

Ecdl Project Planning: Con Project 2007

This book constitutes the refereed proceedings of the Third International Conference on Autonomic and Trusted Computing, ATC 2006, held in Wuhan, China in September 2006. The 57 revised full papers presented together with two keynotes were carefully reviewed and selected from 208 submissions. The papers are organized in topical sections.

This book constitutes the refereed proceedings of the 8th International Conference on Computers Helping People with Special Needs, ICCHP 2002, held in Linz, Austria in July 2002. The 155 revised papers presented were carefully reviewed and selected. The papers evaluate how various fields in computer science can contribute to helping people with various kinds of disabilities. Among the technical fields evaluated are information systems, information society, computer-assisted education, human-computer interaction, interface design, virtual reality, Internet applications, mobile computing, assistive technology, communication technology, multimedia, display technology, haptic computing, audio interfaces, and societal and administrative issues.

"This book covers a wide range of the most current research in the development of innovative web-based learning solutions, specifically facilitating and augmenting learning in diverse contemporary organizational settings"--Provided by publisher.

The aim of this Research Topic for Frontiers in Psychology under the section of Cognitive Science and Frontiers in Neurorobotics is to present state-of-the-art research, whether theoretical, empirical, or computational investigations, on open-ended development driven by intrinsic motivations. The topic will address questions such as: How do motivations drive learning? How are complex skills built up from a foundation of simpler competencies? What are the neural and computational bases for intrinsically motivated learning? What is the contribution of intrinsic motivations to wider cognition? Autonomous development and lifelong open-ended learning are hallmarks of intelligence. Higher mammals, and especially humans, engage in activities that do not appear to directly serve the goals of survival, reproduction, or material advantage. Rather, a large part of their activity is intrinsically motivated – behavior driven by curiosity, play, interest in novel stimuli and surprising events, autonomous goal-setting, and the pleasure of acquiring new competencies. This allows the cumulative acquisition of knowledge and skills that can later be used to accomplish fitness-enhancing goals. Intrinsic motivations continue during adulthood, and in humans artistic creativity, scientific discovery, and subjective well-being owe much to them. The study of intrinsically motivated behavior has a long history in psychological and ethological research, which is now being reinvigorated by perspectives from neuroscience, artificial intelligence and computer science. For example, recent neuroscientific research is discovering how neuromodulators like dopamine and noradrenaline relate not only to extrinsic rewards but also to novel and surprising events, how brain areas such as the superior colliculus and the hippocampus are involved in the perception and processing of events, novel stimuli, and novel associations of stimuli, and how violations of predictions and expectations influence learning and motivation. Computational approaches are characterizing the space of possible reinforcement learning algorithms and their augmentation by intrinsic reinforcements of different kinds. Research in robotics and machine learning is yielding systems with increasing autonomy and capacity for self-improvement: artificial systems with motivations that are similar to those of real organisms and support prolonged autonomous learning. Computational research on intrinsic motivation is being complemented by, and closely interacting with, research that aims to build hierarchical architectures capable of acquiring, storing, and exploiting the knowledge and skills acquired through intrinsically motivated learning. Now is an important moment in the study of intrinsically motivated open-ended development, requiring contributions and integration across a large number of fields within the cognitive sciences. This Research Topic aims to contribute to this effort by welcoming papers carried out with ethological, psychological, neuroscientific and computational approaches, as well as research that cuts across disciplines and approaches.

This book contains papers in the fields of Interactive, Collaborative, and Blended Learning; Technology-Supported Learning; Education 4.0; Pedagogical and Psychological Issues. With growing calls for affordable and quality education worldwide, we are currently witnessing a significant transformation in the development of post-secondary education and pedagogical practices. Higher education is undergoing innovative transformations to respond to our urgent needs. The change is hastened by the global pandemic that is currently underway. The 9th International Conference on Interactive, Collaborative, and Blended Learning: Visions and Concepts for Education 4.0 was conducted in an online format at McMaster University, Canada, from 14th to 15th October 2020, to deliberate and share the innovations and strategies. This conference’s main objectives were to discuss guidelines and new concepts for engineering education in higher education institutions, including emerging technologies in learning; to debate new conference format in worldwide pandemic and post-pandemic conditions; and to discuss new technology-based tools and resources that drive the education in non-traditional ways such as Education 4.0. Since its beginning in 2007, this conference is devoted to new learning approaches with a focus on applications and experiences in the fields of interactive, collaborative, and blended learning and related new technologies. Currently, the ICBL conferences are forums to exchange recent trends, research findings, and disseminate practical experiences in collaborative and blended learning, and engineering pedagogy. The conference bridges the gap between ‘pure’ scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, school teachers, industry-centric educators, continuing education practitioners, etc.

