

The Emergence Of Social Space (Language, Discourse, Society)

Emphasizing the advantages of working together and exploring the future of library services in an online, socially connected world, this exciting book shows how all public library professionals can take advantage of our strongest community and information tool—the library catalogue.

As a contribution to the anthropology of democracy, this book examines a local governance reform in India - focusing particularly on the 33% women's quota entailed. It highlights the interrelatedness of "doing gender" and "doing politics" and delineates the transformations of gendered political spaces and the shifting boundaries within which women of various castes and classes negotiate the meanings of politics. The book investigates the vernacularization of democracy and analyzes local politics as socially embedded - a framework that allows the frictions and contradictions of local politics to be explained without having to take recourse to dichotomies of "traditional vs. modern" or "formal vs. informal" politics. (Series: Anthropology / Ethnologie - Vol. 53)

Shows how leaders can access the deepest source of inspiration and vision □ Includes dozens of tested exercises, practices, and real-world examples We live in a time of massive institutional failure, one that requires a new consciousness and a new collective leadership capacity. In this groundbreaking book, Otto Scharmer invites us to see the world in new ways and in so doing discover a revolutionary approach to leadership. What we pay attention to and how we pay attention is key to what we create. What prevents us from attending to situations more effectively is that we aren't fully aware of and in touch with the inner place from which attention and intention originate. This is what Scharmer calls our blind spot. By moving through Scharmer's U process, we consciously access the blind spot and learn to connect to our authentic Self—the deepest source of knowledge and inspiration—in the realm of "presencing," a term coined by Scharmer that combines the concepts of presence and sensing. Based on ten years of research and action learning and interviews with over 150 practitioners and thought leaders, Theory U offers a rich diversity of compelling stories and examples and includes dozens of exercises and practices that allow leaders, and entire organizations, to shift awareness, connect with the best future possibility, and gain the ability to realize it.

Border Matters locates the study of Chicano culture in a broad social context. José Saldívar examines issues of representation and expression in a diverse, exciting assortment of texts—corridos, novels, poems, short stories, punk and hip-hop music, ethnography, paintings, performance, art, and essays. Saldívar provides a sophisticated model for a new kind of U.S. cultural studies, one that challenges the homogeneity of U.S. nationalism and popular culture by foregrounding the contemporary experiences and historical circumstances facing Chicanos and Chicanas. This intellectually adventurous, politically engaged study applies borderlands and diaspora theory to Chicano cultural practices in a way that permanently changes our understanding of both the Chicano experience and the meaning of cultural theory. Defying national (and nationalistic) paradigms of culture, Saldívar argues that the culture of the borderlands is trans-national, constituting a social space in which new relations, hybrid cultures, and multi-voiced aesthetics are negotiated. Saldívar's critical readings treat culture as a social force and reveal the presence of social contexts within cultural texts. Border Matters maps out a new terrain for the study of culture, reshaping the way we understand migration, national identity, and intellectual inquiry itself.

Empirical Investigations of Social Space

James Delle has solved a number of problems in Caribbean archaeology with An Archaeology of Social Space. He deals with most of the problems by using historical archaeology, and clearly implicates Ameri canist prehistorians. Although this book is about coffee plantations in the Blue Mountains area of Jamaica, it is actually about the whole Caribbean. Just as it is about all archaeology, not only historical archaeology, it is also a book about colonialism and national inde pendence and how these two enormous events happened in the context of eighteenth and nineteenth century capitalism. The first issue raised appears to be an academic topic that has come to be known as landscape archaeology. Landscape archaeology considers the planned spaces around living places. The topic is big, comprehensive, and new within historical archaeology. Its fundamen tal insight is that in the early modern and modern worlds everything within view could be made into money. Seeing occurs in space and from 1450, or a little before, everything that could be seen could, potentially, be measured. The measuring-and the accompanying culture of record ing called a scriptural economy-became a way of controlling people in space, for a profit. Dr. Delle thus explores maps, local philosophies of settlement, town dwelling, housing, and the actual condition of plantations and their buildings now, so as to describe coffee-Jamaica from 1790-1860.

