Abnormal Psychology: An Integrative Approach

Perspectives

The third edition of Introduction to Clinical Psychology: An Evidence-Based Approach by University of Ottawa authors John Hunsley and Catherine M. Lee introduces students to the theories and practices of clinical psychology and conveys the important work done by clinical psychologists. This text is designed

to be helpful not only to those who will go on to careers in clinical psychology, but also to those who will choose other career paths.

Case Studies in Abnormal Psychology presents a broad range of cases drawn from the clinical experience of authors Kenneth N. Levy, Kristen M. Kelly, and William J. Ray to take readers beyond theory into real-life situations. The authors take a holistic approach by including multiple perspectives and considerations, apart from those of just the patient. Each chapter follows a consistent format: Presenting Problems and Client Description; Diagnosis and Case Formulation; Course of Treatment; Outcome and Prognosis/Treatment Follow-up; and Discussion Questions. Providing empirically supported treatments and long-term follow-up in many case studies gives students a deeper understanding of each psychopathology and the effects of treatment over time.

The developmental trajectory of each condition is discussed where appropriate and scientific findings with respect to race and gender are incorporated into discussions about each condition. Biological findings are integrated with findings from social and behavioral sciences, highlighting the complexity of abnormal behavior and how it is often influenced by a wide range of variables. The authors encourage students to look at psychological disorders along a continuum and analyze disorders in terms of whether the individual's behavior creates distress or impairs daily functioning. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors. "This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by

their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

This is a concise textbook on abnormal psychology that integrates various theoretical models, sociocultural factors, research, clinical experiences, and therapies. The author encourages critical thinking about the science and study of mental disorders and also reveals the humanity behind them. Through a thoughtful and accurate balance of developmental, clinical-diagnostic, and experimental approaches to child and adolescent psychopathology, Eric Mash and David Wolfe's ABNORMAL CHILD PSYCHOLOGY remains the most authoritative, scholarly, and comprehensive book in its market. Accessible to a broad range of readers, the book traces the developmental course of each disorder and shows how biological, psychological, and sociocultural factors interact with a child's environment. Case histories, case examples, and first-person accounts are at the heart of the text, illustrating the categorical and dimensional approaches used to describe disorders and bringing life to the theories discussed. The authors also consistently illustrate how troubled children behave in their natural settings: homes, schools, and communities. Up-to-date and forward-looking, the text covers the DSM-IV-TR and dimensional approaches to classification as well as evidence-based assessment and treatment, contemporary research, and the latest theories related to the predominantly inattentive ADHD subtype, early-onset and the developmental propensity model of conduct disorder, the triple vulnerability model of anxiety, the tripartite model in children, depression, and autism.
