

Le Città E La Crisi Quattro Casi Di Globalizzazione Urbana

This book presents an analysis of the dialogue of literature and science that forms a central part of the work of Italo Calvino, one of Italy's best known contemporary authors. It provides an in-depth study of Calvino's interest in scientific models and methods and the ways these have informed his narratives.

Science, Technology and European Cultural Heritage is a collection of papers from the Proceedings of the European Symposium of the same title held in Bologna, Italy on June13-16, 1989. The papers discuss the critical issues related to the scientific and technical aspects of the protection and conservation of the cultural heritage of Europe. Participants of the symposium identify and describe the main research and development issues that are common to cultural heritage problems, and increase cooperation in these areas. Other papers examine the applicability of research and development through better matching with the real needs of conservators, restorers, policy makers, and the general public. The participants also discuss specific research and development directions for the future, including the provision of a scientific basis for European Community policies on environment and culture. One paper presents some of the scientific research done both in the field and laboratory of specific historical areas, monuments, indoor objects. As an example, archaeologists can use infrared thermal image analysis as an enhanced tool to detect buried archeological and historical sites. Another paper analyzes the chemical and physical properties of deteriorated stones in historical monuments in Castile-Leon. The collection can prove useful for archaeologists, historians, museum curators, and policy makers involved in national and cultural preservation.

This volume analyzes key dimensions of political representation and participation in Portugal, examining the impact of the economic crisis on the linkage between voters and elected representatives, contributing to assessing the significant changes that representative democracies have experienced and the factors that may boost their renewal.--José Ramón Montero, Universidad Autónoma de Madrid

Working in 1970s Italy, a group of artists—namely Ugo La Pietra, Maurizio Nannucci, Francesco Somaini, Mauro Staccioli, Franco Summa, and Franco Vaccari—sought new spaces to create and exhibit art. Looking beyond the gallery, they generated sculptural, conceptual, and participatory interventions, called Arte Ambientale (Environmental Art), situated in the city streets. The artists' fierce domestic terrorism aggravated an already fragile political situation. To confront the malaise, these artists embraced a position of artistic autonomy and social critique, democratically connecting the city's inhabitants through direct art practices.

Die 1970er-Jahre gelten in der deutschen Zeitgeschichte als Epoche eines tief greifenden sozialen Wandels, eines "Strukturbruchs " im Übergang von der Industriemoderne zur postfordistischen Gesellschaft. Die Beiträge dieses Bandes widmen sich diesem Jahrzehnt erstmals aus einer stadthistorischen Perspektive und stellen dabei Entwicklungen in Westdeutschland und im Ruhrgebiet bis Sizilien wird untersucht, wie sich die Umbrüche dieser Zeit im Brennpunkt von städtischem Raum und städtischer Gesellschaft verdichten, als "urbane Krise" wahrgenommen und verhandelt werden und sich in Konflikten in der städtischen Politik sowie Kämpfen in und um die Stadt manifestieren.

La Città Altra. Storia E Immagine Della Diversità Urbana: Luoghi E Paesaggi Dei Privilegi E Del Benessere, Dell'isolamento, Del Disagio, Della Multiculturalità. Ediz. Italiana E Inglese

Un secolo e mezzo prima che Occupy riempisse le strade e le piazze del mondo, la città moderna era già fucina di idee rivoluzionarie, e fu dallo spazio urbano che soffiarono i primi venti del cambiamento sociale e politico. Da sempre le città sono teatri che mettono in scena il pensiero utopico, ma anche centri di accumulazione capitalistica, e quindi spazi di conflitto contro quei pochi che, controllando l’accesso alle risorse comuni, determinano la qualità della vita di molti. L’urbanizzazione ha giocato un ruolo primario nell’assorbimento del surplus di capitale, alimentando processi di «distruzione creatrice» che hanno sottratto alle masse il diritto di costruire e ricostruire le proprie città. Questo conflitto latente è esploso periodicamente in grandi rivolte popolari, come nella Comune di Parigi del 1871, a seguito della riconfigurazione urbanistica voluta da Napoleone III e realizzata da Haussmann, quando i cittadini espropriati si sollevarono per imporre il governo rivoluzionario sulla capitale. O come nel 1968, con i grandi movimenti sociali urbani che agitarono Chicago e Berlino, Praga e Città del Messico, o ancora, nell’estate 2011, con i riots che hanno bruciato le periferie di Londra e con l’ondata di indignazione contro il potere finanziario che ha scosso America ed Europa. «Città ribelli», unendo rigore scientifico e passione politica, ripercorre la storia delle città come centri propulsori della lotta di classe e dei movimenti di riappropriazione dei diritti collettivi. Partendo dal saggio cruciale di Henri Lefebvre «Il diritto alla città», David Harvey esplora gli effetti delle politiche neoliberiste sulla vita urbana negli ultimi trent’anni; le modalità con cui la schiavitù del debito immobiliare ha paralizzato il ceto medio, le classi povere e le minoranze; il progressivo restringimento dello spazio pubblico per la cittadinanza a vantaggio delle cattedrali del business. Per approdare, infine, al quesito fondamentale: in che modo, in tempi di crisi, possiamo riorganizzare le città perché siano socialmente ed ecologicamente più giuste?

