How is academia portrayed in children's literature? This Element ambitiously surveys fictional professors in texts marketed towards children, who are overwhelmingly white and male, tending to be elderly scientists. Professors fall into three stereotypes: the vehicle to explain scientific facts, the baffled genius, and the evil madman. By the late twentieth century, the stereotype of the male, mad, muddlehead, called Professor SomethingDumb, is formed in humorous yet pejorative fashion. This Element provides a publishing history of the role of academics in children's literature, questioning the book culture which promotes the enforcement of stereotypes regarding intellectual expertise in children's media. This title is also available, with additional material, as Open Access.

We have built a world that no longer fits our bodies. Our genes - selected through our evolution - and the many processes by which our development is tuned within the womb, limit our capacity to adapt to the modern urban lifestyle. There is a mismatch. We are seeing the impact of this mismatch in the explosion of diabetes, heart disease and obesity. But it also has consequences in earlier puberty and old age. Bringing together the latest scientific research in evolutionary biology, development, medicine, anthropology and ecology, Peter Gluckman and Mark Hanson, both leading medical scientists, argue that many of our problems as modern-day humans can be understood in terms of this fundamental and growing mismatch. It is an insight that we ignore at our peril.

First in the USA-Today bestselling Leigh Koslov Mystery Series! "A funny, fast-paced, clever, and unusual mystery that will have readers clamoring for more. Sheer delight." --Carolyn Hart The truth about what happened in 1949 went to Paul Fischer's grave... Too bad his body didn't! Advertising copywriter Leigh Koslov doesn't pack heat -- just a few extra pounds. And she doesn't go looking for trouble. When she moved into her cousin Cara's refurbished Victorian house, she wasn't planning on discovering a corpse -- certainly not one that had been embalmed ten years before. But as anyone in the small Pittsburgh borough of Avalon could tell her, her cousin's house has a history attached. A history dating back to two mysterious deaths in the summer of 1949. Someone wants Leigh and Cara out of the house -- someone who has something to hide. But that someone doesn't know Leigh's impetuous cousin, and when Cara digs her heels in, Leigh looks to her old college chum, local policewoman Maura Polanski, for help. But the answers the trio find only point to more questions. Were the scandalous deaths of fifty years ago really an accident and a suicide? Or were they murder? The nearer the women get to the truth, the more desperate someone becomes. Because some secrets are better off kept. Especially when they hit close to home! "A thoroughly delightful debut. Bright, breezy, and witty. I couldn't put it down." --Tamar Myers Originally published in mass market paperback byNAL/Penguin, Putnam, Inc. in 1999.

big history and the future of humanity " This remains the best single attempt to theorize big history as a discipline that can link core concepts and paradigms across all historical disciplines, from cosmology to geology, from biology to human history. With additional and updated material, the Second Edition also offers a fine introduction to the history of big history and a superb introductory survey to the big history story. Essential reading for anyone interested in a rapidly evolving new field of scholarship that links the sciences and the humanities into a modern, science-based origin story. " David Christian, Macquarie University " Notable for its theoretic approach, this new Second Edition is both an indispensable contribution to the emerging big-history narrative and a powerful university textbook. Spier defines words carefully and recognizes the limits of current knowledge, aspects of his own clear thinking. " Cynthia Brown, Emerita, Dominican University of California Reflecting the latest theories in the sciences and humanities, this new edition of Big History and the Future of Humanity presents an accessible and original overview of the entire sweep of history from the origins of the universe and life on Earth up to the present day. Placing the relatively brief period of human history within a much broader framework -- one that considers everything from vast galaxy clusters to the tiniest sub-atomic particles -- big history is an innovative theoretical approach that opens up entirely new multidisciplinary research agendas. Noted historian Fred Spier reveals how a thorough examination of patterns of complexity can offer richer insights into what the future may have in store for humanity. The second edition includes new learning features, such as highlighted scientific concepts, an illustrative timeline and comprehensive glossary. By exploring the cumulative history from the Big Bang to the modern day, Big History and the Future of Humanity, Second Edition, sheds important historical light on where we have been -- and offers a tantalizing glimpse of what lies ahead.
