

RARE HIGHS, KILLER LOWS: True Tales From The Track

This book weaves all of these factors together to engage in and promote medical, biomedical and psychosocial interventions, including lifestyle changes, for healthier aging outcomes. The text begins with an introduction to age-related changes that increase in disease and disability commonly associated with old age. Written by experts in healthy aging, the text approaches the principles of disease and disability prevention via specific health issues. Each chapter highlights the challenge of not just increasing life expectancy but also decreasing disease burden and disability in old age. The text then shifts into the whole-person implications for clinicians working with older patients, including the social and cultural considerations that are necessary for improved outcomes as Baby Boomers age and healthcare systems worldwide adjust. Healthy Aging is an important resource for those working with older patients, including geriatricians, family medicine physicians, nurses, gerontologists, students, public health administrators, and all other medical professionals.

The fifth edition of the only comprehensive text dealing exclusively with rare or infrequently encountered malignancies in adults and children is an essential resource for any clinical oncologist. Encompasses all the information needed to diagnose and manage uncommon cancers, an area where advice and guidance is typically scarce Fully revised with new material and an evidence-based, teach-by-example approach Provides insight on real-world decision making in the clinical setting Edited and authored by a highly experienced and senior team of medical oncologists, radiation oncologists, and other specialists, giving a balanced and complete overview Extensively illustrated in full color throughout, including heat maps to show gene expression

Humans have always been fascinated by marine life, from extremely small diatoms to the largest mammal that inhabits our planet, the blue whale. However, studying marine life in the ocean is an extremely difficult proposition because an ocean environment is not only vast but also opaque to most instruments and can be a hostile environment in which to perform experiments and research. The use of acoustics is one way to effectively study animal life in the ocean. Acoustic energy propagates in water more efficiently than almost any form of energy and can be utilized by animals for a variety of purposes and also by scientists interested in studying their behavior and natural history. However, underwater acoustics have traditionally been in the domain of physicists, engineers and mathematicians. Studying the natural history of animals is in the domain of biologists and physiologists. Understanding behavior of animals has traditionally involved psychologists and zoologists. In short, marine bioacoustics is and will continue to be a diverse discipline involving investigators from a variety of backgrounds, with very different knowledge and skill sets. The inherent interdisciplinary nature of marine bioacoustics presents a large challenge in writing a single text that would be meaningful to various investigators and students interested in this field. Yet we have embarked on this challenge to produce a volume that would be helpful to not only beginning investigators but to seasoned researchers. Ken Fisher is founder and CEO of Fisher Investments, an independent money management firm managing over \$35 billion (as of Dec. 31/09) for individuals and institutions. And, Fisher has written the monthly "Portfolio Strategy" column for Forbes magazine for the last twenty-five years—since 1984—making him, so far, the fourth longest-running columnist in the magazine's history. During this time, he's seen everything from the stock market crash of 1987 and the great bull markets of the 1980s and 1990s to the Tech bubble of 2000 and the global market meltdown of 2008. Now, with The Making of a Market Guru, you'll gain an insightful look at Fisher's prolific career over the years and discover the high-profile market calls he's made so far in these monthly columns. At times engaging and timely, at others revealing and informative, this book is a sweeping look at a recent and eventful slice of stock market history. You'll read about what's changed, but you'll be more amazed by what hasn't. And you'll see investing wisdom that still applies, now and for the foreseeable future, from a quarter-century of Fisher's concise and witty market wisdom. Preceding Fisher's columns for each year are a few pages of commentary—putting them in historic context, pointing out areas that are still salient, and others where Fisher's perspective has changed over the years—highlighting key points that deserve extra attention. Chapter by chapter, this book offers practical investment advice from a leading market voice, while: Looking at Fisher's market analysis over the years and providing an industry insider's view of major, and not-so-major, market events Examining how Fisher called three of the last four bear markets Showing that what many commonly think impacts markets doesn't—and some very surprising things that do impact markets that few are aware of. And much more The more things change, the more they stay the same—at least when it comes to investing. And seeing history through the eyes of a market guru can help improve your overall investment endeavors today. If you take the time to read this unique, historic compilation, you'll be taking your first steps to understanding how to become your own market guru.

