The definitive guide to special needs education in the UK, fully revised and updated for this new edition. Special needs provision has changed rapidly in recent years, as awareness of different conditions has grown. Schools for Special Needs explains the system and the application/selection processes involved, and offers parents comprehensive independent advice on all the important areas. It offers authoritative and practical advice on how to identify the need for special education and how to make the right choices. With details of over 2000 establishments and guidance from experts in all sectors of special education, this book is an indispensable aid to all those (professionals and laypeople) investigating the legal and practical aspects of ensuring suitable educational provision for children and young people at all stages of education.

Covering contemporary policy issues, perspectives from practice and a range of common syndromes and barriers Special Educational Needs presents a wealth of information and guidance for students and professionals on how to achieve effective, inclusive practice. Second edition features include: · fully revised annotated further readings and links to useful websites; · a new chapter on Autism and Applied Behaviour Analysis (ABA) · a new chapter on Down Syndrome · updated reference to legislation, including the SEND Code of Practice (2014) · updated case studies covering 0-18 age range This comprehensive course text is ideal for students, teachers, practitioners and specialists, and provides a solid foundation for understanding and supporting learners with additional needs.

This book describes an approach to teaching which is designed to take account not only of the problems encountered by children with dyslexia when learning to read, spell and write, but also of the nature of the task that the dyslexic child is trying to master. This second edition has been revised and expanded to include new approaches to the teaching of phonics, recent ideas about developing reading skills, the revised National Curriculum and the Code of Practice, and new developments in IT and software for teaching. There are completely new chapters covering early recognition, helping younger children, and difficulties with mathematics; and the sections on testing and monitoring work and on materials and games for teaching have also been expanded to form individual chapters.

Dyslexia is a specific learning difficulty that hinders the learning of literacy skills. This problem with managing verbal codes in memory is neurologically based and tends to run in families. Other symbolic systems, such as mathematics and musical notation, can also be affected. Dyslexia can occur at any level of intellectual ability. It can accompany, but is not a result of, lack of motivation, emotional disturbance, sensory impairment or meagre opportunities. The effects of dyslexia can be alleviated by skilled specialist teaching and committed learning. Moreover many dyslexic people have visual and spatial abilities which enable them to be successful in a wide range of careers. The appearance of this book .. is to be welcomed. It represents a full statement of the best practice to be found in the many kinds of intervention that are conducted with dyslexic students. It addresses some fundamental questions that are seldom asked and much of what the skilled teacher knows and does is set down here in print for the first time. From the Preface: `Collectively, the chapters provide a synthesis of current practice focusing on how to assess and treat the symptoms of dyslexia, guided by a proper understanding of the cognitive and linguistic weaknesses that underpin the condition. The book makes clear that the backbone of intervention for dyslexia is a highly structured multisensory approach that teaches reading and spelling skills at the appropriate rate. However, it is also explicit in pointing out that such a programme must be delivered with due attention to individual differences in the other cognitive skills that contribute to literacy development, and take account of the learner's style, interests and not least their confidence and self-esteem. This book provides an important resource for teachers who wish to become competent in the skills required for the assessment, teaching, supporting and counselling of dyslexic people in a variety of settings. It promises to reach many teachers and in turn, their students and families'. Margaret J. Snowling, University of York, UK