Henri Lefebvre's Critical Theory of Space offers a rigorous analysis and revival of Lefebvre's works and the context in which he produced them. Biagi traces the historical-critical time-frame of Lefebvre's intellectual investigations, bringing to light a theoretical constellation in which historical methods intersect with philosophical and sociological issues: from Marxist political philosophy to the birth of urban sociology; from rural studies to urban and everyday life studies in the context of capitalism. Examining Lefebvre's extended investigations into the urban sphere as well as highlighting his goal of developing a "general political theory of space" and of innovating Marxist thought, and clarifying the various (more or less accurate) meanings attributed to Lefebvre's concept of the "right to the city" (analysed in the context of the French and international sociological and philosophical-political debate), Henri Lefebvre's Critical Theory of Space ultimately brings the contours of Lefebvre's innovative perspective—itself developed at the end of the "short twentieth century"—back into view in all its richness and complexity.

The recent growth in research on the topic of evolutionary novelties inspired this volume of Research in the Sociology of Organizations. While previous sociological work has done an admirable job of understanding selection and differentiation processes, it has widely ignored the origin of novelty and how it grows to form initial structures and practices. Emergence is an easy to understand intuitive concept, as it simply means that an object comes into existence or appearance, but it needs further unpacking as a description of a widespread social process. In this book, emergence is seen as a process that involves 1) the creation of novelty, 2) its growth to a salient size, and 3) its formation into a recognizable social object, process, or structure. Each step should be understood through theory and empirical work. Yet the theory of each step can differ from, though it may be related to, the theory of the other two. As a consequence, emergence is a much more complex research topic than is suggested by a single word and it is these complexities that are examined in this book.

In Caribbean writing, place is intimately inflected by displacement - place and displacement are not dichotomous; every 'here' invariably implies a 'there'. In line with this extreme imbrication of (dis)location, Caribbean writing in French explores questions of increasing global pertinence such as the relation between writing and displacement, local and distant space, text and place, identity and migration, passage and transformation. Contributions range across genres and the work of writers such as Aimé Césaire, Patrick Chamoiseau, René Dépestre, Édouard Glissant, Émile Ollivier, Gisèle Pineau, Simone Schwarz-Bart and Ernest Pépin. Topics explored include the poetics of dwelling space, the postmodern or postcolonial dynamic of the Creole town, and the textualization of place and displacement. Also included are essays on the drama of distance, the metamorphosis of recent Haitian writing, the literary reverberations of the figure of Toussaint L'Ouverture, and links between Ireland and the French Caribbean.

Tactics of the Human returns to American fiction published during the 1990s, formative years for digital cultures, to reconsider these narratives' comparative literary print methods of critically engaging with digital technologies and their now ubiquitous computation-based modes of circulation, scenes of writing, and social spaces. It finds that fiction by John Barth, Shelley Jackson, Leslie Marmon Silko, Ruth L. Ozeki, and Jeffrey Eugenides, by creatively transposing digital writing, material formats, and spatiotemporal orientations into print, registers shifting relations to technologies at multiple sites and scales. Grappling with the digital practices catalyzed by post–World War II biological, information, and systems theory, these literary narratives tactically enlist, and enable speculative diagnoses of, emerging relations to digital technologies. Their experimental technics comparatively retrace emerging relations to the digital as these impact American nationalisms and their transnational economic networks; processes of gendering and racialization that remain crucial to differential discourses of the human; and as they enter, unnoticed, into micropractices of everyday life and lived space. In the midst of expanding technoscientific processes of digital de- and re-materialization that render multiple, charged boundaries of the human increasingly plastic, Tactics of the Human illustrates why it is ever more crucial to query and assess the divergent (re)understandings of the human now categorized, quite loosely, as posthumanisms with particular attention to women's, subalterns', and other knowledges already considered liminal to the human. It identifies here and pursues strains of systems thinking, informed by feminist, new materialist, queer, and subaltern understandings of material practices, revealing why these are so pivotal to ongoing efforts to assess current limits to digital technics and expand upon their biological, cultural, social, and poetic potentialities.

