This book presents new research and theory at the regional scale showing the forms metropolitan regions might take to achieve sustainability. At the city scale the book presents case studies based on the latest research and practice from Europe, Asia and North America, showing how both planning and flagship design can propel cities into world class status, and also improve sustainability. The contributors explore the tension between polycentric and potentially sustainable development, and urban fragmentation in a physical context, but also in a wider cultural, social and economic context.

Global Cities and Urban Theory provides an innovative set of approaches to understanding some of the world's major cities, working with concepts such as smart cities, volumetric urbanism, and critical accounting to illustrate the everyday agents and practices that place cities in the world. Donald McNeill draws on detailed discussions of major cities such as London, San Francisco, Paris and Singapore to provide a deep understanding of how urban theory can be grounded in the cultural economies of urban development. The book: Reviews the insights of key thinkers such as Bruno Latour, Mike Davis, and Jane M. Jacobs in relation to specific cities. Highlights methodological and epistemological notes on each theme. Provides case studies of nine key global cities, examined in the context of specific material and spatial practices. Essential reading for upper level students and researchers across urban studies, urban geography, urban sociology and urban policy.

Cities are frequently viewed as passive participants to state and national efforts to solve the toughest urban problems. But the evidence suggests otherwise. Cities are actively devising innovative policy solutions and they have the potential to do even more. In this volume, the authors examine current threats to communities across the U.S. and the globe. They draw on first-hand experience with, and accounts of, the crises already precipitated by climate change, population shifts, and economic inequality. This volume is distinguished, however, by its central objective of traveling beyond a description of problems and a discussion of their serious implications. Each of the thirteen chapters frame specific recommendations and guidance on the range of core capacities and interventions that 21st Century cities would be prudent to consider in mapping their immediate and future responses to these critical problems. How Cities Will Save the World brings together authors with frontline experience in the fields of city redevelopment, urban infrastructure, healthcare, planning, immigration, historic preservation, and local government administration. They not only offer their ground level view of threats caused by climate change, population shifts, and economic inequality, but they provide solution-driven narratives identifying promising innovations to help cities tackle this century's greatest adversities.

In a rapidly urbanizing and globalized world, cities have been the epicentres of COVID-19 (coronavirus). The virus has spread to virtually all parts of the world; first, among globally connected cities, then through community transmission and from the city to the countryside. This report shows that the intrinsic value of sustainable urbanization can and should be harnessed for the wellbeing of all. It provides evidence and policy analysis of the value of urbanization from an economic, social and environmental perspective. It also explores the role of innovation and technology, local governments, targeted investments and the effective implementation of the New Urban Agenda in fostering the value of sustainable urbanization.

This informative book is a thoroughly revised and updated edition of the classic introduction to urbanization in developing areas. Using case studies of cities drawn from around the world, including Bangkok, Delhi, Manila, Mexico City, Singapore and cities in Zimbabwe, this key text confronts three main questions: Is there still a Third World, does it have a common urban form, and what is the relationship between urbanization and sustainability? The text analyzes: the dimension of urban growth in the third world historical perspectives on urban growth urban population growth employment and incomes in the city basic needs and human rights environmental problems in third world cities planning and management of cities. Containing a wealth of student-friendly features including boxed case-studies, discussion questions and guides for further reading, this text provides an invaluable introduction to the issues and processes of the city in the Third World. Containing a greater depth of content and referencing, and with new chapters and subjects covered, this new second edition utilizes its larger format to make extensive use of illustrations, diagrams, global case studies, and further reading.

Overall, these changes have contributed to this book's continuance as an extremely accessible student text.

For the first time in human history more people now live in towns and cities than in rural areas. In the wealthier countries of the world, the transition from predominantly rural to urban habitation is more or less complete. But in many parts of Africa, Asia and Latin America, urban populations are expanding rapidly. Current UN projections indicate that virtually all population growth in the world over the next 30 years will be absorbed by towns and cities in developing countries. These simple demographic facts have profound implications for those concerned with understanding and addressing the pressing global development challenges of reducing poverty, promoting economic growth, improving human security and confronting environmental change. This revised and expanded second edition of Cities and Development explores the dynamic

relationship between urbanism and development from a global perspective. The book surveys a wide range of topics, including: the historical origins of world urbanization; the role cities play in the process of economic development; the nature of urban poverty and the challenge of promoting sustainable livelihoods; the complexities of managing urban land, housing, infrastructure and urban services; and the spectres of endemic crime, conflict and violence in urban areas. This updated volume also contains two entirely new chapters: one that examines the links between urbanisation and environmental change, and a second that focuses on urban governance and politics. Adopting a multidisciplinary perspective, the book critically engages with debates in urban studies, geography and international development studies. Each chapter includes supplements in the form of case studies, chapter summaries, questions for discussion and suggested further readings. The book is targeted at upper-level undergraduate and graduate students interested in geography, urban studies and international development studies, as well as policy makers, urban planners and development practitioners.