Thoroughly revised and updated, the New Edition of this definitive text explains how to care for neonates using the very latest methods. It maintains a clinical focus while providing state-of-the-art diagnosis and treatment techniques. Written by more than 55 specialists who are actively involved in the care of sick newborns, it serves as an authoritative reference for practitioners, a valuable preparation tool for neonatal board exams, and a useful resource for the entire neonatal care team. Focuses on diagnosis and management, describing pertinent developmental physiology and the pathogenesis of neonatal problems. Includes over 500 crisp illustrations that clarify important concepts and techniques. Features the contributions of new editor Christine Gleason, a well-known neonatologist specializing in fetal physiology and drug/alcohol effects on the brain. Discusses hot topics such as ethical decisions in the neonatal-perinatal period * maternal medical disorders of fetal significance, seizure disorders, isoimmunization, cancer and mental disorders * maternal and fetal anesthesia and analgesia * prenatal genetic diagnosis * overview of clinical evaluation of metabolic disease * neonatal pain in the 21st Century * immunology of the fetus and newborn * wonders of surfactant * long-term neurological outcomes in children with congenital heart disease * developmental biology of the hematologic system * and illustrative forms and normal values: blood, CSF, urine. Features extensive cross-referencing, making it quick and easy to navigate through the organ-related sections. Includes coverage of perinatology-providing a well-rounded, comprehensive approach to patient care. Presents case studies designed to help readers recognize and manage cases in the office setting and assess their understanding of the topic.

This textbook of obstetrics and gynaecology includes coverage of menstrual disorders, fertilisation, ectopic pregnancy, multiple pregnancy, foetal growth, labour, contraception, infertility, menopause, ovarian diseases, tumours of the uterus.

This lavishly illustrated compendium of all things hashish appeals to illicit substance consumers, medical users, and history buffs alike. Clarke traces hashish origins, his consumption, production and chemistry, from earliest times to the present. Traditional methods of collecting cannabis resin and processing it into hashish are described. Includes bibliographical references and index.

A comprehensive, easy-to-use guide to the foods that curb memory loss and improve cognitive longevity, this book will forever change how you think about diet and though people around the world are living longer than ever, but record numbers of us are experiencing cognitive decline and other brain disorders later in life. But the news: We now have the knowledge to extend both lifespan and mindspan, helping to ensure that our minds and bodies stay in peak form at any age. Studying the diet of populations that live longest with low levels of dementia, as well as the ways that certain food additives and ingredients interact with our genes, Dr. Preston Estep shows about which foods are (and are not) beneficial to our brains, with simple changes you can make today to slow cognitive decline. Startling in its revelations about health for those over the age of fortyThe Mindspan Diet challenges us to rethink our approach to many common staples, including:

- Iron: While iron-fortified foods sound healthy, iron intake can be toxic, especially for people over forty, and increases the risk of type 2 diabetes, Alzheimer's, and Parkinson's disease.
- Whole grains: Processed grains such as white rice, pasta, and flour are actually staples in the diets of cultures with the best cognitive health.
- Protein: Though it's considered by some to be a miracle macro, high levels of protein are actually hard on the kidneys, and may promote cancer and accelerate the progression of dementia.

Complete with food recommendations, shopping lists, advice on reading nutrition labels, and more than seventy delicious recipes, The Mindspan Diet shows that you can enjoy the richest flavors life has to offer and stay healthy, and cognitively intact for a very long life. Praise for The Mindspan Diet "Eye-opening . . . fascinating, important . . . Estep includes plenty of practical info on improving one's mindspan and puts some refined grains back on the table."—Publishers Weekly (starred review) "Presenting a sensible regimen that people can follow easily, this recommended diet book [has] useful information about aging."—Library Journal

Why do we think about and interact with other people in the particular ways that we do? Might these thoughts and actions be contemporary products of our long-a

past? If so, how might this be, and what are the implications? Research generated by an evolutionary approach to social psychology issues profound insights into self-impression formation, prejudice, group dynamics, helping, aggression, social influence, culture, and every other topic that is fundamental to social psychology. Evolution and Social Psychology is the first book to review and discuss this broad range of social psychological phenomena from an evolutionary perspective. It does so with a critical and constructive eye. Readers will emerge with a clear sense of the intellectual challenges, as well as the scientific benefits, of an evolutionarily-informed social psychology. World-renowned contributors identify new questions, new theories, and new hypotheses—many of which are only now beginning to be tested. Thus, this book not only reviews the current status of the field, it also sets an agenda for the next generation of research on evolution and social psychology. Evolution and Social Psychology is essential reading for evolutionary psychologists and social psychologists alike.

