"You can't have depths without surfaces," says Linda Grant in her lively and provocative new book, The Thoughtful Dresser, a thinking woman's guide to what we wear. For centuries, an interest in clothes has been dismissed as the trivial pursuit of vain, empty-headed women. Yet, clothes matter, whether you are interested in fashion or not, because how we choose to dress defines who we are. How we look and what we wear tells a story. Some stories are simple, like the teenager trying to fit in, or the woman turning fifty renouncing invisibility. Some are profound, like that of the immigrant who arrives in a new country and works to blend in by changing the way she dresses, or of the woman whose hat saved her life in Nazi Germany. The Thoughtful Dresser celebrates the pleasure of adornment and is an elegant meditation on our relationship with what we wear and the significance of clothes as the most intimate but also public expressions of our identity.

The Secrets of Sewing Lingerie

Since the first edition of Metric Pattern Cutting was published in 1975 to provide a straightforward introduction to flat pattern cutting, it has become the established textbook on the subject. The fourth edition continues to offer an introduction to the basic principles of pattern cutting, with a range of good basic blocks and examples of their application to garments. The original blocks and many of the pattern adaptations have therefore been retained. However, the great expansion of casual wear, cut in jersey or stretch fabrics, has led to the growth of 'flat cutting' with no darting to create the shape and this edition devotes a whole section to this type of cutting. The sections on computer-aided design and grading have been updated. The size charts of body measurements have been revised, reflecting the changing shape of women's bodies. This book explains the processes at work and the many unexpected influences that inform the choice of color, silhouettes, and decoration. The book documents the rise of the deluxe lingerie brand. Step-by-step illustrations demonstrate the basic slopers and show how to manipulate them into different styles. Advice is given about how to work with the speciality fabrics used in the industry including woven, knit, power stretch, and bias-cut fabrics. Specially commissioned photographs and diagrams are used to showcase construction techniques specific to lingerie including boning, elastic, and lace insertion, and how and where to use the myriad of closures available. This fourth edition of Metric Pattern Cutting for Children ' s Wear and Babywear remains the standard text book but has three majorimprovements. First, the sections have been re-organised to reflect changes in producing and marketing children ' s clothes. Today ' s popularity of easy-fitting styles and knitted fabrics means that basic ' flat ' pattern cutting is used to construct the majority of children ' s wear and babywear and this type of cutting is therefore emphasised in this new edition. Shaped blocks and garments, cut to fit the body form, are still included, and are placed in chapters covering some school uniform garments or more expensive fashion or formal clothes. The book now clearly separates the sections useful to student beginners (Parts One, Two and Three), and also offers more advanced or specialist sections for students who wish to pursue a career in children ' s wear or for designers working in the different manufacturing sectors of the trade. The second change in this fourth edition is the introduction of colour coding to the sections; this makes it easier to identify specific processes in the book and enhances the illustrations. Finally, the size charts have been revised to reflect the changes in body sizing. The clear division of the boys ' and girls ' measurements in the charts has been in response to the way clothes are marketed and to co-ordinate with European size charts. ' Plus ' charts for heavier children have also been added.

Fibre Science and Technology is one of six titles in a coherent and definitive series of volumes dedicated to advanced composite materials research, development and usage in the former Soviet Union. Much of the information presented has been classified until recently. Thus each volume provides a unique insight into hitherto unknown research and development data. This volume deals with the basic components of a composite material, namely the reinforcement and the encasing matrix material. Beginning with a specification of a range of reinforcing fibres (glass, carbon, organic, inorganic, ceramic), the book then considers in detail the development of such fibres and the significant range of properties achieved. An extensive test methodology used to evaluate the physical and mechanical properties of each type of fibre matrix combination is presented, and the production method employed for each constituent part is described. This book will be of interest to anyone involved in research or development in composite materials science and technology, both in industry and universities.