Il presente manuale vuole essere una guida alla nuova certificazione Ecdl Project Planning, che mira a far acquisire le competenze necessarie nell'utilizzo dei software per la gestione e programmazione dei progetti, sempre più importante nella complessa realtà economica moderna. Molte imprese, infatti, sono consapevoli delle necessità di avere figure professionali preparate nella gestione dei progetti, sovente carenti nell'utilizzo del software che, invece, costituisce un supporto indispensabile nei progetti e, anche se un'applicazione per la gestione e programmazione non può assicurare la sicura riuscita del progetto, ciò non di meno rappresenta una condizione indispensabile per permettere al Manager di progetto di seguirne lo svolgimento, intervenendo qualora imprevisti vari possono impedirne la realizzazione. Nel manuale il software di riferimento è Project 2016 su Sistemi Operativi Windows 7, 8.1 e 10, di proprietà della Microsoft(c) Corporation. Nello specifico, gli argomenti trattati si concentrano: Sulla nozione di progetto Sui vantaggi derivanti dall'utilizzo di un'applicazione di Project Management I vincoli del progetto, quali tempo, risorse e costi L'applicazione Project 2016 e le varie possibilità che offre: salvataggio in vari formati, differenti modalità di rappresentazione (Diagramma di Gantt e di Pert o reticolare) I calendari del progetto Le attività e le operazioni sulle attività: collegamenti, vincoli, attività cardine, data di scadenza, ritardi ed anticipazioni Le risorse del progetto e la formula di programmazione I costi fissi e variabili Il controllo del progetto: la previsione o baseline, aggiornamento delle attività e dell'intero progetto, attività critiche e percorso critico, nuova pianificazione di attività incomplete Funzione di stampa e report. Alla fine di ogni capitolo, inoltre, sono previste esercitazioni volte a mettere in pratiche le nozioni apprese.

Vision 2020: Looking Back 10 Years and Forging New Frontiers

For more than a decade the rapid growth of ICT and its use in education have generated a lot of changes in traditional educational structures as well as interest in defining new models for designing advanced learning solutions. This book provides an overview of international perspectives regarding the latest innovations and results in different fields of education. In particular, it is addressed to all those who are interested in exploring methodologies and extending their knowledge of current research in education and training technologies. The wide variety of contributions provides an interesting and useful account of some of the major issues and controversies facing researchers, academicians, professors, educational scientists and technologists in most of the educational contexts in which ICT is applied. Over 90 papers are featured and these are divided under headings including: Online Education and Training; Innovative Teaching and Learning Technologies; Collaborative Learning Environments; Navigation Strategies and Comprehension; Mobile Learning; Quality Issues of Distance Learning Processes; Knowledge Management and E-learning; Learning Technologies for Primary and Secondary Schools; Educational System for People with Special Needs.

The biennial Digital Review of Asia Pacific is a comprehensive guide to the state-of-practice and trends in ICT for development (ICT4D) in Asia Pacific, carrying 31 updated country reports on the theme of ICT and education.

This book presents the proceedings of the 19th International Conference on Interactive Collaborative Learning, held 21-23 September 2016 at Clayton Hotel in Belfast, UK. We are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of developments in both technology and the global markets, and the growing need for flexibility and agility are essential and challenging elements of this process that have to be addressed in general, but especially in the context of engineering education. To face these topical and very real challenges, higher education is called upon to find innovative responses. Since being founded in 1998, this conference has consistently been devoted to finding new approaches to learning, with a focus on collaborative learning. Today the ICL conferences have established themselves as a vital forum for the exchange of information on key trends and findings, and of practical lessons learned while developing and testing elements of new technologies and pedagogies in learning.

International Conference on Digital Libraries (ICDL) 2016

Idea Management Systems are web applications that implement the notion of open innovation through crowdsourcing. Typically, organizations use those kind of systems to connect to large communities in order to gather ideas for improvement of products or services. Originating from simple suggestion boxes, Idea Management Systems advanced beyond collecting ideas and aspire to be a knowledge management solution capable to select best ideas via collaborative as well as expert assessment methods. In practice, however, the contemporary systems still face a number of problems usually related to information overflow and recognizing questionable quality of submissions with reasonable time and effort allocation. This thesis focuses on idea assessment problem area and contributes a number of solutions that allow to filter, compare and evaluate ideas submitted into an Idea Management System. With respect to Idea Management System interoperability the thesis proposes theoretical model of Idea Life Cycle and formalizes it as the Gi2MO ontology which enables to go beyond the boundaries of a single system to compare and assess innovation in an organization wide or market wide context. Furthermore, based on the ontology, the thesis builds a number of solutions for improving idea assessment via: community opinion analysis (MARL), annotation of idea characteristics (Gi2MO Types) and study of idea relationships (Gi2MO Links). The main achievements of the thesis are: application of theoretical innovation models for practice of Idea Management to successfully recognize the differentiation between communities, opinion metrics and their recognition as a new tool for idea assessment, discovery of new relationship types between ideas and their impact on idea clustering. Finally, the thesis outcome is establishment of Gi2MO Project that serves as an incubator for Idea Management solutions and mature open-source software alternatives for the widely available commercial suites. From the academic point of view the project delivers resources to undertake experiments in the Idea Management Systems area and managed to become a forum that gathered a number of academic and industrial partners.

