

Ragdoll Cats 2018 12 X 12 Inch Monthly Square Wall Calendar, Animals Cats (Multilingual Edition)

Cats have been domesticated since prehistoric times, perhaps for as long as 5,000 years. Throughout human history, they have been greatly valued as destroyers of vermin, as well as for their ornamental qualities. The domestic cat is related to lions, tigers, pumas and other wild cats and the similarity in looks and behaviour is immediately apparent. The Ultimate Guide to Cat Breeds has a lot of rich information about the most well known cat breeds in the world, such as Persian, Maine Coon, Siamese, Abyssinian, Russian Blue, Tonkinese, and Burmese. Cats, both wild and domestic, are presented in this beautiful full-color book featuring hundreds of facts about your favorite felines. It was probably the Ancient Egyptians, 5,000 years ago, who first recognized the value of cats - encouraging the animals into their homes and grain stores to keep rats and mice at bay. It did not take long for the rest of mankind to fall for the charms of the cat, and cats have been part of our lives almost continuously ever since. In addition to being quiet, clean and efficient hunters of vermin, cats have proved to be playful, intelligent and affectionate companions, too. The Ultimate Guide to Cat Breeds describes the origins and characteristics of the cat, its evolution from wild animal to perfect pet, and at the same time places it in its historical and cultural contexts. The book then goes on to provide valuable advice and guidance about all aspects of cat ownership and care, including choosing a cat and keeping it healthy. All major breeds recognized by the international cat fancies are featured, with information on temperament and special grooming requirements to help the would-be owner choose the ideal cat companion. The book is illustrated with over 400 color photographs.

Lara Caphart has returned to her hometown of Whisker Jog, New Hampshire after sixteen years to reconnect with her estranged Aunt Fran, who's having some difficulty looking after herself-- and her eleven cats. Lara swears one of the cats, a blue-eyed ragdoll, is the reincarnation of her beloved childhood pet, Blue. Fran is being harassed by Theo Barnes, a wealthy builder who has his sights set on Fran's property. When Lara stumbles on his body in Fran's yard, Lara finds herself following the cat's clues in search of a killer. Is Blue's ghost really trying to help her solve a murder, or has Lara inhaled too much catnip?

A lavishly illustrated look at how evolution plays out in selective breeding *Unnatural Selection* is a stunningly illustrated book about selective breeding--the ongoing transformation of animals at the hand of man. More important, it's a book about selective breeding on a far, far grander scale—a scale that encompasses all life on Earth. We'd call it evolution. A unique fusion of art, science, and history, this book celebrates the 150th anniversary of Charles Darwin's monumental work *The Variation of Animals and Plants under Domestication*, and is intended as a tribute to what Darwin might have achieved had he possessed that elusive missing piece to the evolutionary puzzle—the knowledge of how individual traits are passed from one generation to the next. With the benefit of a century and a half of hindsight, Katrina van Grouw explains evolution by building on the analogy that Darwin himself used—comparing the selective breeding process with natural selection in the wild, and, like Darwin, featuring a multitude of fascinating examples. This is more than just a book about pets and livestock, however. The revelation of *Unnatural Selection* is that identical traits can occur in all animals, wild and domesticated, and both are governed by the same evolutionary principles. As van Grouw shows, animals are plastic things, constantly changing. In wild animals the changes are usually too slow to see—species appear to stay the same. When it comes to domesticated animals, however, change happens fast, making them the perfect model of evolution in action. Suitable for the lay reader and student, as well as the more seasoned biologist, and featuring more than four hundred breathtaking illustrations of living animals, skeletons, and historical specimens, *Unnatural Selection* will be enjoyed by anyone with an interest in natural history and the history of evolutionary thinking.

What do a cozy mystery star, an award-winning blogger and a library supervisor have in common? They are all cats...once homeless cast-offs that were living on the streets or in the wild. Cats that were abused. But at some point, fate stepped in and changed the lives of these three cats and nine others. *Rescued: The Stories of 12 Cats, Through Their Eyes* contains the true-life stories of these cats, told through the feline's own point of view. Cats have been popular household pets for thousands of years, and their numbers only continue to rise. Today there are three cats for every dog on the planet, and yet cats remain more mysterious, even to their most adoring owners. Unlike dogs, cats evolved as solitary hunters, and, while many have learned to live alongside humans and even feel affection for us, they still don't quite "get us" the way dogs do, and perhaps they never will. But cats have rich emotional lives that we need to respect and understand if they are to thrive in our company. In Cat Sense, renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before, using cutting-edge scientific research to dispel the myths and explain the true nature of our feline friends. Tracing the cat's evolution from lone predator to domesticated companion, Bradshaw shows that although cats and humans have been living together for at least eight thousand years, cats remain independent, predatory, and wary of contact with their own kind, qualities that often clash with our modern lifestyles. Cats still have three out of four paws firmly planted in the wild, and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10,000 years ago. Cats are astonishingly flexible, and given the right environment they can adapt to a life of domesticity with their owners—but to continue do so, they will increasingly need our help. If we're to live in harmony with our cats, Bradshaw explains, we first need to understand their inherited quirks: understanding their body language, keeping their environments—however small—sufficiently interesting, and becoming more proactive in managing both their natural hunting instincts and their relationships with other cats. A must-read for any cat lover, Cat Sense offers humane, penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets' lives—and ours.

Still under psychological evaluation, Fawkes returns to the force eager for a big case. When his former partner and friend, Detective Emily Baxter, calls him to a crime scene, he's sure this is it: the body is made of the dismembered parts of six victims, sewn together like a puppet—a corpse that becomes known as “The Ragdoll.” Fawkes is tasked with identifying the six victims, but that gets dicey when his reporter ex-wife anonymously receives photographs from the crime scene, along with a list of six names, and the dates on which the Ragdoll Killer plans to murder them. The final name on the list is Fawkes. Baxter and her trainee partner, Alex Edmunds, hone in on figuring out what links the victims together before the killer strikes again. But for Fawkes, seeing his name on the list sparks a dark memory, and he fears that the catalyst for these killings has more to do with him—and his past—than anyone realizes. With a breakneck pace, a twisty plot, and a wicked sense of humor, Ragdoll announces the arrival of the hottest new brand in crime fiction.