Easy to understand and fun to read, this engaging primer on the etiology and pathogenesis of human disease will help you develop a basic understanding of pathology and set you on the path to a successful career in the health professions. Punctuated by humor, unique case studies that link pathology to real-world clinical applications, and absorbing tales from the history of medicine, this engaging book focuses on the patient as it guides you through the causes and consequences of common diseases.

Cult Epics

This book is a compilation of high-yield, at-a-glance summaries for various topics on which pathologists frequently need information in a quick reference format while at the microscope (or when cramming for the boards). The authors are early-career pathologists who have compiled this book from the perspective of pathologists-in-training. The focus is not organ-based histologic criteria, but rather everything else that goes into pathologic diagnoses but is difficult to keep committed to memory. The emphasis is on immunohistochemistry, special stains, grading systems, molecular markers, tumor syndromes, and helpful clinical references. The book has a unique format in that the information is presented primarily in tables and diagrams accompanied by minimal explanatory text. It is intended to serve as a 'peripheral brain' for pathology residents and also practicing pathologists, where frequently needed information is readily accessible and easy to navigate.

Celebrating the 25th anniversary of Cult Epics - the controversial arthouse, horror and erotica video label - this commemorative hardcover book covers essential releases from filmmakers such as Tinto Brass, Fernando Arrabal, Radley Metzger, Walerian Borowczyk, Jean Genet, Abel Ferrara, George Barry, Rene Daalder, Agusti Villaronga, Jorg Buttgereit, Gerald Kargl, Nico B, Irving Klaw, and pinup legend Bettie Page. Includes in-depth reviews of films, interviews, and essays on directors by film critics Nathaniel Thompson, Mark R. Hasan, Michael den Boer, Ian Jane, Stephen Thrower, Marcus Stiglegger, Heather Drain and others - fully illustrated in color with rare photos, poster art, and memorabilia.

Body snatchers and grave robbers were the stuff of Victorian lore, but two real-life culprits took the crimes out of shadowy cemeteries and into criminal court. William Burke and William Hare aided Scottish surgeons competing for anatomical breakthroughs by experimenting on human corpses. As the duo evolved from petty theft to premeditated murder, they unwittingly brought attention to the medical practices of the era, leading to Burke's death by hanging. This account not only explores the work of the resurrectionists, it reflects the nature of serial killers, 1820s criminal law, and Edinburgh's early role as a seat of European medical research. Readers interested in the legal aspects of these crimes will find the trial testimony included to be a valuable resource.

Pavarotti. Domingo. Carreras. The Three Tenors have become an international sensation, captivating audiences and truly popularizing opera. This unique, fully illustrated volume presents the stories of the individual tenors and the magical concert that was to change the face of classical music forever. Entertaining, packed with information, and lavishly presented, it is a must-have for fans who want to continue to experience the magic of The Three Tenors phenomenon.

The Oxford Textbook of Medicine provides all that any doctor needs to know to practice top-level internal medicine. It gives comprehensive coverage of the epidemiology, aetiology, and mechanism of disease, as well as clear, unambiguous coverage of the diagnosis, practical management and prevention of the entire spectrum of medical disorders. There are major introductory sections on the scientific basis of disease; and in the system-based clinical sections genetic predisposition, pathophysiology, pathogenesis, molecular mechanisms, and cell biology are covered in depth for all significant medical syndromes. Clinical descriptions of diseases are clearly and memorably written, based on the experience and insight of the authors--many of whom are among the world's most distinguished medical scientists. Chapters are not only