A moving, recognizable look at life on lockdown and the effect the coronavirus pandemic had across the world—because every city had a story to tell, and at the end of it all, we were all in it together. In the past year, hospitals filled, highways and subways emptied, landmarks and parks were deserted, our healthcare workers became increasingly fatigued and frustrated, and nearly all human activity paused. In photographs, The Great Wall and The Colosseum look photoshopped, with no tourists in sight. This book is unique in that it creates a visual narrative to document that emptiness as a way to reflect and to find solace amid the shock. A year later, it's something we've all seen and can relate to. This is a stunning collection of the abandoned and austere sights of fifteen major cities throughout the world during the peak outbreak of COVID-19. With their fine art backgrounds and through their network of professional photographers, Julie and Jeffrey Loria worked together to capture the unprecedented lockdown conditions worldwide. The photos show a range of emotions from the physical and psychological weight of caskets being carried to a Rio cemetery, to the completely empty and eerie Times Square and Rodeo Drive, to the patriotic pride in Rome's t-shirt display honoring their Italian flag colors as a symbol of hope. The photographs are not only a reminder of the harrowing pandemic that hushed some of the world's greatest urban streets, but also proof that across the globe, we were all in this together. Beneath the somberness in these images, there is a hint of beauty amid the stillness, but most of all, there is the presence of hope and promise that we will thrive again. Cities featured include: New York Jerusalem Boston Tokyo Paris Los Angeles Rome Rio de Janeiro San Francisco Washington, DC London Miami Tel Aviv Madrid Chicago

Ô This is vintage Allen Scott, but also a tour d'horizon of the state of urban studies, 2012, by one of its foremost global practitioners: compulsory reading. Ô Ð Peter Hall, University College London, UK Ô In this book, Allen Scott enriches his longstanding research into the ways in which city-regions function as the main economic engines of global capitalism. The end result is a seminal synthesis of how city-regions are increasingly enchaind with one another in intensifying relations of competition and cooperation, and is a must-read for students and scholars alike. Ô Ð Ben Derudder, Monash University, Australia and Ghent University, Belgium Ô Scott's book is a remarkable treatment of the emerging global economy, weaving together the frontiers of technology and the ways in which labor is managed and surplus created with the cities of tomorrow. His book challenges conventional notions of the Ô global city Ô to provide a more nuanced account of the ways in which the emerging cultural Ð cognitive economy of the 21st century is producing urban landscapes. His conception of the city of tomorrow is informed by deep knowledge of the contemporary city around the world and provides the reader with the conceptual building blocks to re-frame how we think about urbanization now and in the future. Ô Ð Gordon L. Clark, University of Oxford, UK This innovative volume offers an in-depth analysis of the many ways in which new forms of capitalism in the 21st century are affecting and altering the processes of urbanization. Beginning with the recent history of capitalism and urbanization and moving into a thorough and complex discussion of the modern city, this book outlines the dynamics of what the author calls the third wave of urbanization, characterized by global capitalism's increasing turn to forms of production revolving around technology-intensive artifacts, financial services, and creative commodities such as film, music, and fashion. The author explores how this shift toward a cognitive and cultural economy has caused dramatic changes in the modern economic landscape in general and in the form and function of world cities in particular. Armed with cutting-edge research and decades of expertise, Allen J. Scott breaks new ground in identifying and explaining how the cities of the past are being reshaped into a complex system of global economic spaces marked by intense relationships of competition and cooperation.

Professors and students in areas such as geography, urban planning, sociology, and economics will find much to admire in this pioneering volume, as will journalists, policy-makers, and other professionals with an interest in urban studies.

Portraits of a Pandemic: 15 Cities Across the World

This study was the first systematically to cover those cities beyond the core that most clearly can be considered world cities: Bangkok, Cairo, Hong Kong, Jakarta, Johannesburg, Mexico City, Moscow, Mumbai, Sao Paulo, Seoul, Shanghai, and Singapore. Fourteen leading authorities from diverse backgrounds bring their expertise to bear on these cities across four continents and consider the major regional and global roles they play in economic, political, and cultural life. Conveying how these cities have followed various pathways to their present position, they offer multiple perspectives on the interplay of internal and external forces and demonstrate that any comprehensive discussion of world cities has to engage a multiplicity of perspectives. With an introduction by Josef Gugler and an afterword from Saskia Sassen, this substantial volume makes a major contribution to the world cities literature and provides an important impetus for further analysis.