One of the most significant and important advancements in information and communication technology over the past 20 years is the introduction and expansion of the Internet. Now almost universally available, the Internet brings us email, global voice and video communications, research repositories, reference libraries, and almost unlimited opportunities for daily activities. Bridging geographical distances in unprecedented ways, the Internet has impacted all aspects of our daily lives – from facilitating the running of businesses, the attainment of services and keeping in touch with friends and family. Accessible at any time and for many of us from our mobile phones, the Internet has opened up a world of knowledge and communication platforms that we cannot now imagine living without. This book explores the concept that the Internet has become a second action space for individuals. Coexisting with traditional and "obvious" real space, the Internet serves as a novel spatial platform and action space to its subscribers all over the world. Kellerman expertly discusses this notion and examines the practical integration of cyberspace with real space. Part I examines the Internet as a platform for action and presents its relations with physical space concerning a range of uses and applications which were traditionally performed in physical space only. It discusses the idea that the Internet has become a second space and explores theoretical perspectives surrounding this notion. The Internet has undeniably made humankind more efficient and connected. Part II explores the Internet as an action space for human life, considering basic human needs, curiosity, identity and social relations. It further considers instances whereby use and application of the Internet cannot be fully performed in real space, mainly regarding people's presentation of identity. Part III explores daily actions over the Internet, such as work, shopping, banking and social interactions. Kellerman also briefly touches on the darker aspects that the expansion of the Internet has made possible – including its role in fraud and other crimes. The concluding chapter discusses people living across the two spaces and identifies potential future developments. The Internet as Second Actions Space will appeal to students across the social sciences, in particular those studying Geography, Sociology, Media Studies, Internet Studies, Business and related disciplines.

If today students of social theory read Jürgen Habermas, Michael Foucault and Anthony Giddens, then proper regard to the question of culture means that they should also read Raymond Williams, Julia Kristeva and Slavoj Žižek. The second edition of the Routledge Handbook of Social and Cultural Theory is fully revised and updated to provide students, teachers and researchers with a comprehensive, critical guide to the major traditions of thought in social and cultural theory, as well as tracing the complex intellectual connections between these distinct but related approaches to understanding society and culture. The Handbook, edited by acclaimed sociologist Anthony Elliott, develops a powerful argument for bringing together social and cultural theory more systematically than ever before. Key social and cultural theories, ranging from classical approaches to postmodern, psychoanalytic and post-feminist approaches, are drawn together and critically appraised. There are also new chapters on mobilities and migrations, as well as posthumanism. The Handbook, written in a clear and direct style will appeal to a wide audience of students and scholars. The extensive references and sources will direct students to areas of further study.

A dynamic framework for studying social emergence The social sciences have sophisticated models of choice and equilibrium but little understanding of the emergence of novelty. Where do new alternatives, new organizational forms, and new types of people come from? Combining biochemical insights about the origin of life with innovative and historically oriented social network analyses, John Padgett and Walter Powell develop a theory about the emergence of organizational, market, and biographical novelty from the coevolution of multiple social networks. They demonstrate that novelty arises from spillovers across intertwined networks in different domains. In the short run actors make relations, but in the long run relations make actors. This theory of novelty emerging from intersecting production and biographical flows is developed through formal deductive modeling and through a wide range of original historical case studies. Padgett and Powell build on the biochemical concept of autocatalysis—the chemical definition of life—and then extend this autocatalytic reasoning to social processes of production and communication. Padgett and Powell, along with other colleagues, analyze a very wide range of cases of emergence. They look at the emergence of organizational novelty in early capitalism and state formation; they examine the transformation of communism; and they analyze with detailed network data contemporary science-based capitalism: the biotechnology industry, regional high-tech clusters, and the open source community.

The Routledge Handbook of Chinese Culture and Society is an interdisciplinary resource that offers a comprehensive overview of contemporary Chinese social and cultural issues in the twenty-first century. Bringing together experts in their respective fields, this cutting-edge survey of the significant phenomena and directions in China today covers a range of issues including the following: State, privatisation and civil society Family and education Urban and rural life Gender, and sexuality and reproduction Popular culture and the media Religion and ethnicity Forming an accessible and fascinating insight into Chinese culture and society, this handbook will be invaluable to students and scholars across a range of disciplines, including anthropology, sociology, area studies, history, politics and cultural and media studies.

In Uneven Development, a classic in its field, Neil Smith offers the first full theory of uneven geographical development, entwining theories of space and nature with a critique of capitalist development. Featuring pathbreaking analyses of the production of nature and the politics of scale, Smith's work anticipated many of the uneven contours that now mark neoliberal globalization. This third edition features an afterword updating the analysis for the present day.