"evidence based" but also on clinical experience and a thorough survey of all the relevant literature. Throughout, the approach of OTM is humane and ethical and, at the same time, factual, reliable, honest (especially where knowledge is limited) and rigorously scientific. This is not just a textbook of "First World" medicine. It provides practical guidance for doctors working in a variety of medical settings the value of a logical clinical approach rather than immediate resort to expensive imaging and laboratory tests. Moore of the contributing authors than ever before are from outside Europe, including strong representation of North American medicine. The new editorial team has ensured that the OTM continues to reflect rapid changes in medical practice: there are new sections on intensive care, alcohol and drug abuse, clinical pharmacology and therapeutics, world health, clinical trials and evidence-based medicine, adolescent medicine, sports medicine, and emergency medicine; more than half the contributors are new for this edition; and most of the text has been heavily revised. The striking new page and cover design reflect the significant changes made in this new edition. The Textbook is illustrated by over 2000 two-color diagrams and many color Plates. The index is the most detailed and user-friendly of any major medical textbook: in an emergency, the reader can access information quickly- whether on the ward, in office or at home. Like its predecessors, OTM4 will be the trusted and ultimate reference in libraries, hospitals, doctors' consulting rooms, solicitors' offices, press offices, and primary care practices worldwide.

"Most hematologists need a revised and practical textbook in which they can rapidly search on the morning of a consultation... This book will be an important resource in such situations." New England Journal of Medicine A well established and respected review of hematology Postgraduate Haematology is a practical, readable text which will give trainees, residents and practising hematologists up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders. Postgraduate Haematology is ideal for: Trainees and residents in hematology Hematologists in practice Why Buy This Book? A well established and respected review of hematology Practical and readable text Essential information for everyday use as well as the scientific background Up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders Complete revision of all chapters and the addition of new chapters to reflect latest advances in the speciality This is a full-length study of Chinese crime fiction in all eras: ancient, modern, and contemporary. It is also the first book to apply legal scholars law and literature inquiry to the rich field of Chinese legal and literary culture.

This new edition of the only guide to detail all the known routes on 570 peaks in the Sierra is completely reorganized to be even more user friendly and includes more than 100 new routes, route variations and winter ascents. The most popular guidebook to the magnificent Sierra mountains has been expanded and improved. There is 30 percent new content in this edition, including new route descriptions, additional peaks described, more historical information, and GPS-enabled driving directions. The content has also been completely rearranged to keep roads and trails, and passes and peaks together, making the book easier to use. Four of the 30 maps have been revised. "The Sierra climbing bible" (The Los Angeles Times) "The best field guide to the region." (Men's Journal) "The guide to the Sierra Nevada high country." (Climbing magazine)

"A complete and detailed guide to crime on film: prison dramas, film noir, heist movies, juvenile delinquents, serial killers, bank robbers, and many other subgenres and motifs. The historical and social background to movie crime is covered by articles on the FBI, the Mafia, the Japanese yakuza, prohibition, boxing, union rackets, drugs, poisoning, prostitution, and many other topics."--Cover.

Considered one of the finest performers in world cinema, Japanese actor Takashi Shimura (1905–1982) appeared in more than 300 stage, film and television roles during his five-decade career. He is best known for his frequent collaborations with Akira Kurosawa, including major roles in the landmark classics *Rashômon* (1950), *Ikiru* (1952) and *Seven Samurai* (1954), and for his memorable characterizations in *Ishirô Honda's* *Godzilla* (1954) and several *Kaijû* sequels. This is the first complete English-language account of Shimura's work. In addition to historical and critical coverage of Shimura's life and career, it includes an extensive filmography.

In the near future, a machinist, a monk, and a mesmerizer are looking for the Source of the universe, but among the ancient scriptures, they only find the devil ... Few humans in the future find the secrets of what words and sounds can do, for the Apocalypse and war have led them to evolve in mind and physique. Two of them end World War III with just a four-minute speech. Some say they did mass hypnosis. Others say it was their voice and will. Fifty years later in South Asia, KUSHA, a twenty-three-year-old machine-geek with social awkwardness and amnesia, tries to get the Devil's Book with secrets of voice. But her idol of voice and everyone's beloved war heroes, YUAN and RUEM, are also after it for power. In a society that worships the evolved High Grades with voice, how you speak and which words you talk with is important. As someone who finds all solutions in books, Kusha thinks the secrets in the three-foot-long ancient book will teach her to speak mesmerizingly. She believes it will help her evolve. So, she decides to attend the auction where the book will be sold. But there's a problem; powerful High Grades want the book too. They want to code fate, rewriting the material world. They are undead, immortal mesmerizers. And being a philosopher, Kusha admires their ethics while she must fight them—the fight that starts with the book. The fight creates a chain reaction leading her to an epic journey. About the Series: THE HIGH AUCTION: WISDOM REVOLUTION is a book of genre-bending Adult Sci-fi-Fantasy series "The Machinist, The Monk, And The Mesmerizer Chronicles." Here, you'll find Metaphysical magic built around philosophy and spirituality. You'll find ancient mysteries, archaeological adventures, and, most importantly, you will meet some characters. Its inspiration was from myths/truth (read the word you prefer) of all religions where humans evolved to

