that what you are thinking? Well, the smart contract is just a phrase used in describing computer codes that can facilitate the exchange of money, property, shares, contents and virtually anything that has value. In a blockchain network, the smart contract is a computer program that self-operates when certain conditions are met. The smart contracts run as exactly as they are programmed without any possibility of expurgation, downtime, and fraud or a third party interference. Don Tapscott, a Canadian business executive who specializes in business strategy, organizational technology and the role of technology in business has this to say about Ethereum: "Ethereum

The most important advantage of ethereum over bitcoin is that this cryptocurrency technology allows the computer applications to run on its network, not just ether by itself. The significant appeal of bitcoin lies in the fact that it can't be controlled by any single party and it is not running via a central server. Ethereum improves on that by allowing not only the currency but other things as well to be run inside the network. Discover the secrets to trading cryptocurrency on