This new book brings together Doreen Massey's key writings on threearas central to a range of disciplines. In addition, the authorreflects on the development of these ideas and outlines her currentposition on these important issues. The book is organized around the three themes of space, placeand gender. It traces the development of ideas about the socialnature of space and place and the relation of both to issues ofgender and debates within feminism. It is debates in these areaswhich have been crucial in bringing geography to the centre ofsocial sciences thinking in recent years, and this book includeswritings that have been fundamental to that process.

Beginning withthe economy and social structures of production, it develops awider notion of spatiality as the product of intersecting socialrelations. In turn this has led to conceptions of 'place' asessentially open and hybrid, always provisional and contested.These themes intersect with much current thinking about identitywithin both feminism and cultural studies. Each of the themes is preceded by a section which reflects onthe development of ideas and sets out the context of theirproduction. The introduction assesses the current state of play andargues for the close relationship of new thinking on each of thesethemes. This book will be of interest to students in geography,social theory, women's studies and cultural studies.

For the last twenty-five years, Language, Discourse, Society has been the most intellectually challenging series in English. Its titles range across the disciplines from linguistics to biology, from literary criticism to law, combining vigorous scholarship and theoretical analysis at the service of a broad political engagement. This anniversary reader brings together a fascinating group of thinkers from both sides of the Atlantic with an introductory overview from the editors which considers the development of theory and scholarship over the past two decades.

Through a series of case studies this book brings to the fore the voices, lives, and capacities of people with mental health problems as well as the difficulties they face. It effectively demonstrates the ways people with mental health problems are active in re-scripting versions of social recovery through their use of very different community spaces. Offers a 'hopeful epistemology' not typically found in mental health-related research Interrogates neo-liberal dogma that defines people with mental health problems as active social citizens wholly responsible for their own recoveries and acceptance Brings to the fore the voices of, lives, capacities and difficulties facing people with mental health problems Imaginatively differentiates rural, urban, interest and technological communities, disrupting familiar and conventional accounts of social inclusion and 'the local' Demonstrates how people with mental health problems are active in re-scripting their own social recoveries through their use and understanding of different social spaces

A "Learning Network" is a community of people who help each other to better understand and handle certain events and concepts in work or life. As a result – and sometimes also as an aim – participating in learning networks stimulates personal development, a better understanding of concepts and events, career development, and employability. "Learning Network Services" are Web services that are designed to facilitate the creation of distributed Learning Networks and to support the participants with various functions for knowledge exchange, social interaction, assessment and competence development in an effective way. The book presents state-of-the-art insights into the field of Learning Networks and Web-based services which can facilitate all kinds of processes within these networks.

Theories of performativity have garnered considerable attention within the social sciences and humanities over the past two decades. At the same time, there has also been a growing recognition that the social production of space is fundamental to assertions of political authority and the practices of everyday life. However, comparatively little scholarship has explored the full implications that arise from the confluence of these two streams of social and political thought. This is the first book-length, edited collection devoted explicitly to showcasing geographical scholarship on the spatial politics of performativity. It offers a timely intervention within the field of critical human geography by exploring the performativity of political spaces and the spatiality of performative politics. Through a series of geographical case studies, the contributors to this volume consider the ways in which a performative conception of the "political" might reshape our understanding of sovereignty, political subjectification, and the production of social space. Marking the 20th anniversary of the publication of Judith Butler's classic, Bodies That Matter (1993), this edited volume brings together a range of contemporary geographical works that draw exciting new connections between performativity, space, and politics.

An important challenge to organization theory is to search for constructs that explain how contexts for work emerge, evolve, persist and change. This book explores the concept of "space" as representing a wide variety of contexts. Organization as a process, as distinguished from organization as an entity, is seen as the construction of space, where space is the outcome of human action and interaction as well as providing a context for actions and interaction. The book shows how different forms of space lie at the base of a number of developments in organization theory. It then takes the step to show how contemporary developments in social science represented by works by writers such as Giddens, Luhmann, Latour and Bourdieu can be used to establish a dynamic understanding of organization as space. Insights from these discussions are used to establish a unique and coherent way of understanding complexities of modern organization.

The danwei (workunit) has been the fundamental social and spatial unit of urban China under socialism. With particular focus on the link between spatial forms and social organization, this book traces the origins and development of this critical institution up to the present day.