No detailed comparison of the city-state in medieval Europe has been undertaken over the last century. Research has concentrated on the role of city-states and their republican polities as harbingers of the modern state, or else on their artistic and cultural achievements, above all in Italy. Much less attention has been devoted to the cities’ territorial expansion: why, how, and with what consequences cities in the urban belt, stretching from central and northern Italy over the Alps to Switzerland, Germany, and the Low Countries, succeeded (or failed) in constructing sovereign polities, with or without dependent territories. Tom Scott goes beyond the customary focus on the leading Italian city-states to include, for the first time, detailed coverage of the Swiss city-states and the imperial cities of Germany. He criticizes current typologies of the city-state in Europe advanced by political and social scientists to suggest that the city-state was not a spent force in early modern Europe, but rather survived by transformation and adaption. He puts forward instead a typology which embraces both time and space by arguing for a regional framework for analysis which does not treat city-states in isolation, but within a wider geopolitical setting.

Schaum’s Outline of Italian Grammar, 4th Edition

Trinacria, the ancient name for Sicily extending back to Homeric Greek, has understandably been the focus of decades of archaeological research. Recognizing Sicily's rich prehistory and pivotal role in the history of the Mediterranean, Sebastiano Tusa - professor, head of heritage agencies and councillor for Cultural Heritage for the Sicilian Region - promoted the exploration of the island's heritage over decades of fostering research initiatives not only produced rich archaeological results spanning the Palaeolithic to the modern era but brought scholars from a range of schools and disciplines to work together in Sicily. Through his efforts, uniquely productive methodological, theoretical and interpretative networks were created. Their impact extends far beyond Sicily and Italy. To highlight these achievements, the Romanum Finlandiae, the Swedish Institute in Rome, the Norwegian Institute in Rome, the British School at Rome and the Assessorato dei Beni Culturali of Sicily, with generous support from the Swedish Riksbankens Jubileumsfond, assembled this anthology of papers. The aim is to present a selection of the work of and results from contemporary, multi-national research projects in Sicily. The collection of articles, written by leading international scholars, is presented in an interdisciplinary framework, has generated important results and perspectives. The articles in this volume present research projects from throughout the island. The core of the articles is concerned with the Archaic through to the Roman period, but diachronic studies also trace lines back to the Stone Age and up to the contemporary era. A range of methods and sources are used to explore the island's archaeological heritage and its role in the Mediterranean world.

This book addresses issues that waterfronts face in small Mediterranean port towns due to increases in the tourism industry. Integrating theory and pragmatic approaches, Waterfront Design in Small Port Towns proposes a design matrix which can go on to be implemented in waterfronts globally. The demand for a sustainable regeneration of the urban waterfront is constantly growing and represents a challenge to urban designers. The uniqueness of the region and to activate an overall redevelopment of small port towns. To understand these issues, Waterfront Design in Small Port Towns contains an in-depth investigation of the cultural and environmental assets and spatial socio-economic factors of the urban waterfront. This is conducted through the author's original methodological framework, the Waterfront Design Methodology, which addresses the idiosyncrasies of the archetypical waterfront. The methodological and theoretical approach developed in the book can be applied to different geographical locations and countries, presenting comparable characteristics. This book is an ideal read for professionals and students alike with an interest in urban design and planning.

perception and reaction of environmental change and natural extreme events on late Medieval societies. For humanists from all historical disciplines it offers an approach how to integrate written and even scientific evidence on environmental change in established and new fields of historical research. For scientists it demonstrates the contributions scholars from the humanities can provide for discussion on past environmental changes.
