**The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.**

*Do you find it scary and overwhelming to take care of someone who has suffered a brain injury? Caring for a patient who has had a stroke can be very challenging. Trust us, we have been right where you are and we know the intimidation you might feel when thinking of all the components of caring for patients with this complex diagnosis. Nursing assessment is a crucial piece of the overall puzzle that will determine how the patient is cared for and, ultimately, the outcome of the patient. From the moment a patient arrives to the hospital with stroke-like symptoms, all members of the stroke care team begin working on the patient's history, obtaining tests, drawing labs, developing a plan, implementing safety measures, carrying out time-sensitive orders, and educating the patient and the patient's family. This book is a guide for anyone new to caring for stroke patients in the hospital setting. We have used our own nursing and teaching experience to help explain how to assess, anticipate, and prevent complications, and what to expect while caring for anyone who has been admitted to the hospital for a stroke or stroke-like symptoms.