The author challenges the traditional manner in which regionalization has been approached and suggests that the failure to come to grips with this phenomenon is the result of the modernist regulation of space to margins of analysis. He advances instead a spatially orientated approach which views states as one of multiple layers of a global social space. Regionalization represents the construction of new layers in an effort to search for an institutional fix to the challenges of globalization.

The role of aerial photography in the evolution of the concept of social space"and its impact on French urban planning in the mid-twentieth century. In mid-twentieth century France, the term "social space" (l'espace social)--the idea that spatial form and social life are inextricably linked--emerged in a variety of social science disciplines. Taken up by the French New Left, it also came to inform the practice of urban planning. In The View from Above, Jeanne Haffner traces the evolution of the science of social space from the interwar period to the 1970s, illuminating in particular the role of aerial photography in this new way of conceptualizing socio-spatial relations. As early as the 1930s, the view from above served for Marcel Griaule and other anthropologists as a means of connecting the social and the spatial. Just a few decades later, the Marxist urban sociologist Henri Lefebvre called the perspective enabled by aerial photography--a technique closely associated with the French colonial state and military--"the space of state control." Lefebvre and others nevertheless used the notion of social space to recast the problem of massive modernist housing projects (grands ensembles) to encompass the modern suburb (banlieue) itself--a critique that has contemporary resonance in light of the banlieue riots of 2005 and 2007. Haffner shows how such "views" permitted new ways of conceptualizing the old problem of housing to emerge. She also points to broader issues, including the influence of the colonies on the metropole, the application of sociological expertise to the study of the built environment, and the development of a spatially oriented critique of capitalism.

The ongoing processes of globalization and regionalization have drawn attention away from the traditional domains of nation-states and their interaction. However, the border-crossing activities of non-state agencies, organizations and institutions should not be overlooked, as they can shed new light on our common understanding of the contemporary world. Using the concept of transnational social spaces, contributors to this volume demonstrate the importance of transnational spaces. A collaborative project by experts across the social science disciplines, Transnational Social Spaces focuses in particular on the German-Turkish context.

Modern-day Namibian history has largely been shaped by three major eras: German colonial rule, South African apartheid occupation, and the Liberation Struggle. It was, however, not only military conquest that laid the cornerstone for the colony, but also how the colony was imagined, the [dream] of this colony. As a tool of discursive worldmaking, literature has played a major role in providing a framework in which to [dream] Namibia, first from outside its borders, and then from within. In Fictioning Namibia as a Space of Desire, Renzo Baas employs Henri Lefebvre's city/countryside dialectic and reworks it in order to uncover how fictional texts played an integral part in the violent acquisition of a foreign territory. Through the production of myths around whiteness, German and South African authors designed a literary space in which control, destruction, and the dehumanisation of African peoples are understood as a natural order, one that is dictated by history and its linear continuation. These European texts are offset by Namibia's first novel by an African, offering a counter-narrative to the colonial invention that was (German) South West Africa.

This book provides an in-depth view on Bourdieu's empirical work, thereby specially focusing on the construction of the social space and including the concept of the habitus. Themes described in the book include amongst others: [the theory and methodology for the construction of [social spaces]], [the relation between various [fields] and [the field of power]], [formal construction and empirical observation of habitus, [the formation, accumulation, differentiation of and conversion between different forms of capital, [relations in geometric data analysis. The book also includes contributions regarding particular applications of Bourdieu's methodology to traditional and new areas of research, such as the analysis of institutional, international and transnational fields. It further provides a systematic introduction into the empirical construction of the social space.

This guide provides an overview of the thematic areas, analytical aspects, and avenues of research which, together, form a broader conversation around doing spatial history. Spatial history is not a field with clearly delineated boundaries. For the most part, it lacks a distinct, unambiguous scholarly identity. It can only be thought of in relation to other, typically more established fields. Indeed, one of the most valuable utilities of spatial history is its capacity to facilitate conversations across those fields. Consequently, it must be discussed in relation to a variety of historiographical contexts. Each of these have their own intellectual genealogies, institutional settings, and conceptual path dependencies. With this in mind, this guide surveys the following areas: territoriality, infrastructure, and borders; nature, environment, and landscape; city and home; social space and political protest; spaces of knowledge; spatial imaginaries; cartographic representations; and historical GIS research.