Sufis, Rishis, Sannashis, Monks, and sometimes, Gods. Example: Shiva Purana in Hindu epics where Sati evolved to Goddess Parvati and splits into Kali to destroy the evil is a prominent example. You'll find diverse cultures, sexuality, and faith in this series. Enjoy. What the Critiques and Reviewers are saying about it: "GEM PROSE ... YOU WILL FINISH THIS BOOK ONCE YOU START ..." "EXCEPTIONALLY THOUGHT-PROVOKING ..." "RELATABLE ... YOU KEEP NODDING AT EVERYTHING ..."

Arguing About Science is an outstanding, engaging introduction to the essential topics in philosophy of science, edited by two leading experts in the field. This exciting anthology contains a selection of classic and contemporary readings that examine a broad range of issues, from classic problems such as scientific reasoning; causal realism, to more recent topics such as science and race; forensic science; and the scientific status of medicine. The editors bring together some of the most influential philosophers in the field, including John Stuart Mill and Karl Popper, as well as more recent extracts from philosophers and scientists such as Ian Hacking, Stephen Jay Fraassen, Nancy Cartwright, and John Worrall. The anthology is organised into nine clear sections: science, non science and pseudo-science race, gender and science scientific explanation laws and causation science and medicine probability and forensic science risk, uncertainty and science policy scientific realism and anti-realism. clear, interesting, and free from unnecessary jargon. The editors provide lucid introductions to each section in which they provide an overview of the debate, as well as reading.

The most respected and authoritative human sexuality college textbook available, Crooks/Baur/Widman's OUR SEXUALITY, 14th Edition has been meticulously revised and updated with the latest research findings and psychosocial developments. It also is the first college text to deliver cutting-edge and in-depth emphasis on the impact of politics on nonjudgmental, the text covers our sexuality in an accessible, straightforward manner as it explores the similarities of sexual and relationship matters across cross cultural sexual orientation lines. With a focus on strengthening readers' self-awareness and sexual intelligence, the text is packed with exciting new research, personally relevant practical information on sexual health. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. This volume brings together an international group of clinicians and clinical scientists to contribute to a state-of-the-art review of the underlying pathogenic mechanisms, assessment, classification and diagnosis of renal disease, combined with a detailed overview of treatment strategies. An essential reference source for all those involved with patients with renal involvement in systemic autoimmune disease, and for those contributing to research into the underlying pathogenic mechanisms in these disorders. Since its first publication more than 35 years ago, MacSween's Pathology of the Liver, by Drs. Alastair D. Burt, Linda D. Ferrell, and Stefan G. Hübscher, has established itself as a definitive reference on liver pathology. The 7th Edition continues the tradition of excellence with more than 1,000 high-quality illustrations, coverage of the new and emerging applications and techniques that pathologists must be familiar with, an up-to-date review of drug-induced injury, and much more. A must-have for every surgical pathologist, it remains the most authoritative and comprehensive book in its field. Provides comprehensive, state-of-the-art coverage of all malignant and benign hepatobiliary disorders, an international "who's who" in the field. Helps you quickly recognize the wide variety of liver appearances that result from infections, tumors, and tumor-like lesions, as well as those caused by drugs and toxins. Features 1,000+ full-color illustrations that provide a complete visual guide to each tumor or tumor-like lesion and assist in the recognition of the tissue sample you're likely to encounter. Incorporates relevant data from ancillary techniques (immunohistochemistry, cytogenetics, and molecular genetics), giving you the tools to master the latest breakthroughs in diagnostic technology. Includes an updated chapter on mechanisms of liver disease, including coverage of regression and remodeling, and information on next generation sequencing; an up-to-date review of drug-induced injury, including the effects of herbal and alternative medicines.

