Partners for Strategic Change, and the USDA Forest Service. Two technologies were evaluated: a fiber-based product and a wood fiber/fiberglass composite technology. The results indicate several different ways in which the technologies might be exploited to produce new commercial products for both domestic and international markets, through licensing of the patents and other agency/industry partnerships. This report represents the initial effort by the Forest Service to work in partnership with business schools to evaluate the commercial potential of patented agency technologies and locate potential licensees and cooperators interested in utilizing the technologies. The Forest Service will seek additional cooperative ventures with university business schools to develop business plans for other patented, but as yet unlicensed, technologies as the next step in the process of commercializing these technologies.

Plants play a vital role to life on planet Earth. They harness the energy of the sun, making them the first link on every food chain. They take in carbon dioxide and produce the oxygen we need to breathe. This innovative book lets readers learn all about plants in a hands-on way with cool experiments they can do in their own backyards and homes. Step-by-step instructions and full-color photographs ensure that each activity is easy to follow. Handy "What's Happening" sidebars explain the scientific principles behind each experiment, helping readers grasp abstract concepts.

Today, many Americans are concerned about global warming. According to a March 2007 MSNBC poll, 86% of Americans believe global warming is a critical or important threat, and according to an April 2007 ABC News/The Washington Post/Stanford University poll, 80% of Americans say they are willing to make changes in their lives to help the environment, even if it means personal inconvenience. This guide of 50 practical steps is a positive and uplifting presentation of a serious subject organized in a fun, easy-to-read format. Each step is a simple way you can help in the fight against global warming and feel good about being part of the solution to the current environmental crisis. Sample steps include: Determine Your Carbon Footprint Buy Green Energy Plant a Rooftop Garden Take an Eco-Vacation Check Your Tire Pressure Compost Your Food Waste Recycle Your Shoes Use Petrochemical-Free Cosmetics Buy Locally Grown Foods Wear Organic Clothing Go Vegetarian for a Day Invest in the Solution

This book emphasizes the important message that architects and structural engineers must strive to ensure that the buildings they design and construct should not be major contributors to climate change. Rather, they should be exploring the use of green materials and building methods – such as timber, wood, and associated materials – in order to safeguard the environment. These sustainable materials are not only environmentally friendly, but they have the added benefit of being easy to manufacture, cost effective, often locally available, and easily replenished. Moreover, it has been demonstrated that wood and timber are viable materials in the construction of a wide variety of building types, including medium and high-rise buildings. The Importance of Wood and Timber in Sustainable Buildings brings together a distinguished group of contributors from different cultures and building traditions to address why now is the time to rethink our construction methods and explore replacing many of the carbon intensive materials that are currently being used with wood and timber.

Surveys find that over 80 percent of Americans agree with the goals of the environmental movement. Sadly, most Americans admit to doing little more than basic recycling when it comes to acting on that disposition. What is the reason for this great divide between environmental sentiment in this country and individual actions? Author and environmental consultant Crissy Trask seeks to answer this question-and solve the disparity-with a new book that makes it easy to be an environmentalist, no matter how busy or hectic your lifestyle. This is a day to day guide with simple, practical suggestions that anyone can put into action.

A definitive how-to guide to the complex environmental issues of the twenty-first century offers solutions to the difficult choices of everyday living to promote an eco-friendly lifestyle, covering issues as grocery shopping, house cleaning, travel, work, and investing, while offering information on simple changes that can transform the planet's environmental health. Original. 20,000 first printings. Climate change is broadly recognized as a key environmental issue affecting social and ecological systems worldwide. At the Cancun summit of the United Nations Framework Convention on Climate Change's 16th Conference, the parties jointly agreed that the vulnerable groups particularly in developing countries and whose livelihood is based on land use practices are the most common as in most cases their activities are shaped by the climate. Therefore, solving the climate dilemma through mitigation processes and scientific research is an ethical concern. Thus combining the knowledge systems of the societies and scientific evidences can greatly assist in the creation of mechanisms for sustainable development in a situation of changing climate. International Humankind Kolleg focusing on "knowledge systems of societies and Climate Change" was organized at ISE. This event was of unique importance, as the year 2011-12 was celebrated as the 60th Anniversary of Diplomatic Relations between India and Germany with the motto "Germany and India - Infinite Opportunities." This volume is the outcome of the papers presented during the IHK 2011 at IS. In this illustrated and easy-to-use guide, noted pediatrician Dr. Alan Greene, a leading voice of the green baby movement, advises parents how to make healthy green choices for pregnancy, child, and baby care—from feeding your baby the best food available to using medicines wisely. Consumer advocate Jeanette Pavini includes information for making smart choices and applying green principles to a whole new universe of products from zero-VOC paints for the nursery, to pure and gentle baby's delicate skin, to the eco-friendly diapers now in the marketplace, as well as specific recommendations for hundreds of other products.
