The Alberta government is looking to the private sector - and in particular to private health insurance - to solve health care problems. However, private health insurance is mired in myth and misunderstanding. The Bottom Line summarizes a huge body of evidence to get to the truth: private health insurance is more expensive and actually reduces access to health care. Evidence reveals that a manufactured cost crisis is driving the push for more private health insurance. This book examines the implications of the recent Supreme Court Chaoulli decision in Quebec, and offers vignettes of life before medicare. The Bottom Line concludes that the Alberta Conservative government is needlessly pursuing a US-style health system. In this highly readable and well-researched book, Diana Gibson and Colleen Fuller get to the real story behind private health insurance and offer viable solutions for strengthening Canada's public health care system from within.

Medical errors are responsible for at least 195,000 unnecessary deaths each year and indiscriminate use of antibiotics has resulted in the creation of drug resistant-bacteria - we are in the "post-antibiotic era" for certain diseases. Yet hope remains. The baby boomers' distrust of authority and "experts" may once again serve them well. They are still healthy enough to have many years of quality life ahead of them, if they are proactive. Unfortunately, even educated laymen have little understanding of medical

treatment and often have no choice but to follow the physician's guidance. This book is written to fill that void. Its sole purpose is to focus on documented outcomes from medical therapy. Books explaining disease processes and treatments are commonplace. Usually the only real difference is the author is a famous physician or celebrity, or the author is promoting a trendy new "discovery." This book is written from a totally different perspective. About six years ago while working in the medical intensive care unit of a regional medical center, I became disillusioned because my patients continued to die or to have poor medical outcomes despite aggressive advanced medical care. My research training significantly influences my thought processes; I reasoned that if my patients were dying despite our efforts, then perhaps the care they were receiving was not really as "advanced" as we thought. I asked my chief physician if there were any books available discussing patient outcomes. "No," he said. "Insurance companies keep that information locked up." The information does exist, but it is scattered throughout the medical literature. Here, I have attempted to consolidate it into one source and simplify it as much as possible so that you can make truly informed decisions. Richard Stanzak is a critical care nurse. He also worked as a molecular biologist for fourteen years, seven of them for Eli Lilly pharmaceuticals in both research and development. As a traveling ICU nurse he has been employed at 19 different assignments. He has worked in major trauma units, transplant units, cardiac units and hospitals from 1150 beds to 8 beds. He has experienced first-hand the problems of healthcare and can certainly attest this is a national problem. Stanzak is the author and/or co-author of several papers and also has several patents. He is the lead author of a benchmark paper on the cloning of genes responsible for the production of erythromycin. He was engaged in research at Eli Lilly when Prozac was first discovered and Genentech first licensed the insulin gene to Lilly. As a critical care nurse, he is responsible for providing teaching to patients or families about drugs, diseases and procedures.

Triple Bottom Line Risk Management

Praise for Structured Finance & Insurance "More and more each year, the modern corporation must decide what risks to keep and what risks to shed to remain competitive

and to maximize its value for the capital employed. Culp explains the theory and practice of risk transfer through either balance sheet mechanism such as structured finance, derivative transactions, or insurance. Equity is expensive and risk transfer is expensive. As understanding grows, and, as a result, costs continue to fall, ART will continue to replace equity as the means to cushion knowable risks. This book enhances our understanding of ART." --Myron S. Scholes, Frank E. Buck Professor of Finance, Emeritus, Graduate School of Business, Stanford University "A must-read for everyone offering structured finance as a business, and arguably even more valuable to any one expected to pay for such service." --Norbert Johanning, Managing Director, DaimlerChrysler Financial Services "Culp's latest book provides a comprehensive account of the most important financing and risk management innovations in both insurance and capital markets. And it does so by fitting these innovative solutions and products into a single, unified theory of financial markets that integrates the once largely separated disciplines of insurance and risk management with the current theory and practice of corporate finance." --Don Chew, Editor, Journal of Applied Corporate Finance (a Morgan Stanley publication) "This exciting book is a comprehensive read on alternative insurance solutions available to corporations. It focuses on the real benefits, economical and practical, of alternatives such as captives, rent-a-captive, and mutuals. An excellent introduction to the very complex field of alternative risk transfer (ART)." --Paul Wohrmann, PhD, Head of the Center of Excellence ART and member of the Executive Management of Global Corporate in Europe, Zurich Financial Services "Structured Finance and Insurance transcends Silos to reach the Enterprise Mountaintop. Culp superbly details integrated, captive, multiple triggers and capital market products, and provides the architectural blueprints for enterprise risk innovation." --Paul Wagner, Director, Risk Management, AGL Resources Inc.