This book constitutes the refereed proceedings of the 10th European Conference on Research and Advanced Technology for Digital Libraries, ECDL 2007, held in Budapest, Hungary. The papers are organized in topical sections on ontologies, digital libraries and the web, models, multimedia and multilingual DLs, grid and peer-to-peer, preservation, user interfaces, document linking, information retrieval, personal information management, new DL applications, and user studies.

A distanza di un anno dalla pubblicazione dei primi manuali sulla certificazione Ecdl Project Planning, si è ritenuto di procedere con un'appendice di aggiornamento, stante la pubblicazione della seconda edizione del Manuale di Ecdl Project Planning con software ProjectLibre, per tener conto di colore che hanno acquistato la precedente edizione. L'appendice di aggiornamento comprende il

primo capitolo dei Manuali sull'Ecdl Project Planning, dove si sono concentrate le modifiche principali, relative alle nozioni di base della gestione dei progetti. Naturalmente le nozioni teoriche fornite sono limitate a quanto richiesto dalla prima sezione del Syllabus sulla certificazione Ecdl Project Planning, relativa agli "Strumenti per Project Management". Ed infatti, l'analisi approfondita dei vari aspetti sulla gestione dei progetti esula dai limiti del presente libro. Alla fine del manuale, peraltro, sono fornite alcune indicazioni bibliografiche sul Project Management. Sono altresì presenti degli esercizi che simulano le domande teoriche che potrebbero capitare in sede di esame nonché un'ipotesi di soluzione al Sample test che può essere scaricato dal sito Ecdl.org.

History of Computing: Learning from the Past Why is the history of computing important? Given that the computer, as we now know it, came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history. Isn't history about 'old things'? Computing, of course, goes back much further than 70 years with many earlier - vices rightly being known as computers, and their history is, of course, important. It is only the history of electronic digital computers that is relatively recent. History is often justified by use of a quote from George Santayana who famously said that: 'Those who cannot remember the past are condemned to repeat it'. It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future, but there is some circularity in this question, as the only way we will know the answer to this is to study our history. This book contains papers on a wide range of topics relating to the history of c-puting, written both by historians and also by those who were involved in creating this history. The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010.

There has never been a Online Learning Guide like this. Online Learning 40 Success Secrets is not about the ins and outs of Online Learning. Instead, it answers the top 40 questions that we are asked and those we come across in our forums, consultancy and education programs. It tells you exactly how to deal with those questions, with tips that have never before been offered in print. Get the information you need--fast! This comprehensive guide offers a thorough view of key knowledge and detailed insight. This Guide introduces everything you want to know to be successful with Online Learning. A quick look inside of the subjects covered: Abcmouse.com, Online Configuration Management Schools In Florida, Taking Online CCNA Classes, Requirements, Products, How Do I Pursue Construction Management Training?, Function, Requirements, The Importance of Taking ECDL Computer Course, Desire2Learn, Take the ITIL Foundation Live Demo, eFront is an open source eLearning platform., CompTIA Cursus/Courses, ITIL and IT compliment each other very well, Invest in your career from the comfort of your own home with Cloud Computing Foundation training, Features, What is IT Service Management?, How Do You Choose from All of the MCSE Schools Available?, Learning ECDL For Free, Requirements, ATutor, Why Should I Opt for Online Project Management Training?, LearningNI, Online and Offline Anyway You Want, Schools Cool with MCSE., Easily Search Change Management Articles, Get to know more about Web Analytics at UBC, Project Management Training, Project Management And ITIL: In Florida there are now many schools offering project management., Similar Terms, Two Types of MCSE Class Trainings and Education, Coggn0, UK Online Centres, Check and Act, OLAT, Metaco0n, Adopting Multiple Frameworks and Standards, Software Configuration Management Tutorial Knowing the Basics of Configuration Management, How comprehensive is the ITIL Expert Pathway package, and what's included?, Get a Degree in Computer Information Systems, ECDL NHS UK Learning Portal: Making Things Easier, and much more...