Some cities seem destined to become major financial capitals, yet never do--Seville, for instance, was the centre of Spain's opulent New World Empire, but failed to become a financial metropolis. Others, like former colonial backwater Hong Kong, defy the odds by growing into major trading centres. What are the key factors distinguishing those cities that become wealthy from those that don't? Christopher Kennedy illuminates how geography, technology, and especially the infrastructure of urban economies allow cities to develop and thrive. The Evolution of Great World Cities unfolds through the tales of several urban centres--including Venice, Amsterdam, London, and New York City--at key junctures in their histories. Kennedy weaves together significant insights from urbanists such as Jane Jacobs and economists such as John Maynard Keynes, drawing striking parallels between the functioning of ecosystems and of wealthy capitals. The Evolution of Great World Cities offers an accessible introduction to urban economies that 'will change the way you think about cities.'

With the urbanization of the world's population proceeding apace and the equally rapid urbanization of poverty, urban theory has an urgent challenge to meet if it is to remain relevant to the majority of cities and their populations, many of which are outside the West. This groundbreaking book establishes a new framework for urban development. It makes the argument that all cities are best understood as 'ordinary', and crosses the longstanding divide in urban scholarship and urban policy between Western and other cities (especially those labelled 'Third World'). It considers the two framing axes of urban modernity and development, and argues that if cities are to be imagined in equitable and creative ways, urban theory must overcome these axes with their Western bias and that resources must become at least as cosmopolitan as cities themselves. Tracking paths across previously separate literatures and debates, this innovative book - a postcolonial critique of urban studies - traces the outlines of a cosmopolitan approach to cities, drawing on evidence from Rio, Johannesburg, Lusaka and Kuala Lumpur. Key urban scholars and debates, from Simmel, Benjamin and the Chicago School to Global and World Cities theories are explored, together with anthropological and developmentalist accounts of poorer cities. Offering an alternative approach, Ordinary Cities skilfully brings together theories of urban development for students and researchers of urban studies, geography and development.

'The Book of Cities' is an inspirational gazetteer of 250 cities of all shapes, sizes and moods. Each city is presented in longitudinal order, so, like a contemporary Phileas Fogg, this round-the-world trip sets out from and returns to the Greenwich Meridian. Heading due west from London it visits the Americas and beyond. The book not only contains all the great metropolises, Paris, Rome, New York, Tokyo, but also those lesser known: Nuuk in Greenland, the smallest city in the world; Cordoba, an ancient city of trade and learning. There are cities at the end of the world, such as Anchorage in Alaska, and sites of pilgrimage, whether for sacred or sentimental reasons: Jerusalem or Memphis, Tennessee. Thought-provoking photographs portray the essence of every city. These are accompanied by lively, funky text that captures the vibe and soul of the place. Additional insights are provided by wise and wry quotes from residents and visitors. Useful data accompanies each entry, such as the longitude and latitude, altitude and population. This book may well inspire a first visit, refresh the memories of the well travelled, or simply fire the armchair imagination.

A World of Cities

*The pivotal nodes in the world city network are global cities---cities of supreme strategic value in global economy and politics, science and technology, culture, and society. Global*

*Cities: Past, Present and Future* explores the evolution of global cities--their formation, rise, development and tendencies. This book summarizes and interprets global tendencies and also puts forward a theoretical framework that will help researchers understand these cities better. It also makes a compelling case for understanding every city in terms of evolutionary dynamics. The first eight chapters of the book discuss the ontology of global city evolution and patterns, forms and trends of development. The last two chapters study the case of Shanghai, which aims to build itself into an important global city by 2050. This case study illustrates the shaping of a new type of global city that demonstrates new characteristics of the globalized space.

Of all the cities in the world today, there are however, only a few that leave a strong impression on those who visit them. These are the ones that have a rich architectural heritage or a spectacular natural environment. But above all, they have a vitality that makes them unique. They are cities that know how to grow, transform and reinvent themselves without losing their essence. This book takes you on a journey through 30 such cities throughout the world. Annotated 3D reconstructions and cutaway models allow you to journey right into the heart of each of them, and feel the heartbeat of some of the most vibrant and exciting urbanized centres in the world.

*Cities in a World Economy* examines the emergence of global cities as a new social formation. As sites of rapid and widespread developments in the areas of finance, information and people, global cities lie at the core of the major processes of globalization. The book features a cross-disciplinary approach to urban sociology using global examples, and discusses the impact of global processes on the social structure of cities. The Fifth Edition reflects the most current data available and explores recent debates such as the role of cities in mitigating environmental problems, the global refugee crisis, Brexit, and the rise of Donald Trump in the United States.

