How Wikipedia collaboration addresses the challenges of openness, consensus, and leadership in a historical pursuit for a universal encyclopedia. Wikipedia, the online encyclopedia, is built by a community—a community of Wikipedians who are expected to “assume good faith” when interacting with one another. In Good Faith Collaboration, Joseph Reagle examines this unique collaborative culture. Wikipedia, says Reagle, is not the first effort to

create a freely shared, universal encyclopedia; its early twentieth-century ancestors include Paul Otlet's Universal Repository and H. G. Wells's proposal for a World Brain. Both these projects, like Wikipedia, were fuelled by new technology—which at the time included index cards and microfilm. What distinguishes Wikipedia from these and other more recent ventures is Wikipedia's good-faith collaborative culture, as seen not only in the writing and editing of articles but also in their discussion pages and edit histories. Keeping an open perspective on both

knowledge claims and other contributors, Reagle argues, creates an extraordinary collaborative potential. Wikipedia's style of collaborative production has been imitated, analyzed, and satirized. Despite the social unease over its implications for individual autonomy, institutional authority, and the character (and quality) of cultural products, Wikipedia's good-faith collaborative culture has brought us closer than ever to a realization of the century-old pursuit of a universal encyclopedia. Math Without Numbers is a vivid, conversational, and wholly original guide to the three main branches of abstract math—topology, analysis, and algebra—which turn out to be surprisingly easy to grasp. This book upends the conventional approach to math, inviting you to think creatively about shape and dimension, the infinite and infinitesimal, symmetries, proofs, and how these concepts all fit together. What awaits readers is a freewheeling tour of the inimitable joys and unsolved mysteries of this curiously powerful subject. Like the

Media events have been described as broadcasts that involve an engaged audience viewing the same event simultaneously; though this definition is still relevant, the way media outlets interact with and react to their audiences has greatly changed. This is in part due to the emergence of social media platforms which allow a participatory audience, something that genre-specific

television channels now rely on.

Because these genre-specific, 24-hour channels seek to hook viewers with hyperbolic presentation and the illusion of large media events, the original definition must be adapted.

Global Perspectives on Media Events in Contemporary Society seeks to re-define the role of the media in relaying information about current events within a modern context. Determining what constitutes as and the proper presentation of a media event is of great importance given the ubiquity of media consumption. This book approaches the topic from

historical, ceremonial, and globally cultural perspectives while addressing news, sports, and other significant current events. It is a vital resource for students and teachers of communication, media, and journalism, professionals in the media industry, policy makers, and sociologists.

The authors deal not only with finding and using scientific evidence, but also with implementation and evaluation of interventions that generate new evidence on effectiveness. Each chapter covers the basic issues and provides multiple examples to illustrate important concepts.

The first phase can largely be credited with the creation and codification of contemporary stardom, while the second is linked to the spread of television, which weakened the Hollywood stardom model and gradually transformed the figure of the star, making it more intimate and familiar. In the last of these phases, we have many ' outsiders ' (personalities from a variety of professional domains

Drawing on dozens of semiotic, ethnographic and cross-cultural studies of mass media, it offers new insights into the analysis of media texts, offers models for the ethnographic study of media production and consumption, and suggests approaches for understanding media in the modern world system. Placing the anthropological study of mass

In the months leading up to his death, Bruce Lee was working on this definitive study of the Chinese martial arts—collectively known as Kung Fu or Gung Fu. This book has now been edited and is published here for the first time in its entirety. Bruce Lee totally revolutionized the practice of martial arts and brought them into the modern world—by promoting the idea that students have the right to pick and choose

those techniques and training regimens which suit their own personal needs and fighting styles. He developed a new style of his own called Jeet Kune Do—combining many elements from different masters and different traditions. This was considered heretical at the time within martial arts circles, where one was expected to study with only a single master—and Lee was the first martial artist to attempt this. Today he is revered as the "father" of martial arts practice around the world—including Mixed Martial Arts. In addition to presenting the fundamental techniques, mindset and training methods of traditional Chinese martial arts, this martial art

research project entitled The Onlife Initiative: concept reengineering for rethinking societal concerns in the digital transition. This volume collects the work of the Onlife Initiative. It explores how the development and widespread use of ICTs have a radical impact on the human condition. ICTs are not mere tools but rather social forces that are increasingly affecting our self-conception (who we are), our mutual interactions (how we socialise); our conception

of reality (our metaphysics); and our interactions with reality (our agency). In each case, ICTs have a huge ethical, legal, and political significance, yet one with which we have begun to come to terms only recently. The impact exercised by ICTs is due to at least four major transformations: the blurring of the distinction between reality and virtuality; the blurring of the distinction between human, machine and nature; the reversal from information