ICDL conferences are recognized on of the most important platform in the world where noted expert share their experiences. Many DL experts have contributed thought provoking papers in ICDL 2013. These important papers are reviewed and conceptualized into ICDL on different areas of DL proceedings. The Proceedings have two volumes and has over 1100 pages.

The four-volume set LNCS 3480-3483 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications, ICCSA 2005, held in Singapore in May 2005. The four volumes present a total of 540 papers selected from around 2700 submissions. The papers span the whole range of computational science, comprising advanced applications in virtually all sciences making use of computational techniques as well as foundations, techniques, and methodologies from computer science and mathematics, such as high performance computing and communication, networking, optimization, information systems and technologies, scientific visualization, graphics, image processing, data analysis, simulation and modelling, software systems, algorithms, security, multimedia etc.

Choosing the right people to carry out a project is essential to its success. When multiple projects are combined into a complex program, the human aspect becomes even more important. This book is the first to truly balance a complete account of the technical aspects of project and program management with a practical approach to understanding and developing the core competencies required to accomplish desired goals. On the technical side, this book is a complete introduction to predicting costs, setting schedules, and assessing risks. On the people side, it sheds new light on how to mold different personality types into a team, how to motivate the team's members, and how to produce extraordinary results. The author details the essential parts of the program management approach, describing the best way to define, organize, and schedule the work to be done, identifying risks and controlling costs during the whole process. This fourth edition has been significantly revised, with every chapter updated. The volume considers the magnitude of recent social, political, and technological changes, and the impact is represented throughout this book. Included are insights from numerous students who bring to the forefront their current real-world practices from their individual businesses, industries, and disciplines.

Solutions and Innovations in Web-Based Technologies for Augmented Learning: Improved Platforms, Tools, and Applications

The biennial Digital Review of Asia Pacific is a comprehensive guide to the state-of-practice and trends in information and communication technologies for development (ICTD) in the Asia Pacific region. This fourth edition (2009-2010) features 30 economies and four sub-regional groupings. The chapters provide updated information on ICT infrastructure, industries, content and services, key programs, enabling policies and regulation, education and capacity building, open source, and research and development initiatives, as well as ICTD challenges in each of the economies covered. The common framework that underpins these reports allows readers to undertake a comparative analysis and assess progress across Asia Pacific. In addition, regional overviews provide a synthesis of ICTD trends, regulatory issues, and lessons for managing innovation in the network economy. The thematic chapters focus on issues in ICT in education, a key area in ICTD. The authors are drawn from government, academe, industry and civil society, providing a broad perspective on the use of ICTs for human development.

A distanza di un anno dalla pubblicazione della prima edizione del Manuale sulla Ecdl Project Planning su ProjectLibre, si è ritenuto di procedere con la seconda edizione sia per correggere degli errori di ortografia che per ampliare il primo capitolo del libro, pur nei limiti di quanto richiesto dal Syllabus nel capitolo relativo agli strumenti di Project Management. Ed infatti, il presente manuale vuole essere una guida alla nuova certificazione Ecdl Project Planning, che mira a far acquisire le competenze necessarie nell'utilizzo dei software per la gestione e programmazione dei progetti, sempre pi ù importante nella complessa realt à economica moderna.

*Molte imprese, infatti, sono consapevoli delle necessit à di avere figure professionali preparate nella gestione dei progetti, sovente carenti nell'utilizzo del software che, invece, costituisce un supporto indispensabile nei progetti e, anche se un'applicazione per la gestione e programmazione non pu ò assicurare la riuscita del progetto, ci ò non di meno rappresenta una condizione indispensabile per permettere al Manager di progetto di seguirne lo svolgimento, intervenendo qualora imprevisti vari possono impedirne la realizzazione. Nel manuale il software di riferimento è ProjectLibre su Sistemi Operativi Windows 7, 8.1 e 10, di propriet à della Microsoft(c) Corporation, ed Ubuntu, versione 14.04, supportato dalla Canonical. Nello specifico, gli argomenti trattati si concentrano: * Sulla nozione di progetto. * Sui vantaggi derivanti dall'utilizzo di un'applicazione di Project Management I vincoli del progetto, quali tempo, risorse e costi. * L'applicazione ProjectLibre e le varie possibilit à che offre: salvataggio in vari formati, differenti modalit à di rappresentazione (Diagramma di Gantt e di Pert o reticolare) I calendari del progetto * Le attivit à e le operazioni sulle attivit à : collegamenti, vincoli, attivit à cardine, data di scadenza, ritardi ed anticipazioni * Le risorse del progetto e la formula di programmazione I costi fissi e variabili * Il controllo del progetto: la previsione o baseline, aggiornamento delle attivit à e dell'intero progetto, attivit à critiche e percorso critico, nuova pianificazione di attivit à incomplete * Funzione di stampa e report.
