*The young girl at the centre of this charming and quirkily-illustrated story hates brushing her teeth and is terrified of the dentist; as far as she's concerned, there's no scarier monster. But when she meets a real monster in her bathroom, she learns how dentists are really heroes and brushing your teeth is very important - so important that even monsters do it! This inventive picture book is brimming with humour and imagination. Parent and child will love to read along together over and over again.*

*The seriously, seriously funny roller-coaster ride of sex and violence that Aleksandar Hemon has long promised Script idea #142: Aliens undercover as cabbies abduct the fiancée of the main character, who has to find a way to a remote planet to save her. Title: Love Trek. Script idea #185: Teenager discovers his girlfriend's beloved grandfather was a guard in a Nazi death camp. The boy's grandparents are survivors, but he's tantalizingly close to achieving deflowerment, so when a Nazi hunter arrives in town in pursuit of Grandpa, he has to distract him long enough to get laid. A riotous Holocaust comedy. Title: The Righteous Love. Script idea #196: Rock star high out of his mind freaks out during a show, runs offstage, and is lost in streets crowded with his hallucinations. The teenage fan who finds him keeps the rock star for himself for the night. Mishaps and adventures follow. This one could be a musical: Singin' in the Brain. Josh Levin is an aspiring screenwriter teaching ESL classes in Chicago. His laptop is full of ideas, but the only one to really take root is Zombie Wars. When Josh comes home to discover his landlord, an unhinged army vet, rifling through his dirty laundry, he decides to move in with his girlfriend, Kimmy. It's domestic bliss for a moment, but Josh becomes entangled with a student, a Bosnian woman named Ana, whose husband is jealous and violent. Disaster ensues, and as Josh's choices move from silly to profoundly absurd, The Making of Zombie Wars takes on real consequence.*

The only way to know what will happen in future is to let it unfold.

Long before Oliver Sacks became a distinguished neurologist and bestselling writer, he was a small English boy fascinated by metals—also by chemical reactions (the louder and smellier the better), photography, squids and cuttlefish, H.G. Wells, and the periodic table. In this endlessly charming and eloquent memoir, the author of *The Man Who Mistook His Wife for a Hat* and *Awakenings* chronicles his love affair with science and the magnificently odd and sometimes harrowing childhood in which that love affair unfolded. In *Uncle Tungsten* we meet Sacks' extraordinary family, from his surgeon mother (who introduces the fourteen-year-old Oliver to the art of human dissection) and his father, a family doctor who imbues in his son an early enthusiasm for housecalls, to his "Uncle Tungsten," whose factory produces tungsten-filament lightbulbs. We follow the young Oliver as he is exiled at the age of six to a

grim, sadistic boarding school to escape the London Blitz, and later watch as he sets about passionately reliving the exploits of his chemical heroes—in his own home laboratory. Uncle Tungsten is a crystalline view of a brilliant young mind springing to life, a story of growing up which is by turns elegiac, comic, and wistful, full of the electrifying joy of discovery.

Witness the rise of New York City through dozens of historic and contemporary aerial photographs that chart the city's ever-changing skyline. From the ground, New York City can feel like a chaotic jumble of traffic, pedestrians, one-way streets, parks, and buildings of every shape and size. But above the city, away from the cacophony and the commotion, New York can be tranquil and awe-inspiring. The city that never sleeps also never stops changing, which is why this phenomenal collection of historic maps and aerial photos is a fascinating way to explore New York's evolution. The book opens with maps of 17th-century Manhattan, a quiet settlement with a ragged shoreline. A series of chronological illustrations show the city's northward expansion, the establishment of its grid system, and the creation of Central Park. The next three chapters include aerial photographs that chart the city's unbelievable expansion in every direction, including skyward. As buildings rise, as the shoreline expands with ports and landfills, and as more sophisticated photographic techniques allow for breathtaking views of New York's unmistakable skyline, this lush, oversized book captures a city that is truly alive. Author Peter Skinner's commentaries on the photographs and maps will guide readers through what is certain to become a treasured book for all who love New York."

