Claire Laubier brings together documentary and statistical material; extracts from newspapers and journals, literary texts, advertisements, manifestos, and personal testimonies. Each extract relates to the different experiences of women in France at work, in politics, at home and in the family. Together they offer a direct and thought-provoking chronological and thematic account of women's lives in post-war France.

The 3-D Band Book is a three-dimensional approach to rehearsal preparation. This complete tune up/warm up program will reduce rehearsal stress and permit greater accomplishment with less effort. The overall preparedness that this book provides will make every rehearsal a more rewarding and enjoyable experience. The book is divided into three parts: tune up/warm up, key preparation, and rhythm preparation. In addition, there are three pages of harmony and ear training which will provide the basic knowledge necessary for relating to the exercises and chorales found in the book.

**Analyzing Health Data in R for SAS Users is aimed at helping health data analysts who use SAS accomplish some of the same tasks in R. It is targeted to public health students and professionals who have a background in biostatistics and SAS software, but are new to R. For professors, it is useful as a textbook for a descriptive or regression modeling class, as it uses a publicly-available dataset for examples, and provides exercises at the end of each chapter. For students and public health professionals, not only is it a gentle introduction to R, but it can serve as a guide to developing the results for a research report using R software. Features: Gives examples in both SAS and R Demonstrates descriptive statistics as well as linear and logistic regression Provides exercise questions and answers at the end of each chapter**

**Uses examples from the publicly available dataset, Behavioral Risk Factor Surveillance System (BRFSS) 2014 data Guides the reader on producing a health analysis that could be published as a research report Gives an example of hypothesis-driven data analysis Provides examples of plots with a color insert**

This book aims to provide a comprehensive examination of the field of molecular chaperone inhibition and its application to pharmaceutical research. With several small molecule inhibitors in oncology clinical development, there is clearly intense interest in the chaperones as a molecular target. Filling a significant gap in the market by providing a detailed comparison of discovery programs across the industry, this text will find broad interest among researchers in the field of molecular chaperone pharmaceutical research, oncology research, and medicinal chemistry. Arranged into three main sections the book covers structure and function, small molecule inhibitors and concludes with a section discussing clinical perspectives. With specific chapters covering the discovery of key molecules such as, BIIB028, STA-9090, Serenex Hsp90 inhibitor, NVP-AUY922 and NVP-HSP990, this comprehensive text is an essential treatise for researchers working in academia and industry.
