complex realities of twenty-first-century urban life as they try to balance their needs with their belief in God. Through the course of a year, these women must come to terms with the past, discover their true identities, and recognize the unexpected miracles that reveal God's all-encompassing love. These four women entertain us and invite us to join in their lives. As they welcome us, they also introduce us to the men in their

The book reports on advanced topics in the areas of wearable robotics research and practice. It focuses on new technologies, including neural interfaces, soft wearable robots, sensors and actuators technologies, and discusses important regulatory challenges, as well as clinical and ethical issues. Based on the 4th International Symposium on Wearable Robotics, WeRob2018, held October 16-20, 2018, in Pisa, Italy, the book addresses a large audience of academics and professionals working in government, industry, and medical centers, and end-users alike. It provides them with specialized information and with a source of inspiration for new ideas and collaborations. It discusses exemplary case

studies highlighting practical challenges related to the implementation of wearable robots in a number of fields. One of the focus is on clinical applications, which was encouraged by the colocation of WeRob2018 with the International Conference on Neurorehabilitation, INCR2018. Additional topics include space applications and assistive technologies in the industry. The book merges together the engineering, medical, ethical and political perspectives, thus offering a multidisciplinary, timely snapshot of the field of wearable technologies.

Nanostructures for Antimicrobial and Antibiofilm Applications

This publication is the outcome of work of the UNECE Group of Experts on Euro-Asian Transport Links (EATL) in phase III of the project (2013-2017). The report was drafted by a consultant from the Scientific and Research Institute of Motor Transport (NIIAT) in Moscow and is focused both at coordination and facilitation of financing of infrastructural

projects, as well as facilitating and removing physical and administrative bottlenecks at border crossings in overland transport between Europe and Asia. The report is a particularly useful tool for transport policy-makers from Landlocked Developing Countries (LLDCs) and transit countries in the Euro-Asian region and beyond, in that it, inter alia: i) Identifies and describes main commodity groups

for the transport of which inland modes of transport can compete with maritime and aviation modes (incl. non-containerized, containerized and high-value containerized cargo); ii) Provides analysis showing the economic advantage (in terms of time and costs) of inland routes compared to air or maritime routes; and iii) Identifies the current strengths and weaknesses and lists several recommendations

to make inland routes more competitive vis-à-vis the other modes. The EATL project's principal value to the market is that it paved the way for the operation of container "block trains". The development of the block trains, the so called "highways of railways" made the Euro-Asian corridors operational, serving as a regular mechanism controlled by the market that evaluates the service levels and requests for greater

A destitute tenant farmer, in Pyung Yang, Korea, gives away his twelve year old son to the nationalist patriot, Doh Sahn, in 1908. Following the ardent Patriot, thrusts the teenager into the midst of an international struggle raging in the Korean Peninsula. Japan proceeds to annex Korea into the Japanese Empire. The Patriot fights to thwart the annexation. As the Japanese police close in, the Patriot and the teenager escape to Tsingtao and Vladivostok; the two finally reach New York in 1911, as Korea is no more. The teenager struggles alone to survive in America, and enters Asbury College in Kentucky. Rev. Robert Nahm-Soo Chung in 1926 returns to his homeland. American forests come to life as native wildflowers start to push up through patches of snow. With longer days and sunlight streaming down through bare branches of towering trees, life on the forest floor awakens from its winter sleep.

Plants such as green dragon, squirrel corn, and bloodroot interact with their pollinators and seed dispersers and rush to create new life before the trees above leaf out and block the sun's rays. major cause of morbidity and mortality. The ability of bacterial pathogens to form biofilms further agglomerates the situation by showing resistance to conventional antibiotics. To overcome this serious issue, bioactive metabolites and other natural products were exploited to combat bacterial infections and biofilm-related health consequences. Natural products exhibited promising results in vitro, however; their efficacy in in vivo conditions remain obscured due to their low-solubility, bioavailability, and biocompatibility issues. In this scenario, nanotechnological interventions provide a multifaceted platform for targeted

resistance against a variety of phytopathogens therefore plays crucial role in growth and crop productivity. Also the advent of smart and hybrid nanomaterials such as metal-based polymer nanocomposites, lipid-based nanomaterials and liposomes have the inherent potential to eradicate bacterial biofilm-related infections in an efficient manner. The recent development of carbon-based nanomaterials such as carbon nanotubes (CNTs) and silica based nanomaterials such as mesoporous silica nanoparticles (MSNs) also exploit a target of dreadful healthcare conditions such as cancer, immunomodulatory diseases, and microbial infections,