With a Foreword writer Steven Weinberg In this richly illustrated book, Nobel Laureate Gerard 't Hooft and Theoretical Physicist Stefan Vandoren describe the enormous diversity of natural phenomena that take place at different time scales. In the tradition of the bestseller Powers of Ten, the authors zoom in and out in time, each step with a factor of ten. Starting from one second, time scales are enlarged until processes are reached that take much longer than the age of the universe. After the largest possible eternities, the reader is treated to the shortest and fastest phenomena known. Then the authors increase with powers of ten, until again the second is reached at the end of the book. At each time scale, interesting natural phenomena occur, spread over all scientific disciplines: orbital and rotation periods of planets and stars, decay times of elementary particles and atoms, biological rhythms and evolution processes, but also the different geological time scales. Keywords:Time;natural Phenomena;Time Scales;Age of the Universe;Powers of TenReviews: "The somewhat facetious narrating style and the abundance of illustrations are so inviting and rather addictive once you picked up the book." European Mathematical Society "Pleasingly accessible volume that will give pleasure to academics, students, connoisseurs of coffee-table books and even the people who compile questions for Trivial Pursuit ... Can be enjoyed as a

source of scientific stories and images, as an unusual perspective on history, as a popular account of modern physics, and so on. Underneath them all is a wealth of serious science that will give readers insights into abstract fundamental ideas via concrete realities ... Every science teacher would benefit from reading Time in Powers of Ten, but I hope it will have an even wider reach." Times Higher Education "The authors have compiled a refreshing mix of historical anecdotes and examples from music to sport and biology to astronomy to lighten up the heavier taste of particle physics and cosmology... It is both an enjoyable read and very pleasant to browse at leisure... It fully conveys the authors' amazement at – as Feynman put it – our fantastically marvellous universe." Nature Physics "The authors introduce the reader to the diversity of nature in a novel way by describing typical and interesting phenomena that occur or have occurred on many different time scales. The time scales considered differ by powers of ten, as the title of the book says, from the shortest times of which we have knowledge to the longest. I am sure many readers will enjoy the book as I have." Edward Witten, Fields Medalist "Time is an essential dimension of life. Indeed, its remarkable and awesome variation of scale shapes the natural world. This book by Gerard 't Hooft and Stefan Vandoren gives us an exposé of a wide range of natural phenomena and their associated time scales, spanning the very small, the very large, and the life events of our universe. The book is elegantly illustrated and should be an enjoyable read for anyone interested in a deeper understanding of the fourth dimension, time, and how it shapes our lives." Ahmed Zewail, Nobel Laureate in Chemistry "Like the original Powers of Ten, it is a wonderful book for flipping through and thinking about puzzles and is a good introduction to basics like how to tell a quark from a lepton." The Dispatch "The book reveals the extraordinary complexity of our universe – it is a fascinating journey." CERN Courier "This is a fascinating coffee-table book ranging from the unimaginably huge to the unimaginably tiny." Ultramicroscopy "You can read the book in any direction. Delving into the index takes you on a mystery tour of the time domain. Helpfully, all the major phenomena are gathered together on an illustrated time line. This book is definitely one for your reading list." Physics Education

In ?Margins of Excess? the notion of how personal imagination conflicts with generally accepted beliefs is expressed through the narratives of six individuals. Every one of them momentarily received nationwide attention in the US press because of their attempts to realize a dream or passion, but were presented as frauds or deceivers by the mass media's apparent incapacity to deal with idiosyncratic versions of reality.0The current era of ?post-truth?, in which truths, half-truths, lies, fiction or entertainment are easily interchanged, has produced a culture of ?hyper-individual truths?, demanding a new approach to identify the underlying narratives that structure our perception of reality in a world where there is no longer a generally accepted frame of realism. 0Embedding the stories of the six main protagonists into a clustering tale of cloned military dogs, religious apparitions, suspect vehicles, fake terrorist plots, accidental bombings and fictional presidents, this book follows an associative logic akin to the indiscriminate way a paranoid mind connects unrelated events, or the hysteria of the 24-second news cycle.

By definition, winning means that you competed and you came out ahead. Human nature requires us to compete in order to survive. Therefore, winning and survival have the element of success in common. To ascend to a winning position, you need a goal, a desire to achieve it, and the qualities of discipline, perseverance and action to attain it. Having your goal and setting yourself up to achieve your goal is the first step in the process. You adjust your mindset and begin to plan diligently. Goals may be as different as DNA, but methodologies have much in common. Furthermore, your plans and expectations will need adjustments as you go along. That is why the knowledge shared by the CelebrityExperts(r) in this book will be of importance to you. The advice and suggestions of these CelebrityExperts(r) are based on their experiences - both their accomplishments and their shipwrecks. The knowledge they share will allow you to make plans that can propel you in the right direction. That is the function of a mentor - to guide you where you are going and to advise what to avoid. If you wish to develop The Winning Way to your goals, read on... You will never win if you never begin. Helen Row
