Using cases from the authors' files or from case files of other working clinicians, CASEBOOK IN ABNORMAL PSYCHOLOGY, International Edition portrays the rich and arresting nature of disorders manifested in real people. Cases illustrate every major DSM-IV category, followed by a therapy outcome section that tells the "rest of the story" of what happened to these clients. Using an integrative approach, the authors emphasize the multiple causes of disorders and incorporate developmental and cultural issues in each case. Complex cases are presented

research, the text introduces and integrates the Multipath Model of Mental Disorders to explain how biological, psychological, social, and sociocultural factors interact to cause mental disorders. A focus on resilience highlights prevention and recovery from the symptoms of various disorders, and the book also continues its emphasis on the multicultural, sociocultural, and diversity aspects of abnormal psychology. The authors present material in a lively and engaging manner, connecting topics to real-world case studies, current events, and issues of particular importance and relevance to college students.

This exciting version was created specifically for those professors who were drawn to the approach the authors introduced in their longer text, *Abnormal Psychology: An Integrative Approach* (see page 78), but wanted a bit less detail. In this briefer version, you'll find -- in 500 pages -- a consistent organizational structure that makes the material easy to learn, fascinating real-life cases integrated into the flow of each chapter, a mix of clinical and scientific approaches, and a variety of built-in study aids designed to

Throughout the briefer version -- as in their groundbreaking original text -- the authors provide students with an integration of research on the biological, psychological, and social aspects of abnormal behavior and its treatment. The result is an exciting journey into the minds of people with psychological disorders, a journey that celebrates the multifaceted roles of biological as well as psychosocial influences and at the same time recognizes that these influences work together. This breakthrough book offers professors and students a more authentic, personal, and thoroughly scientific picture of what psychological disorders are and how they can be assessed and managed. Unlike the piecemeal "single-cause, single treatment" model offered in other abnormal psychology texts, Barlow and Durand demonstrate that disorders are determined by multiple forces: biological, psychological, social,

cultural, familial, and political forces, the only approach that today's scientists would subscribe to. Writing in narrative, forceful prose, the authors challenge readers to think about how and why people become troubled and what is done to help them. Throughout the book, Barlow and Durand masterfully integrate concepts with case examples and citations from the literature to demonstrate the connection between research and practice. And, because in contemporary thinking therapy cannot be viewed separately from the disorder, the latest