For millennia, urban centers were pivots of power and trade that ruled and linked rural majorities. After 1950, explosive urbanization led to unprecedented urban majorities around the world. That transformation--inextricably tied to rising globalization--changed almost everything for nearly everybody: production, politics, and daily lives. In this book, seven eminent scholars look at the similar but nevertheless divergent courses taken by Mexico City, Rio de Janeiro, Buenos Aires, Montreal, Los Angeles, and Houston in the twentieth century, attending to the challenges of rapid growth, the gains and limits of popular politics, and the profound local effects of a swiftly modernizing, globalizing economy. By exploring the rise of these six cities across five nations, *New World Cities* investigates the complexities of power and prosperity, difficulty and desperation, while reckoning with the social, cultural, and ethnic dynamics that mark all metropolitan areas. Contributors: Michele Dagenais, Mark Healey, Martin V. Melosi, Bryan McCann, Joseph A. Pratt, George J. Sanchez, and John Tutino.

*World Tourism Cities: A Systematic Approach to Urban Tourism* is a unique and contemporary textbook that addresses the particular situation of urban tourism destinations in the 2020s by reviewing key issues, trends, challenges and future opportunities for urban tourism destinations worldwide, as well as city destination management. The book is divided into four parts, with Part I providing background chapters on world tourism cities. It begins by clearly defining world tourism cities and explaining the impacts of globalisation on these cities. The subsequent chapter explains the urban tourism phenomenon and traces its growth. Part II presents city destination management, planning, development and the marketing and branding of cities, offering practical solutions and approaches. Part III discusses major issues and trends in world tourism cities in terms of resident well-being and quality of life, sustainability, smart tourism, crises and the rise of tourism in Asian cities, and the final part identifies the future opportunities for urban tourism. Written in a student-friendly tone, the book is richly illustrated and contains several engaging features, including Sweet tweets (snippets of information on cities) and Detailed case studies (detailed case studies on cities). This will be essential reading for all tourism students.

The force of globalization is making cities change all around the world. Short's study explores how the discourse of globalization has become a major narrative in the re-imagining of cities in many parts of the world.

Since the late eighteenth century, academic engagement with political, economic, social, cultural and spatial changes in our cities has been dominated by theoretical frameworks crafted with reference to just a small number of cities. This book offers an important antidote to the continuing focus of urban studies on cities in 'the Global North'. *Theory Beyond the West* contains twenty chapters from leading scholars, raising important theoretical issues about cities throughout the world. Past and current conceptual developments are reviewed and organized into four parts: 'De-centring the City' offers critical perspectives on re-imagining urban theoretical debates through considering the diversity and heterogeneity of city life; 'Order/Disorder' focuses on the political, physical and everyday ways in which cities are regulated and used in ways that challenge ordering; 'Mobilities' explores the movements of people, ideas and policy in cities and between them and 'Imaginaries' investigates how urbanity is differently perceived and experienced. There are three kinds of chapters published in this volume: theories generated about urbanity 'beyond the West'; critiques, reworking or refining of 'Western' urban theory based upon conceptual reflection about cities from around the world and hybrid approaches that develop both of these perspectives. *Urban Theory Beyond the West* offers a critical and accessible review of theoretical developments, providing an original and groundbreaking contribution to urban theory. It is essential reading for

and practitioners interested in urban studies, development studies and geography.

Smaller Cities explores the advantages and disadvantages of different sized cities, trying to determine their place in the global economy and hierarchy. In a globalized world, the nation has perhaps been diminished as an economic actor, with fiscal shortcomings and political gridlock leaving cities more or less on their own in the task of enhancing their competitiveness and improving the economic lives of their residents. This book argues that smaller cities of varying population can be important actors in competitiveness and aims to bring attention to an area often overlooked by researchers. When living and working in cities, we need to make sense of them in order to get by. We must delve below their surface to understand what makes them tick and how we can best engage with them. This book argues that three tropes can help us: namely, metaphors, icons and perspectives. Metaphorically, we can see the city as a community, a battleground, a marketplace, a machine or an organism. Some cities are iconic; they present us with characteristics that are more generally true of cities and city life, such as Venice, Mumbai, New York, Tokyo, Paris and Los Angeles. Cities can also be viewed from different perspectives: those of artists, analysts, rulers and citizens. This book explores these ways of understanding cities, drawing on rich accounts of cities across the world and through time.

World Cities and Nation States takes a global perspective to show how national governments and states/provinces/regions continue to play a decisive, and often positive, partnership role with world cities. The 16 chapter book is comprised of two introductory chapters, 12 central chapters that draw on case studies, and two summary chapters – draws on over 40 interviews with national ministers, city government officials, business leaders and expert academics.

When the book was first published in 1986 it was one of only a few to offer systematic comparative analyses of developing world cities, and those stemming from different regions, with examples from different continents in each chapter.
