From one of the nation's preeminent experts on women and emotion, a breakthrough new book about how to stop negative thinking and become more productive It's no surprise that our fast-paced, overly self-analytical culture is pushing many people—especially women—to spend countless hours thinking about negative ideas, feelings, and experiences. Renowned psychologist Dr. Susan Nolen-Hoeksema calls this overthinking, and her groundbreaking research shows that an increasing number of women—more than half of those in her extensive study—are doing it too much and too often, hindering their ability to lead a satisfying life. Overthinking can be anything from fretting about the big questions such as "What am I doing with my life?" to losing sleep over a friend's innocent comment. It is causing many women to end up sad, anxious, or seriously depressed, and Nolen-Hoeksema challenges the assumption—heralded by so many pop-psychology pundits of the last several decades—that constantly expressing and analyzing our emotions is a good thing. In *Women Who Think Too Much*, Nolen-Hoeksema shows us what causes so many women to be overthinkers and provides concrete strategies that can be used to escape these negative thoughts, move to higher ground, and live more productively. *Women Who Think Too Much* will change lives and is destined to become a self-help classic.

The casebook provides 17 additional case histories based on the authors' clinical experiences, each going beyond DSM-IV diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a specific treatment plan, and the actual treatment conducted. The casebook also provides 3 cases without diagnosis or treatment, so students can identify disorders and suggest appropriate therapies.

"The eighth edition of Susan Nolen-Hoeksema's *Abnormal Psychology* continues her mission to create a program that blends the most contemporary research on psychological disorders with compassion for those who live with these disorders. *Abnormal Psychology* personalizes the human experience, while helping students think critically and apply their knowledge through activities in McGraw-Hill Education's digital learning platform, *Connect*."--

Written for an audience that includes private practitioners; counselors working in mental health centers, psychiatric hospitals, employee assistance programs, and other community settings; as well as counselor educators and their students, this helpful guide breaks down the concepts and terminology in the DSM-5 and explains how this diagnostic tool translates to the clinical situations encountered most frequently by counselors. After describing the major structural, philosophical, and diagnostic changes in the DSM-5, the book is organized into four parts, which are grouped by diagnostic similarity and relevance to counselors. Each chapter outlines the key concepts of each disorder, including major diagnostic changes; essential features; special considerations; differential diagnosis; coding, recording, and specifiers; and, where applicable, new or revised criteria. Clinical vignettes help both clinicians and students visualize and understand DSM-5 disorders. Studyguide for Abnormal Psychology by Nolen-Hoeksema, Susan

The Handbook of Bereavement Research provides a broad view of diverse contemporary approaches to bereavement, examining both normal adaptation and complex manifestations of grief. In this volume, leading interdisciplinary scholars focus on 3 important themes in bereavement research: consequences, coping, and care. In exploring the consequences of bereavement, authors examine developmental factors that influence grief both for the individual and the family at different phases of the life cycle. In exploring coping, they describe new empirical studies about how people can and do cope with grief, without professional intervention. Until recently, intervention for the bereaved has not been scientifically guided and has become the subject of challenging differences of opinion and approach. Chapters in the care section of the volume critically examine interventions to date and provide guidance for assessment and more theoretically and empirically guided treatment strategies. The Handbook provides an up-to-date comprehensive review of scientific knowledge about bereavement in an authoritative yet accessible way that will be essential reading for researchers, practitioners, and health care professionals in the 21st century. Women are twice as likely as men to experience protracted sadness, apathy, low self-esteem, and other symptoms of depression. How can we account for this sex difference? Several explanations have been proposed, some dating back many years. This book critically examines the evidence for each explanation in an attempt to discover what we do and do not know about sex differences in depression. It is a landmark review of the historical, theoretical and empirical approaches to sex differences in depression. Rumination (recyclic negative thinking), is now recognised as important in the development, maintenance and relapse of recurrence of depression. For instance, rumination has been found to elevate, perpetuate and exacerbate depressed mood, predict future episodes of depression, and delay recovery during cognitive therapy. Cognitive therapy is one of the most effective treatments for depression. However, depressive relapse and recurrence following cognitive therapy continue to be a significant problem. An understanding of the psychological processes which contribute to relapse and recurrence may guide the development of more effective interventions. This is a major contribution to the study and treatment of depression which reviews a large body of research on rumination and cognitive processes, in depression and related disorders, with a focus on the implications of this knowledge for treatment and clinical management of these disorders. * First book on rumination in depressive and emotional disorders * Contributors are the leaders in the field * First editor is a rising researcher and clinician with specialist interest in depression, and second editor is world renowned for his work on cognitive therapy of emotional disorders
