American history has always been an irresistible source of inspiration for filmmakers, and today, for good or ill, most Americans'sense of the past likely comes more from Hollywood than from the works of historians. In

the area of randomized parallel computing. A brief introduction to randomized algorithms In the analysis of algorithms, at least three different measures of performance can be used: the best case, the worst case, and

Where To Download The Time Machine (Coterie Classics)

the average case. Often, the average case run time of an algorithm is much smaller than the worst case. 2 For instance, the worst case run time of Hoare's quicksort is $O(n^2)$, whereas its average case run time is only $O(n \log n)$. The average

Where To Download The Time Machine (Coterie Classics)

case analysis is conducted with an assumption on the input space. The assumption made to arrive at the $O(n \log n)$ average run time for quicksort is that each input permutation is equally likely. Clearly, any average case

analysis is only as good as how valid the assumption made on the input space is.

Randomized algorithms achieve superior performances without making any assumptions on the inputs by making coin flips within the

algorithm. Any analysis done of randomized algorithms will be valid for all possible inputs.

An examination of
technology and
politics in the
evolution of the
British
"government

Government
Machine, Jon Agar
traces the

mechanization of government work in the United Kingdom from the nineteenth to the early twenty-first century. He argues that this transformation has been tied to the rise of "expert movements,"

(Coterie Classics)

groups whose authority has rested on their expertise. The deployment of machines was an attempt to gain control over state action—a revolutionary move. Agar shows how

Where To Download The Time Machine (Coterie Classics)

mechanization followed the popular depiction of government as machine-like, with British civil servants cast as components of a general purpose "government machine"; indeed, he argues that

today's general purpose computer is the apotheosis of the civil servant. Over the course of two centuries, government has become the major repository and user of information; the Civil Service itself

can be seen as an information-

processing entity.

Agar argues that the changing capacities of government have depended on the implementation of new technologies, and that the adoption of new

technologies has depended on a vision of government and a fundamental model of organization. Thus, to study the history of technology is to study the state, and vice versa.