scarcity to information abundance; and the shift from the primacy of stand-alone things, properties, and binary relations, to the primacy of interactions, processes and networks. Such transformations are testing the foundations of our conceptual frameworks. Our current conceptual toolbox is no longer fitted to address new ICT-related challenges. This is not only a problem in itself. It is also a risk, because the lack of a clear understanding of our present time may easily

lead to negative projections about the future. The goal of The Manifesto, and of the whole book that contextualises, is therefore that of contributing to the update of our philosophy. It is a constructive goal. The book is meant to be a positive contribution to rethinking the philosophy on which policies are built in a hyperconnected world, so that we may have a better chance of understanding our ICT-related problems and solving them

satisfactorily. The Manifesto launches an open debate on the impacts of ICTs on public spaces, politics and societal expectations toward policymaking in the Digital Agenda for Europe's remit. More broadly, it helps start a reflection on the way in which a hyperconnected world calls for rethinking the referential frameworks on which policies are built.

How the creative abundance of today's media culture was made possible by the

decline of elitism in the arts and the rise of digital media. Media culture today encompasses a universe of forms—websites, video games, blogs, books, films, television and radio programs, magazines, and more—and a multitude of practices that include making, remixing, sharing, and critiquing. This multiplicity is so vast that it cannot be comprehended as a whole. In this book, Jay David Bolter traces the roots of our media multiverse to two developments in the second half of the twentieth

century: the decline of elite art and the rise of digital media. Bolter explains that we no longer have a collective belief in “Culture with a capital C.” The hierarchies that ranked, for example, classical music as more important than pop, literary novels as more worthy than comic books, and television and movies as unserious have broken down. The art formerly known as high takes its place in the media plenitude. The elite culture of the twentieth century has left its mark on our current

media landscape in the form of what Bolter calls “popular modernism.” Meanwhile, new forms of digital media have emerged and magnified these changes, offering new platforms for communication and expression. Bolter outlines a series of dichotomies that characterize our current media culture: catharsis and flow, the continuous rhythm of digital experience; remix (fueled by the internet's vast resources for sampling and mixing) and originality; history (not replayable) and simulation (endlessly

replayable); and social media and coherent politics. Under what conditions is anthropology possible today, when a crisis of social meaning—a crisis that makes it more difficult to conceive and manage our relation to the other—makes the need for anthropology appear more clearly than ever before? This book sets forth at least the beginning of an answer to this question. The volume's title combines a singular noun, anthropology, with a plural one, contemporaneous worlds. It aims to register

the double movement of universalization and particularization that is simultaneously affecting the entire planet. Social anthropology has always taken into account the context of the groups and phenomena it studied. Today, while multiplicity is being maintained or, more precisely, renewed, that context has become, in all cases, planetary. Positioned in opposition not only to political theories of universalization and uniformization more or less tied to the theme of “the

end of history,” but also to “postmodernist” versions of anthropological theories of multiplicity and relativism, the author argues that social anthropology, through its self-critical tradition, is fully capable of adapting to the accelerated change that is continuously recomposing relations between universalism and particularisms. It is for social anthropology to select, analyze, and understand the new modes of sociality and the new spaces in which (not without calamities and

The book argues that authority is not a thing to be possessed or lost, but a relationship arising in the connections between those laying claim to being an authority and those who assent to it. He then considers journalists' relationships with the audiences, sources, technologies, and critics that shape journalistic authority in the contemporary media environment. This is a systematic and accessible introduction to the critical concepts, structures and professional practices of political communication. Lilleker presents over 50 core concepts in political communication which cement together various strands of theory. From aestheticisation to virtual politics, he explains, illustrates and provides selected further reading. He considers both practical and theoretical issues central to political communication and offers a critical assessment of recent developments in political communication.

Annotation. Digital methods may be contrasted with what has come to be known as virtual methods, a currently dominant approach to the study of the Internet. Virtual methods, rooted in the U.K. Virtual Society? program (1997-2002), sought to ground cyberspace by demonstrating how it was hardly a realm apart. Whereas virtual methods have made great strides, they rely on methods imported from the humanities and the social sciences. Do the methods have to change, owing to the specificity of the medium and its objects? With the end of the virtual, I propose that Internet research may be put to new uses, given an emphasis on natively

digital as opposed to digitized methods. How to capture and analyze hyperlinks, tags, search engine results, archived websites, and other digital objects? What may one learn from how online devices make use of the objects, and how may such uses be repurposed for social and cultural research?

Ultimately, I propose a research practice that grounds claims about cultural change and societal conditions in online dynamics. This title can be previewed in Google Books - <http://books.google.com/books?vid=ISBN9789056295936>.