Israel's Tabernacle as Social Space

The Spatial Construction of Organization

May '68 and Its Afterlives

A Spatial Approach to Regionalisms in the Global Economy

During May 1968, students and workers in France united in the biggest strike and the largest mass movement in French history. Protesting capitalism, American imperialism, and Gaullism, 9 million people from all walks of life, from shipbuilders to department store clerks, stopped working. The nation was paralyzed--no sector of the workplace was untouched. Yet, just thirty years later, the mainstream image of May '68 in France has become that of a mellow youth revolt, a cultural transformation stripped of its violence and profound sociopolitical implications. Kristin Ross shows how the current official memory of May '68 came to serve a political agenda antithetical to the movement's aspirations. She examines the roles played by sociologists, repentant ex-student leaders, and the mainstream media in giving what was a political event a predominantly cultural and ethical meaning. Recovering the political language of May '68 through the tracts, pamphlets, and documentary film footage of the era, Ross reveals how the original movement, concerned above all with the question of equality, gained a new and counterfeit history, one that erased police violence and the deaths of participants, removed workers from the picture, and eliminated all traces of anti-Americanism, anti-imperialism, and the influences of Algeria and Vietnam. May '68 and Its Afterlives is especially timely given the rise of a new mass political movement opposing global capitalism, from labor strikes and anti-McDonald's protests in France to the demonstrations against the World Trade Organization in Seattle.

In post-industrial societies more and more people earn an income in creative knowledge work, a highly flexible labour market segment that demands a geographically mobile workforce. Creative knowledge work is based on an understanding of language, culture and symbolic meanings. This can best be obtained through local and national embeddedness. Yet, this necessity for embeddedness stands in contrast to the demand in geographical mobility. How is this contradiction solved by individuals? What new forms of place attachment does this bring about? This book introduces a showcase of 25 multilocal creative knowledge workers, who live in different countries at the same time. It investigates how continuous mobility becomes part of their lifeworld, and how it changes their feelings of belonging and practices of place attachment. Applying an innovative methodological mix of social phenomenology, hermeneutics and mental mapping, this book takes a detailed look at biographies and the role of places in mobile lifeworlds. Plug&Play Places brings forth the idea that places have to be understood as individual items, which are configured and then plugged into the ' system ' of the own lifeworld. They can be ' played ' without great effort once an individual needs to make use of them. This new type of place attachment is a form of subjective standardization of place, which complements the well-known models of objective standardization of places. Plug&Play Places is relevant for scientists who deal with mobility and its impact on individual lifeworlds, with transnational multilocality and with flexibilized labour markets. Furthermore, the book provides a detailed qualitative perspective which can enrich the explanations of quantitative research in the same field. It is an interesting reading also for practitioners engaged in urban planning, housing and real estate development. Robert Nadler holds a doctoral degree in Urban and Local European Studies from the University of Milan-Bicocca. He is a researcher at the Leibniz Institute for Regional Geography and published on creative industries, multilocality and labour mobility.

Little attention has been paid to the history of the influence of the social sciences upon medical thinking and practice in the twentieth century. The essays in this volume explore the consequences of the interaction between medicine and social science by evaluating its significance for the moral and arterial role of medicine in modern societies.

Rather than the customary focus on the activities of individual collectors, The Emergence of the Antique and Curiosity Dealer in Britain 1815 – 1850: The Commodification of Historical Objects illuminates the less-studied roles played by dealers in the nineteenth-century antique and curiosity markets. Set against the recent ' art market turn ' in scholarly literature, this volume examines the role, activities, agency and influence of antique and curiosity dealers as they emerged in the opening decades of the nineteenth century. This study begins at the end of the Napoleonic Wars, when dealers began their wholesale importations of historical objects; it closes during the 1850s, after which the trade became increasingly specialised, reflecting the rise of historical museums such as the South Kensington Museum (V&A). Focusing on the archive of the early nineteenth-century London dealer John Coleman Isaac (c.1803 – 1887), as well as drawing on a wide range of other archival and contextual material, Mark Westgarth considers the emergence of the dealer in relation to a broad historical and cultural landscape. The emergence of the antique and curiosity dealer was part of the rapid economic, social, political and cultural change of early nineteenth-century Britain, centred around ideas of antiquarianism, the commercialisation of culture and a distinctive and evolving interest in historical objects. This book will be of interest to scholars in art history, histories of collecting, museum and heritage studies and nineteenth-century culture.

