The world economy in which we are living poses challenges that lead to a realization that 'more of the same' will be difficult to sustain. This provides an illustration that, in order to create new or modified knowledge practices, strengthen customer relationships and thus positively influence customer satisfaction, organizations must be flexible in configuring (combining) knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning (forgetting) becomes a critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning and knowledge management. How can organizations tailor, use, and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management (KM) and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business, management and organization science as well as cognitive science. Emphasis will be put on systematic learning from experience, KM tools and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight (i.e., do not place considerable additional burden on users and KM experts), allow an incremental adoption (i.e., do not require large up-front investment before any return of investment is at least visible), and are flexible regarding frequent changes in experts and topics. Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge-intensive organizations.

Economic Effects of Natural Disasters explores how natural disasters affect sources of economic growth and development. Using theoretical econometrics and real-world data, and drawing on advances in climate change economics, the book shows scholars and researchers how to use various research methods and techniques to investigate and respond to natural disasters. No other book presents empirical frameworks for the evaluation of the quality of macroeconomic research practice with a focus on climate change and natural disasters. Because many of these subjects are so large, different regions of the world use different

approaches, hence this resource presents tailored economic applications and evidence. Connects economic theories and empirical work in climate change to natural disaster research Shows how advances in climate change and natural disaster research can be implemented in micro- and macroeconomic simulation models Addresses structural changes in countries afflicted by climate change and natural disasters

2014 International Conference on Education and Management Science (ICEMS2014) will be held in Beijing, China on August 19-20, 2014. The main purpose of this conference is to provide a common forum for researchers, scientists, and students from all over the world to present their recent findings, ideas, developments and application in the border areas of Education and Management Science. It will also report progress and development of methodologies, technologies, planning and implementation, tools and standards in information systems. Education is an internal topic. It is a process of delivering knowledge in a basic meaning. Humans are hard to define the actual definition of education. But it is the key point for our society to step forward. Management science is the discipline that adapts the scientific approach for problem solving to help managers making informed decisions. The goal of management science is to recommend the course of action that is expected to yield the best outcome with what is available.

In spite of the day-to-day relevance of business communication, it remains underrepresented in standard handbooks and textbooks on applied linguistics. The present volume introduces readers to a wide variety of linguistic studies of business communication, ranging from traditional LSP approaches to contemporary discourse-based work, and from the micro-level of lexical choice to macro-level questions of language policy and culture.

In a conceptually current, quick-reference, Question & Answer format - Tulsian's Quick Revision for Corporate Financial Reporting is a practically illustrated self-study handbook. In line with exam pattern and weightage, the book includes practice questions on almost all the topics which are immensely helpful for last minute revision.

The exploding use of derivatives in the last two decades has created a major challenge for tax authorities, who had to develop appropriate derivatives taxation rules that strike a balance between allowing capital markets to function effectively by removing artificial tax barriers and at the same time protecting their countries' tax base from tax avoidance schemes that utilise these instruments. Derivatives exist in a vast variety and complexity and new forms or combinations of existing forms appear ad hoc as new risk categories emerge and companies seek to invest in or hedge these risks. This very thorough book discusses and analyses taxation issues posed by derivatives used in domestic as well as in cross-border transactions. In great detail the

author presents approaches that can be adopted by tax legislators to solve these problems, clarifying her solutions with specific reference to components of the two most important domestic tax systems in relation to derivatives in Europe, those of the United Kingdom and Germany. Examples of derivatives transactions and arbitrage schemes greatly elucidate the nature of derivatives and how they can be effectively taxed. The following aspects of the subject and more are covered: - basic economic concepts in the context of derivatives such as replication, put-call-parity, hedging and leverage; - designing a suitable definition of derivatives in domestic tax law; - achieving coherence in domestic tax rules by applying a 'special regime approach' versus an 'integrative approach' and the distinction of income and capital, equity and debt; - alignment of accounting standards and taxation rules and the application of fair value accounting for tax purposes; - how to tax hedged positions and post-tax hedging schemes; - taxation of structured financial products and hybrid instruments with focus on bifurcation and integration approaches and the recent BEPS discussion drafts on hybrid mismatch arrangements; - refining the 'beneficial ownership' - concept in domestic law and in tax treaties and an analysis of recent case law; - withholding taxes in the context of domestic and cross-border dividend tax arbitrage schemes; and - tackling derivatives tax arbitrage effectively in anti-avoidance legislation. By providing an in-depth analysis of corporate taxation issues that arise in domestic as well as in cross-border derivatives transactions, this book is not only timely but of lasting value in the day-to-day work of tax lawyers and tax professionals in companies, banks and funds, and is sure to be of interest to government officials, academics and researchers involved with financial instruments taxation.
