The History of

Wild's Managerial Accounting
presents the managerial
accounting course content
using a corporate approach.
It features the same student-
friendly writing style and
learning tools that have
enjoyed consistent success
with students and
instructors using other
texts in the Wild series.
Also consistent with this

series is Managerial Accounting's focus on the "Three C's": Clear presentation of accounting concepts, Concise coverage to help students focus on important material, Cutting edge technology to engage students and improve their chances for success. The author provides a balance of small and leaf. Global in scope, accounting has had its share of great thinkers and practitioners, from Luca Paciolo, the father of accounting, to R. J. Chambers, W. W. Cooper, Yuji Ijiri, Stephen A. Zeff and other figures. This encyclopedia presents more than 400 entries that focus

on such subjects as publications in the field, institutional bodies, accounting and economic concepts, accounting issues, authors in accounting, records, leaders in the profession, accounting in various countries, financial court cases, accounting exams and historical researchers.

This book is an invitation to study managerial uses of accounting information. Three themes run throughout. First, the accounting system is profitably thought of as a library of financial statistics. Answers to a variety of questions are unlikely to be found in

prefabricated format, but valuable information awaits those equipped to in the accounting library is most interrogate the library. Second, the information unlikely to be the only information at the manager's disposal. So knowing how to combine accounting and nonaccounting bits of information is an important, indeed indispensable, managerial skill. Finally, the role of a professional manager is emphasized. This is an individual with skill, talent, and imagination, an individual who brings professional quality skills to the task of managing. This book also makes demands

on the reader. It assumes the reader has had prior exposure to financial accounting, economics, statistics, and the economics of uncertainty (in the form of risk aversion and decision trees). A modest acquaintance with strategic, or equilibrium, modeling is also presumed, as is patience with abstract notation. The book does not make deep mathematical demands on the reader. An acquaintance with linear programming and the ability to take a simple derivative are presumed. The major prerequisite is a tolerance for (if not a predisposition toward)
