presents an
answer from the
perspective of
computing,
namely, the
theory of
cognitive prism.
To recognize an
environment, an
intelligent

system only
needs to classify
objects,
structures them
based on the
connection
relation (not
through
measuring!),
subjectively
orders the
objects, and

File Type PDF A

Common Sense

Geographic

Knowledge Base

For Gir

compares with
the target
environment,
whose
knowledge is
similarly
structured. The
intelligent
system works,
therefore, like a
prism: when a
beam of light (a

scene) reaches
(is perceived) to

an optical prism

(by an

intelligent

system), some

light (objects) is

reflected (are

neglected),

those passed

through (the

recognized

distorted (are
ordered

differently). So
comes the term
'cognitive
prism'! Two
fundamental
propositions
used in the
theory can be
informally
