*As people throughout the world react to globalization and revert to nationalism, they are proclaiming distinct cultural identities for themselves. Cultural identity seems to offer a defensive wall against the homogenizing effects of globalization and a framework for nurturing and protecting cultural differences. In this short and provocative book, François Jullien argues that this emphasis on cultural identity is a mistake. Cultures exist in relation to one another and they are constantly mutating and transforming themselves. There is no cultural identity, there are only what Jullien calls 'resources'.*

*Resources are created in a certain space, they are available to all and belong to no one. They are not exclusive, like the values to which we proclaim loyalty; instead, we deploy them or not, activate them or let them fall by the wayside, and each of us as individuals is responsible for these choices. This conceptual shift requires us to redefine three key terms - the universal, the uniform and the common. Equipped with these concepts, we can rethink the dialogue between cultures in a way that avoids what Jullien sees as the false debate about identity and difference. This powerful critique of the modern shibboleth of cultural identity will appeal to anyone interested in the great social and political questions*

*The death of Peter Winch in 1997 sparked a revived interest in his work with this book arguing his work suffered misrepresentation in both recent literature and in contemporary critiques of his writing. Debates in philosophy and sociology about foundational questions of social ontology and methodology often claim to have adequately incorporated and moved beyond Winch's concerns. Re-establishing a Winchian voice, the authors examine how such contentions involve a failure to understand central themes in Winch's writings and that the issues which occupied him in his *Idea of a Social Science and its Relation to Philosophy* and later papers remain central to social*

It draws parallels with other movements in the social studies, notably ethnomethodology, to demonstrate how Winch's central claim is both more significant and more difficult to transcend than sociologists and philosophers have hitherto imagined. These mismatches are the building blocks of exclusion. In Mismatch, Kat Holmes describes how design can lead to exclusion, and how design can also remedy exclusion. Inclusive design methods—designing objects with rather than for excluded users—can create elegant solutions that work well and benefit all. It's time to stop providing simplistic, one-dimensional, all-you-gotta-do panaceas. "the economy." Yet the dominant cultural and media narrative in response to major economic crisis is almost always one of moral outrage. How do we reconcile this tension or explain this paradox by which Economics seems to have both everything and nothing to do with values? The discipline of modern economics hypostatizes and continually reifies a domain it calls "the economy"; only this epistemic practice makes it possible to falsely separate the question of value from the broader inquiry into the economic. And only if we have first eliminated value from the domain of economics can we then transform

stories of financial crisis or massive corporate corruption into simple tales of ethics. But if economic forces establish, transform, and maintain relations of value then it proves impossible to separate economics from questions of value, because value relations only come to be in the world by way of economic logics. This means that the "positive economics" spoken of so fondly in the textbooks is nothing more than a contradiction in terms, and as this book demonstrates, there's no such thing as "the economy." To grasp the basic logic of capital is to bring into view the unbreakable link