Social Medicine and Medical Sociology in the Twentieth Century

2nd Edition

Spatial Ecologies

The View from Above

Uneven Development

Space, Place and Gender

Routledge Handbook of Social and Cultural Theory

Recent terms such as globalisation, virtual reality, and cyberspace indicate that the traditional notion of the geographic and the social space is changing. New Transnational Social Spaces illustrates the contemporary relationship between the social and the spatial which has emerged with new communication and transportation technologies, alongside the massive transnational movement of people.

The 1870s in France – Rimbaud's moment, and the subject of this book – is a decade virtually ignored in most standard histories in France. Yet it was the moment of two significant spatial events: France's expansion on a global scale, and, in the spring of 1871, the brief existence of the Paris Commune – the construction of the revolutionary urban space. Arguing that space, as a social fact, is always political and strategic, Kristin Ross has written a book that is at once a history and geography of the Commune's anarchist culture – its political language and social relations, its values, strategies, and stances. Central to her analysis of the Commune as a social space and oppositional culture is a close textual reading of Arthur Rimbaud's poetry. His poems – a common thread running through the book – are one set of documents among many in Ross's recreation of the Communard experience. Rimbaud, Paul Lafargue, and the social geographer Elisée Reclus serve as emblematic figures moving within and on the periphery of the Commune; in their resistance to the logic and economy of the capitalist conception of work, in their challenge to work itself as a term of identity, all three posed a threat to the existing order. Ross looks at these and other emancipatory notions as aspects of Communard life, each with an analogous strategy in Rimbaud's poetry. Applying contemporary theory, to a wealth of little-known archival material, she has written a fresh, persuasive, and original book.

Social spaces for language learning, places where learners can come together in order to learn with and from each other, have an important role to play in foreign language acquisition and L2 identity development. In this book, sixteen students, teachers and administrators tell how they experience the L-café, a social language learning space located on the campus of a Japanese university. As part of a narrative inquiry, their unabridged stories are framed by background information on the study and an in-depth analysis informed by theories of space and place, and complex dynamic systems. Addressing practical as well as theoretical concerns, this book provides advice for language professionals developing and managing social language learning spaces, pedagogical insights for teachers exploring their role in out-of-class learning, and direction for researchers examining the various facets of language learning beyond the classroom.

Spatial Ecologies takes a new look at the "spatial turn" in French cultural and critical theory since 1968. Verena Andermatt Conley examines how Henri Lefebvre, Michel de Certeau, Jean Baudrillard, Marc Augé, Paul Virilio, Bruno Latour and Etienne Balibar reconsider the experience of space in the midst of considerable political and economic turmoil. The book considers why French critical theorists turned away from questions of time and looked instead toward questions of space. It asks what writing about space can tell us about life in late capitalism. Conley links this question to the problematic of habituality, taking us back to Heidegger and showing how it informs much of French theory. Building on the author's acclaimed earlier study Ecopolitics, Spatial Ecologies argues, through the voices of the authors taken up the eight chapters, for recognition of the virtue of spatial theory and its pragmatic applications in the global milieu. It will be required reading for scholars of literary and cultural theory, and twentieth- and twenty-first century French culture.

Emergence

Dance has been connected to the practices and ideologies that have shaped notions of a Nordic region for more than a century and it is ingrained into the culture and society of the region. This book investigates different dance phenomena that have either engaged with or dismantled notions of Nordicness. Looking to the motion of dancers and dance forms between different locations, organizations and networks of individuals, its authors discuss social dancing, as well as historical processes associated with collaborations in folk dance and theatre dance. They consider how similarities and differences between the Nordic countries may be discerned, for instance in patterns of reception at the arrival of dance forms from outside the Nordic countries - and vice versa, how dance from the Nordic countries is received in other parts of the world, as seen for example in the Nordic Cool Festival at the Kennedy Centre in 2013. The book opens a rare window into Nordic culture seen through the prism of dance. While it grants the reader new insights into the critical role of dance in the formation and imagining of a region, it also raises questions about the interplay between dance practices and politics.