From Toxic to Not Sick

Turn off the Fat-Makers, Turn on the Fat-Burners for Longevity, Energy, Weight Loss, Freedom from Disease

An inspiring story of fatty to fit and the power of the mind. Aged 30, Ben had a routine medical and was told he wouldn't see 40 unless he changed his lifestyle. An overweight, sedentary smoker, Ben had a young family and busy career with little time for anything else. 10 years later having completed many of the world's toughest ultra marathons including the Western States 100, the Ultra Trail of Mont Blanc and the Marathon Des Sables, he was hit with life-changing news when one of his daughters was diagnosed with Type 1 Diabetes. Ben decided to undertake

his toughest challenge yet: to prove to her that anything was possible. One evening, departing from the bright lights of Monte Carlo he headed towards the mountainous terrain behind the Cote d'Azur to run an unsupported 100km / 62.5 miles trail run. For most hardened ultra-marathon runners this would be a feat in itself, but for Ben he had something to prove: choosing to descend the rugged terrain he had already climbed and run the Cro Trail - a 130k / 81 mile mountain trail ultra race. A thrilling and yet down to earth account, detailing a young, working family man's journey to fitness - his love of nature and travel evolves - these stories can only inspire and motivate any reader.

The definitive guide to the characters of the DC Multiverse and a vital addition to every comic book fan's bookshelf. "It's as if we are all on a big, chemical drunk, and the hangover is a killer." —Suzanne Somers, in TOX-SICK Pioneering health and wellness advocate, Suzanne Somers, delivers a powerful answer in this expose on the immediate and long-term dangers of living in a world that has become increasingly toxic to our health. The build-up of toxins in our bodies can lead to myriad health concerns — including weight gain, food allergies, brain disorders, cancer, among many others. Moved to investigate by her own family's plight, Suzanne sits down with environmental doctors and specialists who share eye-opening information and practical advice for how to survive, thrive, and stay healthy today. In Tox-Sick you'll learn how to effectively detox all your body's systems and the different survival skills that can save your life, from top experts in the field, including: • Dr. Sherry Rogers, an environmental doctor for over 40 years, shares the truth about detoxification—and where you will likely be if you don't take it seriously. • Dr. Nicholas Gonzales shares where cancer comes from and how to manage it by detoxifying the liver and supplementing with enzymes. • Dr. Ritchie Shoemaker alerts you to mold toxicity, the newest threat to your brain and wellbeing...and just what to do to fight for your health. • Dr. Walter Crinnion teaches what everyday objects to avoid and the simple diet and lifestyle shifts to clean up your health and home in mere weeks! • Dr. Stephen Sinatra, America's leading integrative cardiologist, explains that we have been approaching heart disease all wrong: a healthy gut, detoxed body, and quality fats are each crucial and cardioprotective. • Dr. Gary Gordon shares new protocols for removing toxic lead from the body, as well as ways to keep the most important gland in your body, the thyroid, clean and healthy. From diet and supplement advice to coconut oil cleanses, everything you need to live clean and enjoy great health is in your hands.

"Part review, part testament to extraordinary dedication, and part call to get involved, Cetacean Societies highlights the achievements of behavioral ecologists inspired by the challenges of cetaceans and committed to the exploration of a new world."—from the preface by Richard Wrangham Long-lived, slow to reproduce, and often hidden beneath the water's surface, whales and dolphins (cetaceans) have remained elusive subjects for scientific study even though they have fascinated humans for centuries. Until recently, much of what we knew about cetaceans came from commercial sources such as whalers and trainers for dolphin acts. Innovative research methods and persistent efforts, however, have begun to penetrate the depths to reveal tantalizing glimpses of the lives of these mammals in their natural habitats. Cetacean Societies presents the first comprehensive synthesis and review of these new studies. Groups of chapters focus on the history of cetacean behavioral research and methodology; state-of-the-art reviews of information on four of the most-studied species: bottlenose dolphins, killer whales, sperm whales, and humpback whales; and summaries of major topics, including group living, male and female reproductive strategies, communication, and conservation drawn from comparative research on a wide range of species. Written by some of the world's leading cetacean scientists, this landmark volume will benefit not just students of cetology but also researchers in other areas of behavioral and conservation ecology as well as anyone with a serious interest in the world of whales and dolphins. Contributors are Robin Baird, Phillip Clapham, Jenny Christal, Richard Connor, Janet Mann, Andrew Read, Randall Reeves, Amy Samuels, Peter Tyack, Linda Weilgart, Hal Whitehead, Randall S. Wells, and Richard Wrangham.
