The decision of whether to go to college, or where, is hampered by poor information and inadequate understanding of the financial risk involved. Adding to the confusion, the same degree can cost dramatically different amounts for different people. A barrage of advertising offers new degrees designed to lead to specific jobs, but we see no information on whether graduates ever get those jobs. Mix in a frenzied applications process, and pressure from politicians for "relevant" programs, and there is an urgent need to separate myth from reality. Peter Cappelli, an acclaimed expert in employment trends, the workforce, and education, provides hard evidence that counters conventional wisdom and helps us make cost-effective choices. Among the issues Cappelli analyzes are: What is the real link between a college degree and a job that enables you to pay off the cost of college, especially in a market that is in constant change? Why it may be a mistake to pursue degrees that will land you the hottest jobs because what is hot today is unlikely to be so by the time you graduate. Why the most expensive

colleges may actually be the cheapest because of their ability to graduate students on time. How parents and students can find out what different colleges actually deliver to students and whether it is something that employers really want. College is the biggest expense for many families, larger even than the cost of the family home, and one that can bankrupt students and their parents if it works out poorly. Peter Cappelli offers vital insight for parents and students to make decisions that both make sense financially and provide the foundation that will help students make their way in the world.

Management Information Systems

Accounting Demystified

**The revolutionary effects of using accounting information systems by displacing manual information systems in the private and public sectors cannot be overstated. The benefits of this substitution of set of processes include increased mathematical accuracy, predefined fields and coding tasks, and de-emphasis of manual clerical labor in favor of labor adept in data processing. Reporting can be significantly automated, facilitating managerial power and control at a distance and the proliferation of global enterprises. The potential detriments are rarely accurately, completely, and timely addressed as information system vendors, management consultants, and corporate procurement teams race toward the popularly conceived state of the art. Systems are ballyhooed as continually improving in processing speed, functionality, and capacity. Users of these automated systems may not consider big picture effects, and they may not intelligently consider the conduct risks to their own enterprises by concentrating such global reach and influence at high levels of senior management without dedicating adequate resources to verifying the accuracy, completeness, and timeliness of the information systems. This book considers these risks.**

*Accounting Information Systems provides a comprehensive knowledgebase of the systems that generate, evaluate, summarize, and report accounting information. Balancing technical concepts and student comprehension, this textbook introduces only the most-necessary technology in a clear and accessible style. The text focuses on business processes and accounting and IT controls, and includes discussion of relevant aspects of ethics and corporate governance. Relatable real-world examples and abundant end-of-chapter resources reinforce Accounting Information Systems (AIS) concepts and their use in day-to-day operation. Now in its fourth edition, this popular textbook explains IT controls using the AICPA Trust Services Principles framework—a comprehensive yet easy-to-understand framework of IT controls—and allows for incorporating hands-on learning to complement theoretical concepts. A full set of pedagogical features enables students to easily comprehend the material, understand data flow diagrams and document flowcharts, discuss case studies and examples, and successfully answer end-of-chapter questions. The book's focus on ease of use, and its straightforward presentation of business processes and related controls, make it an ideal primary text for business or accounting students in AIS courses.*

*Intended for a one-semester course in Accounting Information Systems taught at the sophomore, junior, or senior level at most two- and four-year schools. This revision is completely streamlined, includes new pedagogy, and is accompanied by a CD-ROM containing added coverage, making it flexible enough to suit a variety of different approaches to the course.*

*IS AUDITING is an innovative and cutting edge product, which provides students an understanding of how to audit accounting information systems, including such new and expanded coverage of enterprise systems, fraud and fraud detection topics as continuous online auditing. Its organization and its integration of ACL software within the package ensure a solid background in traditional auditing as well as in the auditing of accounting information systems. The combination of text and software create a double learning environment in which students will gain a true understanding of how these audits take place in the real world.*

This book explores the creation of imperial identities in Britain and several of its colonies - South Africa, India, Australia, Wales - and the ways in which the Victorian press around the world shaped and reflected these identities. The concept of co-histories, borrowed from Edward Said and Frantz Fanon, helps explain how the press shaped the imperial and national identities of Britain and of the colonies into co-histories that were thoroughly intertwined and symbiotic. Exploring a variety of press media, this book argues that the press was a site of resistance and revision by colonized authors and publishers, as well as a force of colonial authority for the British government. editors, and publishers, who projected a view of the empire to their British, colonial, and colonized readers.

Topics include The Journal of Indian Art and Industry produced by the British art schools in India, women's periodicals, Indian writers in the British press, The Imperial Gazetteer published in Scotland, the rise of telegraphic news agencies, the British press's images of China seen through exhibitions of its art, the Tory periodical Blackwood's Magazine, and the Imperial Press Conference of 1909.

The second half of the twentieth century saw the University of Pennsylvania grow in size as well as in stature. On its way to becoming one of the world's most celebrated research universities, Penn exemplified the role of urban renewal in the postwar redevelopment and expansion of urban universities, and the indispensable part these institutions played in the remaking of American cities. Yet urban renewal is only one aspect of this history. Drawing from Philadelphia's extensive archives as well as the University's own historical records and publications, John L. Puckett and Mark Frazier Lloyd examine Penn's rise to eminence amid the social, moral, and economic forces that transformed major public and private institutions across the nation. Becoming Penn recounts the shared history of university politics and urban policy as the

campus grappled with twentieth-century racial tensions, gender inequality, labor conflicts, and economic retrenchment. Examining key policies and initiatives of the administrations led by presidents Gaylord Harnwell, Martin Meyerson, Sheldon Hackney, and Judith Rodin, Puckett and Lloyd revisit the actors, organizations, and controversies that shaped campus life in this turbulent era. Illustrated with archival photographs of the campus and West Philadelphia neighborhood throughout the late twentieth century, *Becoming Penn* provides a sweeping portrait of one university's growth and impact within the broader social history of American higher education.
